

# CUDA SAMPLES

TRM-06704-001\_v7.0 | March 2015

## Reference Manual

# TABLE OF CONTENTS

<b>Chapter 1. Release Notes.....</b>	<b>1</b>
1.1. CUDA 7.0.....	1
1.2. CUDA 6.5.....	2
1.3. CUDA 6.0.....	2
1.4. CUDA 5.5.....	3
1.5. CUDA 5.0.....	3
1.6. CUDA 4.2.....	4
1.7. CUDA 4.1.....	4
<b>Chapter 2. Getting Started.....</b>	<b>6</b>
2.1. Getting CUDA Samples.....	6
Windows.....	6
Linux.....	6
Mac OSX.....	6
2.2. Building Samples.....	7
Windows.....	7
Linux.....	7
Mac.....	8
2.3. CUDA Cross-Platform Samples.....	8
TARGET_ARCH.....	9
TARGET_OS.....	9
TARGET_FS.....	9
Copying Libraries.....	9
2.4. Using CUDA Samples to Create Your Own CUDA Projects.....	10
2.4.1. Creating CUDA Projects for Windows.....	10
2.4.2. Creating CUDA Projects for Linux.....	10
2.4.3. Creating CUDA Projects for Mac OS X.....	11
<b>Chapter 3. Samples Reference.....</b>	<b>13</b>
3.1. Simple Reference.....	13
asyncAPI.....	13
cdpSimplePrint - Simple Print (CUDA Dynamic Parallelism).....	14
cdpSimpleQuicksort - Simple Quicksort (CUDA Dynamic Parallelism).....	14
clock - Clock.....	15
clock_nvrtc - Clock libNVRTC.....	15
cppIntegration - C++ Integration.....	15
cppOverload.....	16
cudaOpenMP.....	16
inlinePTX - Using Inline PTX.....	16
inlinePTX_nvrtc - Using Inline PTX with libNVRTC.....	17
matrixMul - Matrix Multiplication (CUDA Runtime API Version).....	17
matrixMul_nvrtc - Matrix Multiplication with libNVRTC.....	17

matrixMulCUBLAS - Matrix Multiplication (CUBLAS).....	18
matrixMulDrv - Matrix Multiplication (CUDA Driver API Version).....	19
simpleAssert.....	19
simpleAssert_nvrtc - simpleAssert with libNVRTC.....	19
simpleAtomicIntrinsics - Simple Atomic Intrinsics.....	20
simpleAtomicIntrinsics_nvrtc - Simple Atomic Intrinsics with libNVRTC.....	20
simpleCallback - Simple CUDA Callbacks.....	20
simpleCubemapTexture - Simple Cubemap Texture.....	21
simpleIPC.....	21
simpleLayeredTexture - Simple Layered Texture.....	22
simpleMPI.....	22
simpleMultiCopy - Simple Multi Copy and Compute.....	22
simpleMultiGPU - Simple Multi-GPU.....	23
simpleOccupancy.....	23
simpleP2P - Simple Peer-to-Peer Transfers with Multi-GPU.....	23
simplePitchLinearTexture - Pitch Linear Texture.....	24
simplePrintf.....	24
simpleSeparateCompilation - Simple Static GPU Device Library.....	24
simpleStreams.....	25
simpleSurfaceWrite - Simple Surface Write.....	25
simpleTemplates - Simple Templates.....	25
simpleTemplates_nvrtc - Simple Templates with libNVRTC.....	26
simpleTexture - Simple Texture.....	26
simpleTextureDrv - Simple Texture (Driver Version).....	26
simpleVoteIntrinsics - Simple Vote Intrinsics.....	27
simpleVoteIntrinsics_nvrtc - Simple Vote Intrinsics with libNVRTC.....	27
simpleZeroCopy.....	28
template - Template.....	28
template_runtime - Template using CUDA Runtime.....	28
UnifiedMemoryStreams - Unified Memory Streams.....	29
vectorAdd - Vector Addition.....	29
vectorAdd_nvrtc - Vector Addition with libNVRTC.....	29
vectorAddDrv - Vector Addition Driver API.....	30
3.2. Utilities Reference.....	30
bandwidthTest - Bandwidth Test.....	30
deviceQuery - Device Query.....	31
deviceQueryDrv - Device Query Driver API.....	31
p2pBandwidthLatencyTest - Peer-to-Peer Bandwidth Latency Test with Multi-GPUs.....	31
3.3. Graphics Reference.....	32
bindlessTexture - Bindless Texture.....	32
Mandelbrot.....	32
marchingCubes - Marching Cubes Isosurfaces.....	33
simpleD3D10 - Simple Direct3D10 (Vertex Array).....	33

simpleD3D10RenderTarget - Simple Direct3D10 Render Target.....	34
simpleD3D10Texture - Simple D3D10 Texture.....	34
simpleD3D11Texture - Simple D3D11 Texture.....	34
simpleD3D9 - Simple Direct3D9 (Vertex Arrays).....	35
simpleD3D9Texture - Simple D3D9 Texture.....	35
simpleGL - Simple OpenGL.....	36
simpleGLES - Simple OpenGL ES.....	36
simpleGLES_screen - Simple OpenGL ES on Screen.....	37
simpleTexture3D - Simple Texture 3D.....	37
SLID3D10Texture - SLI D3D10 Texture.....	38
volumeFiltering - Volumetric Filtering with 3D Textures and Surface Writes.....	38
volumeRender - Volume Rendering with 3D Textures.....	38
3.4. Imaging Reference.....	39
bicubicTexture - Bicubic B-spline Interpolation.....	39
bilateralFilter - Bilateral Filter.....	40
boxFilter - Box Filter.....	40
convolutionFFT2D - FFT-Based 2D Convolution.....	41
convolutionSeparable - CUDA Separable Convolution.....	41
convolutionTexture - Texture-based Separable Convolution.....	41
cudaDecodeD3D9 - CUDA Video Decoder D3D9 API.....	42
cudaDecodeGL - CUDA Video Decoder GL API.....	42
dct8x8 - DCT8x8.....	43
dwtHaar1D - 1D Discrete Haar Wavelet Decomposition.....	43
dxtc - DirectX Texture Compressor (DXTC).....	44
histogram - CUDA Histogram.....	44
HSOpticalFlow - Optical Flow.....	44
imageDenoising - Image denoising.....	45
postProcessGL - Post-Process in OpenGL.....	45
recursiveGaussian - Recursive Gaussian Filter.....	46
simpleCUDA2GL - CUDA and OpenGL Interop of Images.....	46
SobelFilter - Sobel Filter.....	47
stereoDisparity - Stereo Disparity Computation (SAD SIMD Intrinsics).....	47
3.5. Finance Reference.....	47
binomialOptions - Binomial Option Pricing.....	47
binomialOptions_nvrtc - Binomial Option Pricing with libNVRTC.....	48
BlackScholes - Black-Scholes Option Pricing.....	48
BlackScholes_nvrtc - Black-Scholes Option Pricing with libNVRTC.....	49
MonteCarloMultiGPU - Monte Carlo Option Pricing with Multi-GPU support.....	49
quasirandomGenerator - Niederreiter Quasirandom Sequence Generator.....	50
quasirandomGenerator_nvrtc - Niederreiter Quasirandom Sequence Generator with libNVRTC.....	50
SobolQRNG - Sobol Quasirandom Number Generator.....	50
3.6. Simulations Reference.....	51

fluidsD3D9 - Fluids (Direct3D Version).....	51
fluidsGL - Fluids (OpenGL Version).....	51
nbody - CUDA N-Body Simulation.....	52
nbody_screen - CUDA N-Body Simulation on Screen.....	52
oceanFFT - CUDA FFT Ocean Simulation.....	53
particles - Particles.....	53
smokeParticles - Smoke Particles.....	54
VFlockingD3D10.....	55
3.7. Advanced Reference.....	55
alignedTypes - Aligned Types.....	55
cdpAdvancedQuicksort - Advanced Quicksort (CUDA Dynamic Parallelism).....	55
cdpBezierTessellation - Bezier Line Tessellation (CUDA Dynamic Parallelism).....	56
cdpLUdecomposition - LU Decomposition (CUDA Dynamic Parallelism).....	56
cdpQuadtree - Quad Tree (CUDA Dynamic Parallelism).....	57
concurrentKernels - Concurrent Kernels.....	57
eigenvalues - Eigenvalues.....	57
fastWalshTransform - Fast Walsh Transform.....	58
FDTD3d - CUDA C 3D FDTD.....	58
FunctionPointers - Function Pointers.....	58
interval - Interval Computing.....	59
lineOfSight - Line of Sight.....	59
matrixMulDynlinkJIT - Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version).....	59
mergeSort - Merge Sort.....	60
newdelete - NewDelete.....	60
ptxjit - PTX Just-in-Time compilation.....	60
radixSortThrust - CUDA Radix Sort (Thrust Library).....	60
reduction - CUDA Parallel Reduction.....	61
scalarProd - Scalar Product.....	61
scan - CUDA Parallel Prefix Sum (Scan).....	62
segmentationTreeThrust - CUDA Segmentation Tree Thrust Library.....	62
shfl_scan - CUDA Parallel Prefix Sum with Shuffle Intrinsics (SHFL_Scan).....	62
simpleHyperQ.....	62
sortingNetworks - CUDA Sorting Networks.....	63
StreamPriorities - Stream Priorities.....	63
threadFenceReduction.....	63
threadMigration - CUDA Context Thread Management.....	64
transpose - Matrix Transpose.....	64
3.8. Cudalibraries Reference.....	65
batchCUBLAS.....	65
boxFilterNPP - Box Filter with NPP.....	65
conjugateGradient - ConjugateGradient.....	65
conjugateGradientPrecond - Preconditioned Conjugate Gradient.....	66

conjugateGradientUM - ConjugateGradientUM.....	66
cuHook - CUDA Interception Library.....	67
freelImageInteropNPP - FreeImage and NPP Interopability.....	67
grabcutNPP - GrabCut with NPP.....	67
histEqualizationNPP - Histogram Equalization with NPP.....	68
imageSegmentationNPP - Image Segmentation using Graphcuts with NPP.....	68
jpegNPP - JPEG encode/decode and resize with NPP.....	68
MC_EstimatePiInlineP - Monte Carlo Estimation of Pi (inline PRNG).....	69
MC_EstimatePiInlineQ - Monte Carlo Estimation of Pi (inline QRNG).....	69
MC_EstimatePiP - Monte Carlo Estimation of Pi (batch PRNG).....	70
MC_EstimatePiQ - Monte Carlo Estimation of Pi (batch QRNG).....	70
MC_SingleAsianOptionP - Monte Carlo Single Asian Option.....	71
MersenneTwisterGP11213.....	71
randomFog - Random Fog.....	71
simpleCUBLAS - Simple CUBLAS.....	72
simpleCUFFT - Simple CUFFT.....	72
simpleCUFFT_2d_MGPU - SimpleCUFFT_2d_MGPU.....	73
simpleCUFFT_callback - Simple CUFFT Callbacks.....	73
simpleCUFFT_MGPU - Simple CUFFT_MGPU.....	74
simpleDevLibCUBLAS - simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism).....	74

# Chapter 1.

## RELEASE NOTES

This section describes the release notes for the CUDA Samples only. For the release notes for the whole CUDA Toolkit, please see [CUDA Toolkit Release Notes](#).

### 1.1. CUDA 7.0

- ▶ Removed support for Windows 32-bit builds.
- ▶ The Makefile `x86_64=1` and `ARMv7=1` options have been deprecated. Please use `TARGET_ARCH` to set the targeted build architecture instead.
- ▶ The Makefile `GCC` option has been deprecated. Please use `HOST_COMPILER` to set the host compiler instead.
- ▶ The CUDA Samples are no longer shipped as prebuilt binaries on Windows. Please use VS Solution files provided to build respective executable.
- ▶ Added `0_Simple/clock_nvrtc`. Demonstrates how to compile clock function kernel at runtime using libNVRTC to measure the performance of kernel accurately.
- ▶ Added `0_Simple/inlinePTX_nvrtc`. Demonstrates compilation of CUDA kernel having PTX embedded at runtime using libNVRTC.
- ▶ Added `0_Simple/matrixMul_nvrtc`. Demonstrates compilation of matrix multiplication CUDA kernel at runtime using libNVRTC.
- ▶ Added `0_Simple/simpleAssert_nvrtc`. Demonstrates compilation of CUDA kernel having `assert()` at runtime using libNVRTC.
- ▶ Added `0_Simple/simpleAtomicIntrinsics_nvrtc`. Demonstrates compilation of CUDA kernel performing atomic operations at runtime using libNVRTC.
- ▶ Added `0_Simple/simpleTemplates_nvrtc`. Demonstrates compilation of templated dynamically allocated shared memory arrays CUDA kernel at runtime using libNVRTC.
- ▶ Added `0_Simple/simpleVoteIntrinsics_nvrtc`. Demonstrates compilation of CUDA kernel which uses vote intrinsics at runtime using libNVRTC.
- ▶ Added `0_Simple/vectorAdd_nvrtc`. Demonstrates compilation of CUDA kernel performing vector addition at runtime using libNVRTC.
- ▶ Added `4_Finance/binomialOptions_nvrtc`. Demonstrates runtime compilation using libNVRTC of CUDA kernel which evaluates fair call price for a given set of European options under binomial model.

- ▶ Added **4\_Finance/BlackScholes\_nvrtc**. Demonstrates runtime compilation using libNVRTC of CUDA kernel which evaluates fair call and put prices for a given set of European options by Black-Scholes formula.
- ▶ Added **4\_Finance/quasirandomGenerator\_nvrtc**. Demonstrates runtime compilation using libNVRTC of CUDA kernel which implements Niederreiter Quasirandom Sequence Generator and Inverse Cumulative Normal Distribution functions for the generation of Standard Normal Distributions.

## 1.2. CUDA 6.5

- ▶ Added **7\_CUDALibraries/cuHook**. Demonstrates how to build and use an intercept library with CUDA.
- ▶ Added **7\_CUDALibraries/simpleCUFFT\_callback**. Demonstrates how to compute a 1D-convolution of a signal with a filter using a user-supplied CUFFT callback routine, rather than a separate kernel call.
- ▶ Added **7\_CUDALibraries/simpleCUFFT\_MGPU**. Demonstrates how to compute a 1D-convolution of a signal with a filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain on Multiple GPUs.
- ▶ Added **7\_CUDALibraries/simpleCUFFT\_2d\_MGPU**. Demonstrates how to compute a 2D-convolution of a signal with a filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain on Multiple GPUs.
- ▶ Removed **3\_Imaging/cudaEncode**. Support for the CUDA Video Encoder (NVCUVENC) has been removed.
- ▶ Removed **4\_Finance/ExcelCUDA2007**. The topic will be covered in a blog post at [Parallel Forall](#).
- ▶ Removed **4\_Finance/ExcelCUDA2010**. The topic will be covered in a blog post at [Parallel Forall](#).
- ▶ The **4\_Finance/binomialOptions** sample is now restricted to running on GPUs with SM architecture 2.0 or greater.
- ▶ The **4\_Finance/quasirandomGenerator** sample is now restricted to running on GPUs with SM architecture 2.0 or greater.
- ▶ The **7\_CUDALibraries/boxFilterNPP** sample now demonstrates how to use the static NPP libraries on Linux and Mac.
- ▶ The **7\_CUDALibraries/conjugateGradient** sample now demonstrates how to use the static CUBLAS and CUSPARSE libraries on Linux and Mac.
- ▶ The **7\_CUDALibraries/MersenneTwisterGP11213** sample now demonstrates how to use the static CURAND library on Linux and Mac.

## 1.3. CUDA 6.0

- ▶ New featured samples that support a new CUDA 6.0 feature called UVM-Lite

- ▶ Added **0\_Simple/UnifiedMemoryStreams** - new CUDA sample that demonstrates the use of OpenMP and CUDA streams with Unified Memory on a single GPU.
- ▶ Added **1\_Uutilities/p2pBandwidthTestLatency** - new CUDA sample that demonstrates how measure latency between pairs of GPUs with P2P enabled and P2P disabled.
- ▶ Added **6\_Advanced/StreamPriorities** - This sample demonstrates basic use of the new CUDA 6.0 feature stream priorities.
- ▶ Added **7\_CUDA Libraries/ConjugateGradientUM** - This sample implements a conjugate gradient solver on GPU using cuBLAS and cuSPARSE library, using Unified Memory.

## 1.4. CUDA 5.5

- ▶ Linux makefiles have been updated to generate code for the ARMv7 architecture. Only the ARM hard-float floating point ABI is supported. Both native ARMv7 compilation and cross compilation from x86 is supported
- ▶ Performance improvements in CUDA toolkit for Kepler GPUs (SM 3.0 and SM 3.5)
- ▶ Makefiles projects have been updated to properly find search default paths for OpenGL, CUDA, MPI, and OpenMP libraries for all OS Platforms (Mac, Linux x86, Linux ARM).
- ▶ Linux and Mac project Makefiles now invoke NVCC for building and linking projects.
- ▶ Added **0\_Simple/cppOverload** - new CUDA sample that demonstrates how to use C++ overloading with CUDA.
- ▶ Added **6\_Advanced/cdpBezierTessellation** - new CUDA sample that demonstrates an advanced method of implementing Bezier Line Tessellation using CUDA Dynamic Parallelism. Requires compute capability 3.5 or higher.
- ▶ Added **7\_CUDA Libraries/jpegNPP** - new CUDA sample that demonstrates how to use NPP for JPEG compression on the GPU.
- ▶ CUDA Samples now have better integration with Nsight Eclipse IDE.
- ▶ **6\_Advanced/ptxjit** sample now includes a new API to demonstrate PTX linking at the driver level.

## 1.5. CUDA 5.0

- ▶ New directory structure for CUDA samples. Samples are classified accordingly to categories: **0\_Simple**, **1\_Uutilities**, **2\_Graphics**, **3\_Imaging**, **4\_Finance**, **5\_Simulations**, **6\_Advanced**, and **7\_CUDA Libraries**
- ▶ Added **0\_Simple/simpleIPC** - CUDA Runtime API sample is a very basic sample that demonstrates Inter Process Communication with one process per GPU for computation. Requires Compute Capability 2.0 or higher and a Linux Operating System.
- ▶ Added **0\_Simple/simpleSeparateCompilation** - demonstrates a CUDA 5.0 feature, the ability to create a GPU device static library and use it within another

CUDA kernel. This example demonstrates how to pass in a GPU device function (from the GPU device static library) as a function pointer to be called. Requires Compute Capability 2.0 or higher.

- ▶ Added **2\_Graphics/bindlessTexture** - demonstrates use of **cudaSurfaceObject**, **cudaTextureObject**, and MipMap support in CUDA. Requires Compute Capability 3.0 or higher.
- ▶ Added **3\_Imaging/stereoDisparity** - demonstrates how to compute a stereo disparity map using SIMD SAD (Sum of Absolute Difference) intrinsics. Requires Compute Capability 2.0 or higher.
- ▶ Added **0\_Simple/cdpSimpleQuicksort** - demonstrates a simple quicksort implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.
- ▶ Added **0\_Simple/cdpSimplePrint** - demonstrates simple printf implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.
- ▶ Added **6\_Advanced/cdpLUdecomposition** - demonstrates LU Decomposition implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.
- ▶ Added **6\_Advanced/cdpAdvancedQuicksort** - demonstrates an advanced quicksort implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.
- ▶ Added **6\_Advanced/cdpQuadtree** - demonstrates Quad Trees implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.
- ▶ Added **7\_CUDA Libraries/simpleDevLibCUBLAS** - implements a simple cuBLAS function calls that call GPU device API library running cuBLAS functions. cuBLAS device code functions take advantage of CUDA Dynamic Parallelism and requires compute capability of 3.5 or higher.

## 1.6. CUDA 4.2

- ▶ Added **segmentationTreeThrust** - demonstrates a method to build image segmentation trees using Thrust. This algorithm is based on Boruvka's MST algorithm.

## 1.7. CUDA 4.1

- ▶ Added **MersenneTwisterGP11213** - implements Mersenne Twister GP11213, a pseudorandom number generator using the **cuRAND** library.
- ▶ Added **HSOpticalFlow** - When working with image sequences or video it's often useful to have information about objects movement. Optical flow describes apparent motion of objects in image sequence. This sample is a Horn-Schunck method for optical flow written using CUDA.
- ▶ Added **volumeFiltering** - demonstrates basic volume rendering and filtering using 3D textures.

- ▶ Added **simpleCubeMapTexture** - demonstrates how to use **texcubemap** fetch instruction in a CUDA C program.
- ▶ Added **simpleAssert** - demonstrates how to use GPU assert in a CUDA C program.
- ▶ Added **grabcutNPP** - CUDA implementation of Rother et al. GrabCut approach using the 8 neighborhood **NPP** Graphcut primitive introduced in CUDA 4.1. (C. Rother, V. Kolmogorov, A. Blake. *GrabCut: Interactive Foreground Extraction Using Iterated Graph Cuts*. *ACM Transactions on Graphics (SIGGRAPH'04)*, 2004).

# Chapter 2.

## GETTING STARTED

The CUDA Samples are an educational resource provided to teach CUDA programming concepts. The CUDA Samples are not meant to be used for performance measurements.

For system requirements and installation instructions, please refer to the [Linux Getting Started Guide](#), the [Windows Getting Started Guide](#), and the [Mac Getting Started Guide](#).

### 2.1. Getting CUDA Samples

#### Windows

On Windows, the CUDA Samples are installed using the [CUDA Toolkit Windows Installer](#). By default, the CUDA Samples are installed in:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\
```

The installation location can be changed at installation time.

#### Linux

On Linux, to install the CUDA Samples, the CUDA toolkit must first be installed. See the [Getting Started Guide](#) for more information on how to install the CUDA Toolkit.

Then the CUDA Samples can be installed by running the following command, where `<target_path>` is the location where to install the samples:

```
$ cuda-install-samples-7.0.sh <target_path>
```

#### Mac OSX

On Mac OSX, to install the CUDA Samples, the CUDA toolkit must first be installed. See the [Getting Started Guide](#) for more information on how to install the CUDA Toolkit.

Then the CUDA Samples can be installed by running the following command, where `<target_path>` is the location where to install the samples:

```
$ cuda-install-samples-7.0.sh <target_path>
```

## 2.2. Building Samples

### Windows

The Windows samples are built using the Visual Studio IDE. Solution files (.sln) are provided for each supported version of Visual Studio, using the format:

```
*_vs<version>.sln - for Visual Studio <version>
```

Complete samples solution files exist at:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\
```

Each individual sample has its own set of solution files at:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\<sample_dir>\
```

To build/examine all the samples at once, the complete solution files should be used. To build/examine a single sample, the individual sample solution files should be used.

Some samples require that the Microsoft DirectX SDK (June 2010 or newer) be installed and that the VC++ directory paths are properly set up (**Tools > Options...**). Check [DirectX Dependencies section](#) for details.

### Linux

The Linux samples are built using makefiles. To use the makefiles, change the current directory to the sample directory you wish to build, and run **make**:

```
$ cd <sample_dir>
$ make
```

The samples makefiles can take advantage of certain options:

- **TARGET\_ARCH=<arch>** - cross-compile targeting a specific architecture. Allowed architectures are x86\_64, armv7l, aarch64, and ppc64le.

By default, TARGET\_ARCH is set to HOST\_ARCH. On a x86\_64 machine, not setting TARGET\_ARCH is the equivalent of setting TARGET\_ARCH=x86\_64.

```
$ make TARGET_ARCH=x86_64
$ make TARGET_ARCH=armv7l
$ make TARGET_ARCH=aarch64
$ make TARGET_ARCH=ppc64le
```

See [here](#) for more details.

- **dbg=1** - build with debug symbols

```
$ make dbg=1
```

- **SMS="A B ..."** - override the SM architectures for which the sample will be built, where "A B ..." is a space-delimited list of SM architectures. For example, to generate SASS for SM 20 and SM 30, use **SMS="20 30"**.

```
$ make SMS="20 30"
```

- ▶ **HOST\_COMPILER=<host\_compiler>** - override the default g++ host compiler. See the [Linux Getting Started Guide](#) for a list of supported host compilers.

```
$ make HOST_COMPILER=g++
```

## Mac

The Mac samples are built using makefiles. To use the makefiles, change directory into the sample directory you wish to build, and run **make**:

```
$ cd <sample_dir>
$ make
```

The samples makefiles can take advantage of certain options:

- ▶ **dbg=1** - build with debug symbols

```
$ make dbg=1
```

- ▶ **SMS="A B ..."** - override the SM architectures for which the sample will be built, where "**A B ...**" is a space-delimited list of SM architectures. For example, to generate SASS for SM 20 and SM 30, use **SMS="20 30"**.

```
$ make SMS="A B ..."
```

- ▶ **HOST\_COMPILER=<host\_compiler>** - override the default clang host compiler. See the [Mac Getting Started Guide](#) for a list of supported host compilers.

```
$ make HOST_COMPILER=clang
```

## 2.3. CUDA Cross-Platform Samples

This section describes the options used to build cross-platform samples.

**TARGET\_ARCH=<arch>** and **TARGET\_OS=<os>** should be chosen based on the supported targets shown below. **TARGET\_FS=<path>** can be used to point nvcc to libraries and headers used by the sample.

Table 1 Supported Target Arch/OS Combinations

		TARGET OS			
		linux	darwin	android	qnx
TARGET ARCH	x86_64	YES	YES	NO	NO
	armv7l	YES	NO	YES	YES
	aarch64	NO	NO	YES	NO
	ppc64le	YES	NO	NO	NO

## TARGET\_ARCH

The target architecture must be specified when cross-compiling applications. If not specified, it defaults to the host architecture. Allowed architectures are:

- ▶ **x86\_64** - 64-bit x86 CPU architecture
- ▶ **armv7l** - 32-bit ARM CPU architecture, like that found on Jetson TK1
- ▶ **aarch64** - 64-bit ARM CPU architecture, found on certain Android systems
- ▶ **ppc64le** - 64-bit little-endian IBM POWER8 architecture

## TARGET\_OS

The target OS must be specified when cross-compiling applications. If not specified, it defaults to the host OS. Allowed OSes are:

- ▶ **linux** - for any Linux distributions
- ▶ **darwin** - for Mac OS X
- ▶ **android** - for any supported device running Android
- ▶ **qnx** - for any supported device running QNX

## TARGET\_FS

The most reliable method to cross-compile the CUDA Samples is to use the `TARGET_FS` variable. To do so, mount the target's filesystem on the host, say at `/mnt/target`. This is typically done using `exportfs`. In cases where `exportfs` is unavailable, it is sufficient to copy the target's filesystem to `/mnt/target`. To cross-compile a sample, execute:

```
$ make TARGET_ARCH=<arch> TARGET_OS=<os> TARGET_FS=/mnt/target
```

## Copying Libraries

If the `TARGET_FS` option is not available, the libraries used should be copied from the target system to the host system, say at `/opt/target/libs`. If the sample uses GL, the GL headers must also be copied, say at `/opt/target/include`. The linker must then be told where the libraries are with the `-rpath-link` and/or `-L` options. To ignore unresolved symbols from some libraries, use the `--unresolved-symbols` option as shown below. **SAMPLE\_ENABLED** should be used to force the sample to build. For example, to cross-compile a sample which uses such libraries, execute:

```
$ make TARGET_ARCH=<arch> TARGET_OS=<os> \
    EXTRA_LDFLAGS="-rpath-link=/opt/target/libs -L/opt/target/libs --\
unresolved-symbols=ignore-in-shared-libs" \
    EXTRA_CCFLAGS="-I /opt/target/include" \
    SAMPLE_ENABLED=1
```

## 2.4. Using CUDA Samples to Create Your Own CUDA Projects

### 2.4.1. Creating CUDA Projects for Windows

Creating a new CUDA Program using the CUDA Samples infrastructure is easy. We have provided a **template** and **template\_runtime** project that you can copy and modify to suit your needs. Just follow these steps:

(<category> refers to one of the following folders: **0\_Simple**, **1\_Uutilities**, **2\_Graphics**, **3\_Imaging**, **4\_Finance**, **5\_Simulations**, **6\_Advanced**, **7\_CUDA Libraries**.)

1. Copy the content of:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\<category>\template
```

or

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\<category>\template_runtime
```

to a directory of your own:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\<category>\myproject
```

2. Edit the filenames of the project to suit your needs.

3. Edit the \*.sln, \*.vcproj and source files.

Just search and replace all occurrences of **template** or **template\_runtime** with **myproject**.

4. Build the 32-bit and/or 64-bit, release or debug configurations using:

```
myproject_vs<version>.sln
```

5. Run **myproject.exe** from the **release** or **debug** directories located in:

```
C:\ProgramData\NVIDIA Corporation\CUDA Samples\v7.0\bin\win[32|64]\[release|debug]
```

6. Now modify the code to perform the computation you require.

See the *CUDA Programming Guide* for details of programming in CUDA.

### 2.4.2. Creating CUDA Projects for Linux

The default installation folder **<SAMPLES\_INSTALL\_PATH>** is **NVIDIA\_CUDA\_7.0\_Samples** and **<category>** is one of the following: **0\_Simple**, **1\_Uutilities**, **2\_Graphics**, **3\_Imaging**, **4\_Finance**, **5\_Simulations**, **6\_Advanced**, **7\_CUDA Libraries**.

Creating a new CUDA Program using the NVIDIA CUDA Samples infrastructure is easy. We have provided a **template** or **template\_runtime** project that you can copy and modify to suit your needs. Just follow these steps:

1. Copy the **template** or **template\_runtime** project:

```
cd <SAMPLES_INSTALL_PATH>/<category>
cp -r template <myproject>
```

or (using **template\_runtime**):

```
cd <SAMPLES_INSTALL_PATH>/<category>
cp -r template_runtime <myproject>
```

2. Edit the filenames of the project to suit your needs:

```
mv template.cu myproject.cu
mv template_kernel.cu myproject_kernel.cu
mv template_gold.cpp myproject_gold.cpp
```

or (using **template\_runtime**):

```
mv main.cu myproject.cu
```

3. Edit the **Makefile** and source files.

Just search and replace all occurrences of **template** or **template\_runtime** with **myproject**.

4. Build the project as (release):

```
make
```

To build the project as (debug), use "make dbg=1":

```
make dbg=1
```

5. Run the program:

```
../../bin/x86_64/linux/release/myproject
```

6. Now modify the code to perform the computation you require.

See the *CUDA Programming Guide* for details of programming in CUDA.

## 2.4.3. Creating CUDA Projects for Mac OS X

The default installation folder **<SAMPLES\_INSTALL\_PATH>** is: **/Developer/NVIDIA/CUDA-7.0/samples**

Creating a new CUDA Program using the NVIDIA CUDA Samples infrastructure is easy. We have provided a **template** project that you can copy and modify to suit your needs. Just follow these steps:

(**<category>** is one of the following: **0\_Simple**, **1\_Uutilities**, **2\_Graphics**, **3\_Imaging**, **4\_Finance**, **5\_Simulations**, **6\_Advanced**, **7\_CUDALibraries**.)

1. Copy the template project:

```
cd <SAMPLES_INSTALL_PATH>/<category>
cp -r template <myproject>
```

2. Edit the filenames of the project to suit your needs:

```
mv template.cu myproject.cu
mv template_kernel.cu myproject_kernel.cu
mv template_gold.cpp myproject_gold.cpp
```

3. Edit the **Makefile** and source files.

Just search and replace all occurrences of **template** with **myproject**.

4. Build the project as (release):

```
make
```

Note: To build the project as (debug), use "make dbg=1"

```
make dbg=1
```

5. Run the program:

```
../../bin/x86_64/darwin/release/myproject
```

(It should print **PASSED**.)

6. Now modify the code to perform the computation you require.

See the *CUDA Programming Guide* for details of programming in CUDA.

# Chapter 3.

## SAMPLES REFERENCE

This document contains a complete listing of the code samples that are included with the NVIDIA CUDA Toolkit. It describes each code sample, lists the minimum GPU specification, and provides links to the source code and white papers if available.

The code samples are divided into the following categories:

### **Simple Reference**

Basic CUDA samples for beginners that illustrate key concepts with using CUDA and CUDA runtime APIs.

### **Utilities Reference**

Utility samples that demonstrate how to query device capabilities and measure GPU/CPU bandwidth.

### **Graphics Reference**

Graphical samples that demonstrate interoperability between CUDA and OpenGL or DirectX.

### **Imaging Reference**

Samples that demonstrate image processing, compression, and data analysis.

### **Finance Reference**

Samples that demonstrate parallel algorithms for financial computing.

### **Simulations Reference**

Samples that illustrate a number of simulation algorithms implemented with CUDA.

### **Advanced Reference**

Samples that illustrate advanced algorithms implemented with CUDA.

### **Cudalibraries Reference**

Samples that illustrate how to use CUDA platform libraries (NPP, cuBLAS, cuFFT, cuSPARSE, and cuRAND).

## 3.1. Simple Reference

### asyncAPI

This sample uses CUDA streams and events to overlap execution on CPU and GPU.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaMemcpyAsync
<b>Key Concepts</b>	Asynchronous Data Transfers, CUDA Streams and Events
<b>Supported OSes</b>	Linux, Windows, OS X

## cdpSimplePrint - Simple Print (CUDA Dynamic Parallelism)

This sample demonstrates simple printf implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## cdpSimpleQuicksort - Simple Quicksort (CUDA Dynamic Parallelism)

This sample demonstrates simple quicksort implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## clock - Clock

This example shows how to use the clock function to measure the performance of kernel accurately.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## clock\_nvrtc - Clock libNVRTC

This example shows how to use the clock function using libNVRTC to measure the performance of kernel accurately.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	Performance Strategies, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## cppIntegration - C++ Integration

This example demonstrates how to integrate CUDA into an existing C++ application, i.e. the CUDA entry point on host side is only a function which is called from C++ code and only the file containing this function is compiled with nvcc. It also demonstrates that vector types can be used from cpp.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy
<b>Supported OSes</b>	Linux, Windows, OS X

## cppOverload

This sample demonstrates how to use C++ function overloading on the GPU.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaFuncSetCacheConfig, cudaFuncGetAttributes
<b>Key Concepts</b>	C++ Function Overloading, CUDA Streams and Events
<b>Supported OSes</b>	Linux, Windows, OS X

## cudaOpenMP

This sample demonstrates how to use OpenMP API to write an application for multiple GPUs.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	OpenMP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Systems Integration, OpenMP, Multithreading
<b>Supported OSes</b>	Linux, Windows, OS X

## inlinePTX - Using Inline PTX

A simple test application that demonstrates a new CUDA 4.0 ability to embed PTX in a CUDA kernel.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocHost, cudaFree, cudaFreeHost, cudaMemcpy
<b>Key Concepts</b>	Performance Strategies, PTX Assembly, CUDA Driver API
<b>Supported OSes</b>	Linux, Windows, OS X

## inlinePTX\_nvrtc - Using Inline PTX with libNVRTC

A simple test application that demonstrates a new CUDA 4.0 ability to embed PTX in a CUDA kernel.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocHost, cudaFree, cudaFreeHost, cudaMemcpy
<b>Key Concepts</b>	Performance Strategies, PTX Assembly, CUDA Driver API, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## matrixMul - Matrix Multiplication (CUDA Runtime API Version)

This sample implements matrix multiplication and is exactly the same as Chapter 6 of the programming guide. It has been written for clarity of exposition to illustrate various CUDA programming principles, not with the goal of providing the most performant generic kernel for matrix multiplication. To illustrate GPU performance for matrix multiply, this sample also shows how to use the new CUDA 4.0 interface for CUBLAS to demonstrate high-performance performance for matrix multiplication.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaEventSynchronize, cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Runtime API, Linear Algebra
<b>Supported OSes</b>	Linux, Windows, OS X

## matrixMul\_nvrtc - Matrix Multiplication with libNVRTC

This sample implements matrix multiplication and is exactly the same as Chapter 6 of the programming guide. It has been written for clarity of exposition to illustrate various CUDA programming principles, not with the goal of providing the most performant

generic kernel for matrix multiplication. To illustrate GPU performance for matrix multiply, this sample also shows how to use the new CUDA 4.0 interface for CUBLAS to demonstrate high-performance performance for matrix multiplication.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaEventSynchronize, cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Runtime API, Linear Algebra, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## matrixMulCUBLAS - Matrix Multiplication (CUBLAS)

This sample implements matrix multiplication from Chapter 3 of the programming guide. To illustrate GPU performance for matrix multiply, this sample also shows how to use the new CUDA 4.0 interface for CUBLAS to demonstrate high-performance performance for matrix multiplication.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUBLAS
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaMalloc, cudaFree, cudaMemcpy, cublasCreate, cublasSgemm
<b>Key Concepts</b>	CUDA Runtime API, Performance Strategies, Linear Algebra, CUBLAS
<b>Supported OSes</b>	Linux, Windows, OS X

## matrixMulDrv - Matrix Multiplication (CUDA Driver API Version)

This sample implements matrix multiplication and uses the new CUDA 4.0 kernel launch Driver API. It has been written for clarity of exposition to illustrate various CUDA programming principles, not with the goal of providing the most performant generic kernel for matrix multiplication. CUBLAS provides high-performance matrix multiplication.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuModuleLoad, cuModuleLoadDataEx, cuModuleGetFunction, cuMemAlloc, cuMemFree, cuMemcpyHtoD, cuMemcpyDtoH, cuLaunchKernel
<b>Key Concepts</b>	CUDA Driver API, Matrix Multiply
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleAssert

This CUDA Runtime API sample is a very basic sample that implements how to use the assert function in the device code. Requires Compute Capability 2.0 .

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocHost, cudaFree, cudaFreeHost, cudaMemcpy
<b>Key Concepts</b>	Assert
<b>Supported OSes</b>	Linux, Windows

## simpleAssert\_nvrtc - simpleAssert with libNVRTC

This CUDA Runtime API sample is a very basic sample that implements how to use the assert function in the device code. Requires Compute Capability 2.0 .

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

<b>CUDA API</b>	<code>cudaMalloc</code> , <code>cudaMallocHost</code> , <code>cudaFree</code> , <code>cudaFreeHost</code> , <code>cudaMemcpy</code>
<b>Key Concepts</b>	<code>Assert</code> , <code>Runtime Compilation</code>
<b>Supported OSes</b>	<code>Linux</code> , <code>Windows</code>

## simpleAtomicIntrinsics - Simple Atomic Intrinsics

A simple demonstration of global memory atomic instructions. Requires Compute Capability 2.0 or higher.

<b>Supported SM Architecture</b>	<code>SM 2.0</code> , <code>SM 3.0</code> , <code>SM 3.2</code> , <code>SM 3.5</code> , <code>SM 3.7</code> , <code>SM 5.0</code> , <code>SM 5.2</code> , <code>SM 5.3</code>
<b>CUDA API</b>	<code>cudaMalloc</code> , <code>cudaFree</code> , <code>cudaMemcpy</code> , <code>cudaFreeHost</code>
<b>Key Concepts</b>	<code>Atomic Intrinsics</code>
<b>Supported OSes</b>	<code>Linux</code> , <code>Windows</code> , <code>OS X</code>

## simpleAtomicIntrinsics\_nvrtc - Simple Atomic Intrinsics with libNVRTC

A simple demonstration of global memory atomic instructions.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	<code>NVRTC</code>
<b>Supported SM Architecture</b>	<code>SM 2.0</code> , <code>SM 3.0</code> , <code>SM 3.2</code> , <code>SM 3.5</code> , <code>SM 3.7</code> , <code>SM 5.0</code> , <code>SM 5.2</code> , <code>SM 5.3</code>
<b>CUDA API</b>	<code>cudaMalloc</code> , <code>cudaFree</code> , <code>cudaMemcpy</code> , <code>cudaFreeHost</code>
<b>Key Concepts</b>	<code>Atomic Intrinsics</code> , <code>Runtime Compilation</code>
<b>Supported OSes</b>	<code>Linux</code> , <code>Windows</code> , <code>OS X</code>

## simpleCallback - Simple CUDA Callbacks

This sample implements multi-threaded heterogeneous computing workloads with the new CPU callbacks for CUDA streams and events introduced with CUDA 5.0.

<b>Supported SM Architecture</b>	<code>SM 2.0</code> , <code>SM 3.0</code> , <code>SM 3.2</code> , <code>SM 3.5</code> , <code>SM 3.7</code> , <code>SM 5.0</code> , <code>SM 5.2</code> , <code>SM 5.3</code>
----------------------------------	---

<b>CUDA API</b>	<code>cudaStreamCreate</code> , <code>cudaMemcpyAsync</code> , <code>cudaStreamAddCallback</code> , <code>cudaStreamDestroy</code>
<b>Key Concepts</b>	CUDA Streams, Callback Functions, Multithreading
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCubemapTexture - Simple Cubemap Texture

Simple example that demonstrates how to use a new CUDA 4.1 feature to support cubemap Textures in CUDA C.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	<code>cudaMalloc</code> , <code>cudaMalloc3DArray</code> , <code>cudaMemcpy3D</code> , <code>cudaCreateChannelDesc</code> , <code>cudaBindTextureToArray</code> , <code>cudaMalloc</code> , <code>cudaFree</code> , <code>cudaFreeArray</code> , <code>cudaMemcpy</code>
<b>Key Concepts</b>	Texture, Volume Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleIPC

This CUDA Runtime API sample is a very basic sample that demonstrates Inter Process Communication with one process per GPU for computation. Requires Compute Capability 2.0 or higher and a Linux Operating System

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	IPC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	<code>cudaIpcGetEventHandle</code> , <code>cudaIpcOpenMemHandle</code> , <code>cudaIpcCloseMemHandle</code> , <code>cudaFreeHost</code> , <code>cudaMemcpy</code>
<b>Key Concepts</b>	CUDA Systems Integration, Peer to Peer, InterProcess Communication
<b>Supported OSes</b>	Linux

## simpleLayeredTexture - Simple Layered Texture

Simple example that demonstrates how to use a new CUDA 4.0 feature to support layered Textures in CUDA C.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMalloc3DArray, cudaMemcpy3D, cudaCreateChannelDesc, cudaBindTextureToArray, cudaMalloc, cudaFree, cudaFreeArray, cudaMemcpy
<b>Key Concepts</b>	Texture, Volume Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleMPI

Simple example demonstrating how to use MPI in combination with CUDA.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	MPI
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Systems Integration, MPI, Multithreading
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleMultiCopy - Simple Multi Copy and Compute

Supported in GPUs with Compute Capability 1.1, overlapping compute with one memcpy is possible from the host system. For Quadro and Tesla GPUs with Compute Capability 2.0, a second overlapped copy operation in either direction at full speed is possible (PCI-e is symmetric). This sample illustrates the usage of CUDA streams to achieve overlapping of kernel execution with data copies to and from the device.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaMemcpyAsync

<b>Key Concepts</b>	CUDA Streams and Events, Asynchronous Data Transfers, Overlap Compute and Copy, GPU Performance
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleMultiGPU - Simple Multi-GPU

This application demonstrates how to use the new CUDA 4.0 API for CUDA context management and multi-threaded access to run CUDA kernels on multiple-GPUs.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaMemcpyAsync
<b>Key Concepts</b>	Asynchronous Data Transfers, CUDA Streams and Events, Multithreading, Multi-GPU
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleOccupancy

This sample demonstrates the basic usage of the CUDA occupancy calculator and occupancy-based launch configurator APIs by launching a kernel with the launch configurator, and measures the utilization difference against a manually configured launch.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Occupancy Calculator
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleP2P - Simple Peer-to-Peer Transfers with Multi-GPU

This application demonstrates the new CUDA 4.0 APIs that support Peer-To-Peer (P2P) copies, Peer-To-Peer (P2P) addressing, and UVA (Unified Virtual Memory Addressing) between multiple Tesla GPUs.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	only-64-bit
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaDeviceCanAccessPeer, cudaDeviceEnablePeerAccess, cudaDeviceDisablePeerAccess, cudaEventCreateWithFlags, cudaEventElapsedTime, cudaMemcpy
<b>Key Concepts</b>	Performance Strategies, Asynchronous Data Transfers, Unified Virtual Address Space, Peer to Peer Data Transfers, Multi-GPU
<b>Supported OSes</b>	Linux, Windows, OS X

## simplePitchLinearTexture - Pitch Linear Texture

Use of Pitch Linear Textures

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMallocPitch, cudaMallocArray, cudaMemcpy2D, cudaMemcpyToArray, cudaBindTexture2D, cudaBindTextureToArray, cudaCreateChannelDesc, cudaMalloc, cudaFree, cudaFreeArray, cudaUnbindTexture, cudaMemset2D, cudaMemcpy2D
<b>Key Concepts</b>	Texture, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simplePrintf

This CUDA Runtime API sample is a very basic sample that implements how to use the printf function in the device code.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Debugging
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleSeparateCompilation - Simple Static GPU Device Library

This sample demonstrates a CUDA 5.0 feature, the ability to create a GPU device static library and use it within another CUDA kernel. This example demonstrates how to pass

in a GPU device function (from the GPU device static library) as a function pointer to be called. This sample requires devices with compute capability 2.0 or higher.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Separate Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleStreams

This sample uses CUDA streams to overlap kernel executions with memory copies between the host and a GPU device. This sample uses a new CUDA 4.0 feature that supports pinning of generic host memory. Requires Compute Capability 2.0 or higher.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaMemcpyAsync
<b>Key Concepts</b>	Asynchronous Data Transfers, CUDA Streams and Events
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleSurfaceWrite - Simple Surface Write

Simple example that demonstrates the use of 2D surface references (Write-to-Texture)

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocArray, cudaBindSurfaceToArray, cudaBindTextureToArray, cudaCreateChannelDesc, cudaMalloc, cudaFree, cudaFreeArray, cudaMemcpy
<b>Key Concepts</b>	Texture, Surface Writes, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleTemplates - Simple Templates

This sample is a templated version of the template project. It also shows how to correctly template dynamically allocated shared memory arrays.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
----------------------------------	--

<b>Key Concepts</b>	C++ Templates
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleTemplates\_nvrtc - Simple Templates with libNVRTC

This sample is a templated version of the template project. It also shows how to correctly template dynamically allocated shared memory arrays.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	C++ Templates, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleTexture - Simple Texture

Simple example that demonstrates use of Textures in CUDA.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocArray, cudaMemcpyToArray, cudaCreateChannelDesc, cudaBindTextureToArray, cudaMalloc, cudaFree, cudaFreeArray, cudaMemcpy
<b>Key Concepts</b>	CUDA Runtime API, Texture, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleTextureDrv - Simple Texture (Driver Version)

Simple example that demonstrates use of Textures in CUDA. This sample uses the new CUDA 4.0 kernel launch Driver API.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuModuleLoad, cuModuleLoadDataEx, cuModuleGetFunction, cuLaunchKernel, cuCtxSynchronize, cudaMemcpyDtoH, cuMemAlloc, cuMemFree, cuArrayCreate,

cuArrayDestroy, cuCtxDetach, cuMemcpy2D, cuModuleGetTexRef, cuTexRefSetArray, cuTexRefSetAddressMode, cuTexRefSetFilterMode, cuTexRefSetFlags, cuTexRefSetFormat, cuParamSetTexRef

<b>Key Concepts</b>	CUDA Driver API, Texture, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleVoteIntrinsics - Simple Vote Intrinsics

Simple program which demonstrates how to use the Vote (any, all) intrinsic instruction in a CUDA kernel. Requires Compute Capability 2.0 or higher.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaMemcpy, cudaFreeHost
<b>Key Concepts</b>	Vote Intrinsics
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleVoteIntrinsics\_nvrtc - Simple Vote Intrinsics with libNVRTC

Simple program which demonstrates how to use the Vote (any, all) intrinsic instruction in a CUDA kernel with runtime compilation using NVRTC APIs. Requires Compute Capability 2.0 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuMemAlloc, cuMemFree, cuMemcpyHtoD, cuMemFree
<b>Key Concepts</b>	Vote Intrinsics, CUDA Driver API, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleZeroCopy

This sample illustrates how to use Zero MemCopy, kernels can read and write directly to pinned system memory.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaHostAlloc, cudaHostGetDevicePointer, cudaHostRegister, cudaHostUnregister, cudaFreeHost
<b>Key Concepts</b>	Performance Strategies, Pinned System Paged Memory, Vector Addition
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	CUDA2.2PinnedMemoryAPIs.pdf

## template - Template

A trivial template project that can be used as a starting point to create new CUDA projects.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaFree, cudaDeviceSynchronize, cudaMemcpy
<b>Key Concepts</b>	Device Memory Allocation
<b>Supported OSes</b>	Linux, Windows, OS X

## template\_runtime - Template using CUDA Runtime

A trivial template project that can be used as a starting point to create new CUDA Runtime API projects.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMalloc, cudaMallocHost, cudaFree, cudaFreeHost, cudaDeviceSynchronize, cudaMemcpy
<b>Key Concepts</b>	CUDA Data Transfers, Device Memory Allocation
<b>Supported OSes</b>	Linux, Windows, OS X

## UnifiedMemoryStreams - Unified Memory Streams

This sample demonstrates the use of OpenMP and streams with Unified Memory on a single GPU.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	UVM, CUBLAS
<b>Supported SM Architecture</b>	SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaMallocManaged, cudaStreamAttachManagedMem
<b>Key Concepts</b>	CUDA Systems Integration, OpenMP, CUBLAS, Multithreading, Unified Memory, CUDA Streams and Events
<b>Supported OSes</b>	Linux, Windows

## vectorAdd - Vector Addition

This CUDA Runtime API sample is a very basic sample that implements element by element vector addition. It is the same as the sample illustrating Chapter 3 of the programming guide with some additions like error checking.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaEventCreate, cudaEventRecord, cudaEventQuery, cudaEventDestroy, cudaEventElapsedTime, cudaEventSynchronize, cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Runtime API, Vector Addition
<b>Supported OSes</b>	Linux, Windows, OS X

## vectorAdd\_nvrtc - Vector Addition with libNVRTC

This CUDA Driver API sample uses NVRTC for runtime compilation of vector addition kernel. Vector addition kernel demonstrated is the same as the sample illustrating Chapter 3 of the programming guide.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample

will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuMemAlloc, cuMemFree, cuMemcpyHtoD, cuMemcpyDtoH
<b>Key Concepts</b>	CUDA Driver API, Vector Addition, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## vectorAddDrv - Vector Addition Driver API

This Vector Addition sample is a basic sample that is implemented element by element. It is the same as the sample illustrating Chapter 3 of the programming guide with some additions like error checking. This sample also uses the new CUDA 4.0 kernel launch Driver API.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuModuleLoad, cuModuleLoadDataEx, cuModuleGetFunction, cuMemAlloc, cuMemFree, cuMemcpyHtoD, cuMemcpyDtoH, cuLaunchKernel
<b>Key Concepts</b>	CUDA Driver API, Vector Addition
<b>Supported OSes</b>	Linux, Windows, OS X

## 3.2. Utilities Reference

### bandwidthTest - Bandwidth Test

This is a simple test program to measure the memcpy bandwidth of the GPU and memcpy bandwidth across PCI-e. This test application is capable of measuring device to device copy bandwidth, host to device copy bandwidth for pageable and page-locked memory, and device to host copy bandwidth for pageable and page-locked memory.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaSetDevice, cudaHostAlloc, cudaFree, cudaMallocHost, cudaFreeHost, cudaMemcpy, cudaMemcpyAsync, cudaEventCreate, cudaEventRecord, cudaEventDestroy, cudaDeviceSynchronize, cudaEventElapsedTime
<b>Key Concepts</b>	CUDA Streams and Events, Performance Strategies

**Supported OSes** Linux, Windows, OS X

## deviceQuery - Device Query

This sample enumerates the properties of the CUDA devices present in the system.

**Supported SM Architecture** SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

**CUDA API** cudaSetDevice, cudaGetDeviceCount, cudaGetDeviceProperties, cudaDriverGetVersion, cudaRuntimeGetVersion

**Key Concepts** CUDA Runtime API, Device Query

**Supported OSes** Linux, Windows, OS X

## deviceQueryDrv - Device Query Driver API

This sample enumerates the properties of the CUDA devices present using CUDA Driver API calls

**Supported SM Architecture** SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

**CUDA API** cuInit, cuDeviceGetCount, cuDeviceComputeCapability, cuDriverGetVersion, cuDeviceTotalMem, cuDeviceGetAttribute

**Key Concepts** CUDA Driver API, Device Query

**Supported OSes** Linux, Windows, OS X

## p2pBandwidthLatencyTest - Peer-to-Peer Bandwidth Latency Test with Multi-GPUs

This application demonstrates the CUDA Peer-To-Peer (P2P) data transfers between pairs of GPUs and computes latency and bandwidth. Tests on GPU pairs using P2P and without P2P are tested.

**Supported SM Architecture** SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

**CUDA API** cudaDeviceCanAccessPeer, cudaDeviceEnablePeerAccess, cudaDeviceDisablePeerAccess, cudaEventCreateWithFlags, cudaEventElapsedTime, cudaMemcpy

**Key Concepts** Performance Strategies, Asynchronous Data Transfers, Unified Virtual Address Space, Peer to Peer Data Transfers, Multi-GPU

**Supported OSes**      Linux, Windows, OS X

## 3.3. Graphics Reference

### bindlessTexture - Bindless Texture

This example demonstrates use of `cudaSurfaceObject`, `cudaTextureObject`, and `MipMap` support in CUDA. A GPU with Compute Capability SM 3.0 is required to run the sample.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	<code>cudaGLSetGLDevice</code> , <code>cudaGraphicsMapResources</code> , <code>cudaGraphicsUnmapResources</code> , <code>cudaGraphicsResourceGetMappedPointer</code> , <code>cudaGraphicsRegisterResource</code> , <code>cudaGraphicsGLRegisterBuffer</code> , <code>cudaGraphicsUnregisterResource</code>
<b>Key Concepts</b>	Graphics Interop, Texture
<b>Supported OSes</b>	Linux, Windows, OS X

### Mandelbrot

This sample uses CUDA to compute and display the Mandelbrot or Julia sets interactively. It also illustrates the use of "double single" arithmetic to improve precision when zooming a long way into the pattern. This sample uses double precision. Thanks to Mark Granger of NewTek who submitted this code sample.!

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

<b>CUDA API</b>	<code>cudaGLSetGLDevice</code> , <code>cudaGraphicsMapResources</code> , <code>cudaGraphicsUnmapResources</code> , <code>cudaGraphicsResourceGetMappedPointer</code> , <code>cudaGraphicsRegisterResource</code> , <code>cudaGraphicsGLRegisterBuffer</code> , <code>cudaGraphicsUnregisterResource</code>
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms
<b>Supported OSes</b>	Linux, Windows, OS X

## marchingCubes - Marching Cubes Isosurfaces

This sample extracts a geometric isosurface from a volume dataset using the marching cubes algorithm. It uses the scan (prefix sum) function from the Thrust library to perform stream compaction.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	<code>cudaGLSetGLDevice</code> , <code>cudaGraphicsMapResources</code> , <code>cudaGraphicsUnmapResources</code> , <code>cudaGraphicsResourceGetMappedPointer</code> , <code>cudaGraphicsRegisterResource</code> , <code>cudaGraphicsGLRegisterBuffer</code> , <code>cudaGraphicsUnregisterResource</code>
<b>Key Concepts</b>	OpenGL Graphics Interop, Vertex Buffers, 3D Graphics, Physically Based Simulation
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleD3D10 - Simple Direct3D10 (Vertex Array)

Simple program which demonstrates interoperability between CUDA and Direct3D10. The program generates a vertex array with CUDA and uses Direct3D10 to render the geometry. A Direct3D Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	<code>cudaD3D10GetDevice</code> , <code>cudaD3D10SetDirect3DDevice</code> , <code>cudaGraphicsD3D10RegisterResource</code> , <code>cudaGraphicsResourceSetMapFlags</code> , <code>cudaGraphicsSubResourceGetMappedArray</code> , <code>cudaMemcpy2DToArray</code> , <code>cudaGraphicsUnregisterResource</code>

<b>Key Concepts</b>	Graphics Interop, 3D Graphics
<b>Supported OSes</b>	Windows

## simpleD3D10RenderTarget - Simple Direct3D10 Render Target

Simple program which demonstrates interop of rendertargets between Direct3D10 and CUDA. The program uses RenderTarget positions with CUDA and generates a histogram with visualization. A Direct3D10 Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D10GetDevice, cudaD3D10SetDirect3DDevice, cudaGraphicsD3D10RegisterResource, cudaGraphicsResourceSetMapFlags, cudaGraphicsSubResourceGetMappedArray, cudaMemcpy2DToArray, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Texture
<b>Supported OSes</b>	Windows

## simpleD3D10Texture - Simple D3D10 Texture

Simple program which demonstrates how to interoperate CUDA with Direct3D10 Texture. The program creates a number of D3D10 Textures (2D, 3D, and CubeMap) which are generated from CUDA kernels. Direct3D then renders the results on the screen. A Direct3D10 Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D10GetDevice, cudaD3D10SetDirect3DDevice, cudaGraphicsD3D10RegisterResource, cudaGraphicsResourceSetMapFlags, cudaGraphicsSubResourceGetMappedArray, cudaMemcpy2DToArray, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Texture
<b>Supported OSes</b>	Windows

## simpleD3D11Texture - Simple D3D11 Texture

Simple program which demonstrates Direct3D11 Texture interoperability with CUDA. The program creates a number of D3D11 Textures (2D, 3D, and CubeMap) which are

written to from CUDA kernels. Direct3D then renders the results on the screen. A Direct3D Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D11GetDevice, cudaD3D11SetDirect3DDevice, cudaGraphicsD3D11RegisterResource, cudaGraphicsResourceSetMapFlags, cudaGraphicsSubResourceGetMappedArray, cudaMemcpy2DToArray, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Windows

## simpleD3D9 - Simple Direct3D9 (Vertex Arrays)

Simple program which demonstrates interoperability between CUDA and Direct3D9. The program generates a vertex array with CUDA and uses Direct3D9 to render the geometry. A Direct3D capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D9GetDevice, cudaD3D9SetDirect3DDevice, cudaGraphicsD3D9RegisterResource, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop
<b>Supported OSes</b>	Windows

## simpleD3D9Texture - Simple D3D9 Texture

Simple program which demonstrates Direct3D9 Texture interoperability with CUDA. The program creates a number of D3D9 Textures (2D, 3D, and CubeMap) which are written to from CUDA kernels. Direct3D then renders the results on the screen. A Direct3D capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D9GetDevice, cudaD3D9SetDirect3DDevice, cudaGraphicsD3D9RegisterResource, cudaGraphicsResourceSetMapFlags, cudaGraphicsSubResourceGetMappedArray, cudaMemcpy2DToArray, cudaMemcpy3D, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Texture
<b>Supported OSes</b>	Windows

## simpleGL - Simple OpenGL

Simple program which demonstrates interoperability between CUDA and OpenGL. The program modifies vertex positions with CUDA and uses OpenGL to render the geometry.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Vertex Buffers, 3D Graphics
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleGLES - Simple OpenGL ES

Demonstrates data exchange between CUDA and OpenGL ES (aka Graphics interop). The program modifies vertex positions with CUDA and uses OpenGL ES to render the geometry.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GLES
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Vertex Buffers, 3D Graphics
<b>Supported OSes</b>	Linux

## simpleGL ES\_screen - Simple OpenGL ES on Screen

Demonstrates data exchange between CUDA and OpenGL ES (aka Graphics interop). The program modifies vertex positions with CUDA and uses OpenGL ES to render the geometry.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	screen, GLES
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Vertex Buffers, 3D Graphics
<b>Supported OSes</b>	Linux

## simpleTexture3D - Simple Texture 3D

Simple example that demonstrates use of 3D Textures in CUDA.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing, 3D Textures, Surface Writes
<b>Supported OSes</b>	Linux, Windows, OS X

## SLID3D10Texture - SLI D3D10 Texture

Simple program which demonstrates SLI with Direct3D10 Texture interoperability with CUDA. The program creates a D3D10 Texture which is written to from a CUDA kernel. Direct3D then renders the results on the screen. A Direct3D Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D10GetDevice, cudaD3D10SetDirect3DDevice, cudaGraphicsD3D10RegisterResource, cudaGraphicsResourceSetMapFlags, cudaGraphicsSubResourceGetMappedArray, cudaMemcpy2DToArray, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Performance Strategies, Graphics Interop, Image Processing, 2D Textures
<b>Supported OSes</b>	Windows

## volumeFiltering - Volumetric Filtering with 3D Textures and Surface Writes

This sample demonstrates 3D Volumetric Filtering using 3D Textures and 3D Surface Writes.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing, 3D Textures, Surface Writes
<b>Supported OSes</b>	Linux, Windows, OS X

## volumeRender - Volume Rendering with 3D Textures

This sample demonstrates basic volume rendering using 3D Textures.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing, 3D Textures
<b>Supported OSes</b>	Linux, Windows, OS X

## 3.4. Imaging Reference

### bicubicTexture - Bicubic B-spline Interpolation

This sample demonstrates how to efficiently implement a Bicubic B-spline interpolation filter with CUDA texture.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## bilateralFilter - Bilateral Filter

Bilateral filter is an edge-preserving non-linear smoothing filter that is implemented with CUDA with OpenGL rendering. It can be used in image recovery and denoising. Each pixel is weight by considering both the spatial distance and color distance between its neighbors. Reference:"C. Tomasi, R. Manduchi, Bilateral Filtering for Gray and Color Images, proceeding of the ICCV, 1998, <http://users.soe.ucsc.edu/~manduchi/Papers/ICCV98.pdf>"

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## boxFilter - Box Filter

Fast image box filter using CUDA with OpenGL rendering.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing

**Supported OSes**      [Linux](#), [Windows](#), [OS X](#)

## convolutionFFT2D - FFT-Based 2D Convolution

This sample demonstrates how 2D convolutions with very large kernel sizes can be efficiently implemented using FFT transformations.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	<a href="#">CUFFT</a>
<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>CUDA API</b>	<a href="#">cufftPlan2d</a> , <a href="#">cufftExecR2C</a> , <a href="#">cufftExecC2R</a> , <a href="#">cufftDestroy</a>
<b>Key Concepts</b>	<a href="#">Image Processing</a> , <a href="#">CUFFT Library</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>

## convolutionSeparable - CUDA Separable Convolution

This sample implements a separable convolution filter of a 2D signal with a gaussian kernel.

<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Image Processing</a> , <a href="#">Data Parallel Algorithms</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>
<b>Whitepaper</b>	<a href="#">convolutionSeparable.pdf</a>

## convolutionTexture - Texture-based Separable Convolution

Texture-based implementation of a separable 2D convolution with a gaussian kernel. Used for performance comparison against convolutionSeparable.

<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Image Processing</a> , <a href="#">Texture</a> , <a href="#">Data Parallel Algorithms</a>

**Supported OSes**      Linux, Windows, OS X

## cudaDecodeD3D9 - CUDA Video Decoder D3D9 API

This sample demonstrates how to efficiently use the CUDA Video Decoder API to decode MPEG-2, VC-1, or H.264 sources. YUV to RGB conversion of video is accomplished with CUDA kernel. The output result is rendered to a D3D9 surface. The decoded video is not displayed on the screen, but with `-displayvideo` at the command line parameter, the video output can be seen. Requires a Direct3D capable device and Compute Capability 2.0 or higher.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuDeviceGet, cuDeviceGetAttribute, cuDeviceComputeCapability, cuDeviceGetCount, cuDeviceGetName, cuDeviceTotalMem, cuD3D9CtxCreate, cuD3D9GetDevice, cuModuleLoad, cuModuleUnload, cuModuleGetFunction, cuModuleGetGlobal, cuModuleLoadDataEx, cuModuleGetTexRef, cuD3D9MapResources, cuD3D9UnmapResources, cuD3D9RegisterResource, cuD3D9UnregisterResource, cuD3D9ResourceSetMapFlags, cuD3D9ResourceGetMappedPointer, cuD3D9ResourceGetMappedPitch, cuParamSetv, cuParamSeti, cuParamSetSize, cuLaunchGridAsync, cuCtxCreate, cuMemAlloc, cuMemFree, cuMemAllocHost, cuMemFreeHost, cuMemcpyDtoHAsync, cuMemsetD8, cuStreamCreate, cuCtxPushCurrent, cuCtxPopCurrent, cuvidCreateDecoder, cuvidDecodePicture, cuvidMapVideoFrame, cuvidUnmapVideoFrame, cuvidDestroyDecoder, cuvidCtxLockCreate, cuvidCtxLockDestroy, cuCtxDestroy
<b>Key Concepts</b>	Graphics Interop, Image Processing, Video Compression
<b>Supported OSes</b>	Windows
<b>Whitepaper</b>	nvcuvid.pdf

## cudaDecodeGL - CUDA Video Decoder GL API

This sample demonstrates how to efficiently use the CUDA Video Decoder API to decode video sources based on MPEG-2, VC-1, and H.264. YUV to RGB conversion of video is accomplished with CUDA kernel. The output result is rendered to an OpenGL surface. The decoded video is black, but can be enabled with `-displayvideo` added to the command line. Requires Compute Capability 2.0 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL, cuvid
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuDeviceGet, cuDeviceGetAttribute, cuDeviceComputeCapability, cuDeviceGetCount, cuDeviceGetName, cuDeviceTotalMem, cuGLCtxCreate, cuGLGetDevice, cuModuleLoad, cuModuleUnload, cuModuleGetFunction, cuModuleGetGlobal, cuModuleLoadDataEx, cuModuleGetTexRef, cuGLMapResources, cuGLUnmapResources, cuGLRegisterResource, cuGLUnregisterResource, cuGLResourceSetMapFlags, cuGLResourceGetMappedPointer, cuGLResourceGetMappedPitch, cuParamSetv, cuParamSeti, cuParamSetSize, cuLaunchGridAsync, cuCtxCreate, cuMemAlloc, cuMemFree, cuMemAllocHost, cuMemFreeHost, cuMemcpyDtoHAsync, cuMemsetD8, cuStreamCreate, cuCtxPushCurrent, cuCtxPopCurrent, cuvidCreateDecoder, cuvidDecodePicture, cuvidMapVideoFrame, cuvidUnmapVideoFrame, cuvidDestroyDecoder, cuvidCtxLockCreate, cuvidCtxLockDestroy, cuCtxDestroy
<b>Key Concepts</b>	Graphics Interop, Image Processing, Video Compression
<b>Supported OSes</b>	Linux, Windows
<b>Whitepaper</b>	nvcuvid.pdf

## dct8x8 - DCT8x8

This sample demonstrates how Discrete Cosine Transform (DCT) for blocks of 8 by 8 pixels can be performed using CUDA: a naive implementation by definition and a more traditional approach used in many libraries. As opposed to implementing DCT in a fragment shader, CUDA allows for an easier and more efficient implementation.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Video Compression
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	dct8x8.pdf

## dwtHaar1D - 1D Discrete Haar Wavelet Decomposition

Discrete Haar wavelet decomposition for 1D signals with a length which is a power of 2.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
----------------------------------	--

<b>Key Concepts</b>	Image Processing, Video Compression
<b>Supported OSes</b>	Linux, Windows, OS X

## dxtc - DirectX Texture Compressor (DXTC)

High Quality DXT Compression using CUDA. This example shows how to implement an existing computationally-intensive CPU compression algorithm in parallel on the GPU, and obtain an order of magnitude performance improvement.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Image Compression
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	cuda_dxtc.pdf

## histogram - CUDA Histogram

This sample demonstrates efficient implementation of 64-bin and 256-bin histogram.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Data Parallel Algorithms
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	histogram.pdf

## HSOpticalFlow - Optical Flow

Variational optical flow estimation example. Uses textures for image operations. Shows how simple PDE solver can be accelerated with CUDA.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Data Parallel Algorithms
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	OpticalFlow.pdf

## imageDenoising - Image denoising

This sample demonstrates two adaptive image denoising techniques: KNN and NLM, based on computation of both geometric and color distance between texels. While both techniques are implemented in the DirectX SDK using shaders, massively speeded up variation of the latter technique, taking advantage of shared memory, is implemented in addition to DirectX counterparts.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	imageDenoising.pdf

## postProcessGL - Post-Process in OpenGL

This sample shows how to post-process an image rendered in OpenGL using CUDA.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## recursiveGaussian - Recursive Gaussian Filter

This sample implements a Gaussian blur using Deriche's recursive method. The advantage of this method is that the execution time is independent of the filter width.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCUDA2GL - CUDA and OpenGL Interop of Images

This sample shows how to copy CUDA image back to OpenGL using the most efficient methods.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## SobelFilter - Sobel Filter

This sample implements the Sobel edge detection filter for 8-bit monochrome images.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Image Processing
<b>Supported OSes</b>	Linux, Windows, OS X

## stereoDisparity - Stereo Disparity Computation (SAD SIMD Intrinsics)

A CUDA program that demonstrates how to compute a stereo disparity map using SIMD SAD (Sum of Absolute Difference) intrinsics. Requires Compute Capability 2.0 or higher.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Video Intrinsics
<b>Supported OSes</b>	Linux, Windows, OS X

## 3.5. Finance Reference

### binomialOptions - Binomial Option Pricing

This sample evaluates fair call price for a given set of European options under binomial model.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	binomialOptions.pdf

## binomialOptions\_nvrtc - Binomial Option Pricing with libNVRTC

This sample evaluates fair call price for a given set of European options under binomial model. This sample makes use of NVRTC for Runtime Compilation.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	binomialOptions.pdf

## BlackScholes - Black-Scholes Option Pricing

This sample evaluates fair call and put prices for a given set of European options by Black-Scholes formula.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	BlackScholes.pdf

## BlackScholes\_nvrtc - Black-Scholes Option Pricing with libNVRTC

This sample evaluates fair call and put prices for a given set of European options by Black-Scholes formula, compiling the CUDA kernels involved at runtime using NVRTC.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	<a href="#">NVRTC</a>
<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Computational Finance</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>
<b>Whitepaper</b>	<a href="#">BlackScholes.pdf</a>

## MonteCarloMultiGPU - Monte Carlo Option Pricing with Multi-GPU support

This sample evaluates fair call price for a given set of European options using the Monte Carlo approach, taking advantage of all CUDA-capable GPUs installed in the system. This sample use double precision hardware if a GTX 200 class GPU is present. The sample also takes advantage of CUDA 4.0 capability to supporting using a single CPU thread to control multiple GPUs

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	<a href="#">CURAND</a>
<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>
<b>Whitepaper</b>	<a href="#">MonteCarlo.pdf</a>

## quasirandomGenerator - Niederreiter Quasirandom Sequence Generator

This sample implements Niederreiter Quasirandom Sequence Generator and Inverse Cumulative Normal Distribution functions for the generation of Standard Normal Distributions.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance
<b>Supported OSes</b>	Linux, Windows, OS X

## quasirandomGenerator\_nvrtc - Niederreiter Quasirandom Sequence Generator with libNVRTC

This sample implements Niederreiter Quasirandom Sequence Generator and Inverse Cumulative Normal Distribution functions for the generation of Standard Normal Distributions, compiling the CUDA kernels involved at runtime using NVRTC.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	NVRTC
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance, Runtime Compilation
<b>Supported OSes</b>	Linux, Windows, OS X

## SobolQRNG - Sobol Quasirandom Number Generator

This sample implements Sobol Quasirandom Sequence Generator.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance
<b>Supported OSes</b>	Linux, Windows, OS X

## 3.6. Simulations Reference

### fluidsD3D9 - Fluids (Direct3D Version)

An example of fluid simulation using CUDA and CUFFT, with Direct3D 9 rendering. A Direct3D Capable device is required.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D9SetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, CUFFT Library, Physically-Based Simulation
<b>Supported OSes</b>	Windows

### fluidsGL - Fluids (OpenGL Version)

An example of fluid simulation using CUDA and CUFFT, with OpenGL rendering.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL, CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, CUFFT Library, Physically-Based Simulation
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	fluidsGL.pdf

## nbody - CUDA N-Body Simulation

This sample demonstrates efficient all-pairs simulation of a gravitational n-body simulation in CUDA. This sample accompanies the GPU Gems 3 chapter "Fast N-Body Simulation with CUDA". With CUDA 5.5, performance on Tesla K20c has increased to over 1.8TFLOP/s single precision. Double Performance has also improved on all Kepler and Fermi GPU architectures as well. Starting in CUDA 4.0, the nBody sample has been updated to take advantage of new features to easily scale the n-body simulation across multiple GPUs in a single PC. Adding "-numbodies=<bodies>" to the command line will allow users to set # of bodies for simulation. Adding "-numdevices=<N>" to the command line option will cause the sample to use N devices (if available) for simulation. In this mode, the position and velocity data for all bodies are read from system memory using "zero copy" rather than from device memory. For a small number of devices (4 or fewer) and a large enough number of bodies, bandwidth is not a bottleneck so we can achieve strong scaling across these devices.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms, Physically-Based Simulation
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	nbody_gems3_ch31.pdf

## nbody\_screen - CUDA N-Body Simulation on Screen

This sample demonstrates efficient all-pairs simulation of a gravitational n-body simulation in CUDA. Unlike the OpenGL nbody sample, there is no user interaction.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	screen, GLES
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms, Physically-Based Simulation
<b>Supported OSes</b>	Linux

## oceanFFT - CUDA FFT Ocean Simulation

This sample simulates an Ocean height field using CUFFT Library and renders the result using OpenGL.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL, CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource, cufftPlan2d, cufftExecR2C, cufftExecC2R, cufftDestroy
<b>Key Concepts</b>	Graphics Interop, Image Processing, CUFFT Library
<b>Supported OSes</b>	Linux, Windows, OS X

## particles - Particles

This sample uses CUDA to simulate and visualize a large set of particles and their physical interaction. Adding "-particles=<N>" to the command line will allow users to set # of particles for simulation. This example implements a uniform grid data structure using either atomic operations or a fast radix sort from the Thrust library

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample

will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms, Physically-Based Simulation, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	particles.pdf

## smokeParticles - Smoke Particles

Smoke simulation with volumetric shadows using half-angle slicing technique. Uses CUDA for procedural simulation, Thrust Library for sorting algorithms, and OpenGL for graphics rendering.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaGLSetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms, Physically-Based Simulation
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	smokeParticles.pdf

## VFlockingD3D10

The sample models formation of V-shaped flocks by big birds, such as geese and cranes. The algorithms of such flocking are borrowed from the paper "V-like formations in flocks of artificial birds" from Artificial Life, Vol. 14, No. 2, 2008. The sample has CPU- and GPU-based implementations. Press 'g' to toggle between them. The GPU-based simulation works many times faster than the CPU-based one. The printout in the console window reports the simulation time per step. Press 'r' to reset the initial distribution of birds.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cudaD3D10SetGLDevice, cudaGraphicsMapResources, cudaGraphicsUnmapResources, cudaGraphicsResourceGetMappedPointer, cudaGraphicsRegisterResource, cudaGraphicsGLRegisterBuffer, cudaGraphicsUnregisterResource
<b>Key Concepts</b>	Graphics Interop, Data Parallel Algorithms, Physically-Based Simulation, Performance Strategies
<b>Supported OSes</b>	Windows

## 3.7. Advanced Reference

### alignedTypes - Aligned Types

A simple test, showing huge access speed gap between aligned and misaligned structures.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

### cdpAdvancedQuicksort - Advanced Quicksort (CUDA Dynamic Parallelism)

This sample demonstrates an advanced quicksort implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample

will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## cdpBezierTessellation - Bezier Line Tessellation (CUDA Dynamic Parallelism)

This sample demonstrates bezier tessellation of lines implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## cdpLUDecomposition - LU Decomposition (CUDA Dynamic Parallelism)

This sample demonstrates LU Decomposition implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP, CUBLAS
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3

<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## cdpQuadtree - Quad Tree (CUDA Dynamic Parallelism)

This sample demonstrates Quad Trees implemented using CUDA Dynamic Parallelism. This sample requires devices with compute capability 3.5 or higher.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Dynamic Parallelism
<b>Supported OSes</b>	Linux, Windows, OS X

## concurrentKernels - Concurrent Kernels

This sample demonstrates the use of CUDA streams for concurrent execution of several kernels on devices of compute capability 2.0 or higher. Devices of compute capability 1.x will run the kernels sequentially. It also illustrates how to introduce dependencies between CUDA streams with the new `cudaStreamWaitEvent` function introduced in CUDA 3.2

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## eigenvalues - Eigenvalues

The computation of all or a subset of all eigenvalues is an important problem in Linear Algebra, statistics, physics, and many other fields. This sample demonstrates a parallel implementation of a bisection algorithm for the computation of all eigenvalues of a tridiagonal symmetric matrix of arbitrary size with CUDA.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
----------------------------------	--

<b>Key Concepts</b>	<a href="#">Linear Algebra</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>
<b>Whitepaper</b>	<a href="#">eigenvalues.pdf</a>

## fastWalshTransform - Fast Walsh Transform

Naturally(Hadamard)-ordered Fast Walsh Transform for batching vectors of arbitrary eligible lengths that are power of two in size.

<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Linear Algebra</a> , <a href="#">Data-Parallel Algorithms</a> , <a href="#">Video Compression</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>

## FDTD3d - CUDA C 3D FDTD

This sample applies a finite differences time domain progression stencil on a 3D surface.

<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Performance Strategies</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>

## FunctionPointers - Function Pointers

This sample illustrates how to use function pointers and implements the Sobel Edge Detection filter for 8-bit monochrome images.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	<a href="#">X11</a> , <a href="#">GL</a>
<b>Supported SM Architecture</b>	<a href="#">SM 2.0</a> , <a href="#">SM 3.0</a> , <a href="#">SM 3.2</a> , <a href="#">SM 3.5</a> , <a href="#">SM 3.7</a> , <a href="#">SM 5.0</a> , <a href="#">SM 5.2</a> , <a href="#">SM 5.3</a>
<b>Key Concepts</b>	<a href="#">Graphics Interop</a> , <a href="#">Image Processing</a>
<b>Supported OSes</b>	<a href="#">Linux</a> , <a href="#">Windows</a> , <a href="#">OS X</a>

## interval - Interval Computing

Interval arithmetic operators example. Uses various C++ features (templates and recursion). The recursive mode requires Compute SM 2.0 capabilities.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Recursion, Templates
<b>Supported OSes</b>	Linux, Windows, OS X

## lineOfSight - Line of Sight

This sample is an implementation of a simple line-of-sight algorithm: Given a height map and a ray originating at some observation point, it computes all the points along the ray that are visible from the observation point. The implementation is based on the Thrust library (<http://code.google.com/p/thrust/>).

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Supported OSes</b>	Linux, Windows, OS X

## matrixMulDynlinkJIT - Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version)

This sample revisits matrix multiplication using the CUDA driver API. It demonstrates how to link to CUDA driver at runtime and how to use JIT (just-in-time) compilation from PTX code. It has been written for clarity of exposition to illustrate various CUDA programming principles, not with the goal of providing the most performant generic kernel for matrix multiplication. CUBLAS provides high-performance matrix multiplication.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuModuleLoad, cuModuleLoadDataEx, cuModuleGetFunction, cuMemAlloc, cuMemFree, cuMemcpyHtoD, cuMemcpyDtoH, cuLaunchKernel
<b>Key Concepts</b>	CUDA Driver API, CUDA Dynamically Linked Library
<b>Supported OSes</b>	Linux, Windows, OS X

## mergeSort - Merge Sort

This sample implements a merge sort (also known as Batchner's sort), algorithms belonging to the class of sorting networks. While generally subefficient on large sequences compared to algorithms with better asymptotic algorithmic complexity (i.e. merge sort or radix sort), may be the algorithms of choice for sorting batches of short-to mid-sized (key, value) array pairs. Refer to the excellent tutorial by H. W. Lang <http://www.iti.fh-flensburg.de/lang/algorithmen/sortieren/networks/indexen.htm>

<b>Supported SM</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Architecture</b>	
<b>Key Concepts</b>	Data-Parallel Algorithms
<b>Supported OSes</b>	Linux, Windows, OS X

## newdelete - NewDelete

This sample demonstrates dynamic global memory allocation through device C++ new and delete operators and virtual function declarations available with CUDA 4.0.

<b>Supported SM</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Architecture</b>	
<b>Supported OSes</b>	Linux, Windows, OS X

## ptxjit - PTX Just-in-Time compilation

This sample uses the Driver API to just-in-time compile (JIT) a Kernel from PTX code. Additionally, this sample demonstrates the seamless interoperability capability of the CUDA Runtime and CUDA Driver API calls. For CUDA 5.5, this sample shows how to use cuLink\* functions to link PTX assembly using the CUDA driver at runtime.

<b>Supported SM</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Architecture</b>	
<b>Key Concepts</b>	CUDA Driver API
<b>Supported OSes</b>	Linux, Windows, OS X

## radixSortThrust - CUDA Radix Sort (Thrust Library)

This sample demonstrates a very fast and efficient parallel radix sort uses Thrust library (<http://code.google.com/p/thrust/>). The included RadixSort class can sort either key-value pairs (with float or unsigned integer keys) or keys only. The optimized code in this sample (and also in reduction and scan) uses a technique known as warp-synchronous

programming, which relies on the fact that within a warp of threads running on a CUDA GPU, all threads execute instructions synchronously. The code uses this to avoid `__syncthreads()` when threads within a warp are sharing data via `__shared__` memory. It is important to note that for this to work correctly without race conditions on all GPUs, the shared memory used in these warp-synchronous expressions must be declared volatile. If it is not declared volatile, then in the absence of `__syncthreads()`, the compiler is free to delay stores to `__shared__` memory and keep the data in registers (an optimization technique), which will result in incorrect execution. So please heed the use of volatile in these samples and use it in the same way in any code you derive from them.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	readme.txt

## reduction - CUDA Parallel Reduction

A parallel sum reduction that computes the sum of a large arrays of values. This sample demonstrates several important optimization strategies for 1:Data-Parallel Algorithms like reduction.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## scalarProd - Scalar Product

This sample calculates scalar products of a given set of input vector pairs.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Linear Algebra
<b>Supported OSes</b>	Linux, Windows, OS X

## scan - CUDA Parallel Prefix Sum (Scan)

This example demonstrates an efficient CUDA implementation of parallel prefix sum, also known as "scan". Given an array of numbers, scan computes a new array in which each element is the sum of all the elements before it in the input array.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## segmentationTreeThrust - CUDA Segmentation Tree Thrust Library

This sample demonstrates an approach to the image segmentation trees construction. This method is based on Boruvka's MST algorithm.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## shfl\_scan - CUDA Parallel Prefix Sum with Shuffle Intrinsics (SHFL\_Scan)

This example demonstrates how to use the shuffle intrinsic `__shfl_up` to perform a scan operation across a thread block. A GPU with Compute Capability SM 3.0. is required to run the sample

<b>Supported SM Architecture</b>	SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleHyperQ

This sample demonstrates the use of CUDA streams for concurrent execution of several kernels on devices which provide HyperQ (SM 3.5). Devices without HyperQ (SM 2.0 and SM 3.0) will run a maximum of two kernels concurrently.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Systems Integration, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	HyperQ.pdf

## sortingNetworks - CUDA Sorting Networks

This sample implements bitonic sort and odd-even merge sort (also known as Batcher's sort), algorithms belonging to the class of sorting networks. While generally subefficient, for large sequences compared to algorithms with better asymptotic algorithmic complexity (i.e. merge sort or radix sort), this may be the preferred algorithms of choice for sorting batches of short-sized to mid-sized (key, value) array pairs. Refer to an excellent tutorial by H. W. Lang <http://www.iti.fh-flensburg.de/lang/algorithmen/sortieren/networks/indexen.htm>

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms
<b>Supported OSes</b>	Linux, Windows, OS X

## StreamPriorities - Stream Priorities

This sample demonstrates basic use of stream priorities.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	Stream-Priorities
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	CUDA Streams and Events
<b>Supported OSes</b>	Linux

## threadFenceReduction

This sample shows how to perform a reduction operation on an array of values using the thread Fence intrinsic to produce a single value in a single kernel (as opposed

to two or more kernel calls as shown in the "reduction" CUDA Sample). Single-pass reduction requires global atomic instructions (Compute Capability 2.0 or later) and the `_threadfence()` intrinsic (CUDA 2.2 or later).

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Data-Parallel Algorithms, Performance Strategies
<b>Supported OSes</b>	Linux, Windows, OS X

## threadMigration - CUDA Context Thread Management

Simple program illustrating how to the CUDA Context Management API and uses the new CUDA 4.0 parameter passing and CUDA launch API. CUDA contexts can be created separately and attached independently to different threads.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cuCtxCreate, cuCtxDestroy, cuModuleLoad, cuModuleLoadDataEx, cuModuleGetFunction, cuLaunchKernel, cuMemcpyDtoH, cuCtxPushCurrent, cuCtxPopCurrent
<b>Key Concepts</b>	CUDA Driver API
<b>Supported OSes</b>	Linux, Windows, OS X

## transpose - Matrix Transpose

This sample demonstrates Matrix Transpose. Different performance are shown to achieve high performance.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies, Linear Algebra
<b>Supported OSes</b>	Linux, Windows, OS X
<b>Whitepaper</b>	MatrixTranspose.pdf

## 3.8. Cudalibraries Reference

### batchCUBLAS

A CUDA Sample that demonstrates how using batched CUBLAS API calls to improve overall performance.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUBLAS
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Linear Algebra, CUBLAS Library
<b>Supported OSes</b>	Linux, Windows, OS X

### boxFilterNPP - Box Filter with NPP

A NPP CUDA Sample that demonstrates how to use NPP FilterBox function to perform a Box Filter.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	FreelImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies, Image Processing, NPP Library
<b>Supported OSes</b>	Linux, Windows, OS X

### conjugateGradient - ConjugateGradient

This sample implements a conjugate gradient solver on GPU using CUBLAS and CUSPARSE library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample

will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUBLAS, CUSPARSE
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Linear Algebra, CUBLAS Library, CUSPARSE Library
<b>Supported OSes</b>	Linux, Windows, OS X

## conjugateGradientPrecond - Preconditioned Conjugate Gradient

This sample implements a preconditioned conjugate gradient solver on GPU using CUBLAS and CUSPARSE library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUBLAS, CUSPARSE
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Linear Algebra, CUBLAS Library, CUSPARSE Library
<b>Supported OSes</b>	Linux, Windows, OS X

## conjugateGradientUM - ConjugateGradientUM

This sample implements a conjugate gradient solver on GPU using CUBLAS and CUSPARSE library, using Unified Memory

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	UVM, CUBLAS, CUSPARSE
<b>Supported SM Architecture</b>	SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Unified Memory, Linear Algebra, CUBLAS Library, CUSPARSE Library
<b>Supported OSes</b>	Linux, Windows

## cuHook - CUDA Interception Library

This sample demonstrates how to build and use an intercept library with CUDA.

<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Supported OSes</b>	Linux

## freedImageInteropNPP - FreeImage and NPP Interoperability

A simple CUDA Sample demonstrate how to use FreeImage library with NPP.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	FreeImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies, Image Processing, NPP Library
<b>Supported OSes</b>	Linux, Windows, OS X

## grabcutNPP - GrabCut with NPP

CUDA Implementation of Rother et al. GrabCut approach using the 8 neighborhood NPP Graphcut primitive introduced in CUDA 4.1. (C. Rother, V. Kolmogorov, A. Blake. GrabCut: Interactive Foreground Extraction using Iterated Graph Cuts. ACM Transactions on Graphics (SIGGRAPH'04), 2004)

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL, FreeImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Performance Strategies, Image Processing, NPP Library
<b>Supported OSes</b>	Linux, Windows, OS X

## histEqualizationNPP - Histogram Equalization with NPP

This CUDA Sample demonstrates how to use NPP for histogram equalization for image data.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	FreelImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Performance Strategies, NPP Library
<b>Supported OSes</b>	Linux, Windows, OS X

## imageSegmentationNPP - Image Segmentation using Graphcuts with NPP

This sample that demonstrates how to perform image segmentation using the NPP GraphCut function.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	FreelImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, Performance Strategies, NPP Library
<b>Supported OSes</b>	Linux, Windows, OS X

## jpegNPP - JPEG encode/decode and resize with NPP

This sample demonstrates a simple image processing pipeline. First, a JPEG file is huffman decoded and inverse DCT transformed and dequantized. Then the different planes are resized. Finally, the resized image is quantized, forward DCT transformed and huffman encoded.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	FreelImage, NPP
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	nppGetGpuComputeCapability, nppiDCTInitAlloc, nppiDecodeHuffmanScanHost_JPEG_8u16s_P3R, nppiDCTQuantInv8x8LS_JPEG_16s8u_C1R_NEW, nppiResizeSqrPixel_8u_C1R, nppiEncodeHuffmanGetSize, nppiDCTFree
<b>Supported OSes</b>	Linux, Windows, OS X

## MC\_EstimatePiInlineP - Monte Carlo Estimation of Pi (inline PRNG)

This sample uses Monte Carlo simulation for Estimation of Pi (using inline PRNG). This sample also uses the NVIDIA CURAND library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Random Number Generator, Computational Finance, CURAND Library
<b>Supported OSes</b>	Linux, Windows, OS X

## MC\_EstimatePiInlineQ - Monte Carlo Estimation of Pi (inline QRNG)

This sample uses Monte Carlo simulation for Estimation of Pi (using inline QRNG). This sample also uses the NVIDIA CURAND library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Random Number Generator, Computational Finance, CURAND Library
<b>Supported OSes</b>	Linux, Windows, OS X

## MC\_EstimatePiP - Monte Carlo Estimation of Pi (batch PRNG)

This sample uses Monte Carlo simulation for Estimation of Pi (using batch PRNG). This sample also uses the NVIDIA CURAND library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Random Number Generator, Computational Finance, CURAND Library
<b>Supported OSes</b>	Linux, Windows, OS X

## MC\_EstimatePiQ - Monte Carlo Estimation of Pi (batch QRNG)

This sample uses Monte Carlo simulation for Estimation of Pi (using batch QRNG). This sample also uses the NVIDIA CURAND library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Random Number Generator, Computational Finance, CURAND Library
<b>Supported OSes</b>	Linux, Windows, OS X

## MC\_SingleAsianOptionP - Monte Carlo Single Asian Option

This sample uses Monte Carlo to simulate Single Asian Options using the NVIDIA CURAND library.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Random Number Generator, Computational Finance, CURAND Library
<b>Supported OSES</b>	Linux, Windows, OS X

## MersenneTwisterGP11213

This sample demonstrates the Mersenne Twister random number generator GP11213 in cuRAND.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Computational Finance, CURAND Library
<b>Supported OSES</b>	Linux, Windows, OS X

## randomFog - Random Fog

This sample illustrates pseudo- and quasi- random numbers produced by CURAND.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	X11, GL, CURAND
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	3D Graphics, CURAND Library
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCUBLAS - Simple CUBLAS

Example of using CUBLAS using the new CUBLAS API interface available in CUDA 4.0.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUBLAS
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, CUBLAS Library
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCUFFT - Simple CUFFT

Example of using CUFFT. In this example, CUFFT is used to compute the 1D-convolution of some signal with some filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, CUFFT Library
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCUFFT\_2d\_MGPU - SimpleCUFFT\_2d\_MGPU

Example of using CUFFT. In this example, CUFFT is used to compute the 1D-convolution of some signal with some filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain on Multiple GPU.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, CUFFT Library
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleCUFFT\_callback - Simple CUFFT Callbacks

Example of using CUFFT. In this example, CUFFT is used to compute the 1D-convolution of some signal with some filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain. The difference between this example and the Simple CUFFT example is that the multiplication step is done by the CUFFT kernel with a user-supplied CUFFT callback routine, rather than by a separate kernel call.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	callback, CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, CUFFT Library
<b>Supported OSes</b>	Linux

## simpleCUFFT\_MGPU - Simple CUFFT\_MGPU

Example of using CUFFT. In this example, CUFFT is used to compute the 1D-convolution of some signal with some filter by transforming both into frequency domain, multiplying them together, and transforming the signal back to time domain on Multiple GPU.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CUFFT
<b>Supported SM Architecture</b>	SM 2.0, SM 3.0, SM 3.2, SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>Key Concepts</b>	Image Processing, CUFFT Library
<b>Supported OSes</b>	Linux, Windows, OS X

## simpleDevLibCUBLAS - simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)

This sample implements a simple CUBLAS function calls that call GPU device API library running CUBLAS functions. This sample requires a SM 3.5 capable device.

This sample depends on other applications or libraries to be present on the system to either build or run. If these dependencies are not available on the system, the sample will not be installed. If these dependencies are available, but not installed, the sample will waive itself at build time.

<b>Dependencies</b>	CDP, CUBLAS
<b>Supported SM Architecture</b>	SM 3.5, SM 3.7, SM 5.0, SM 5.2, SM 5.3
<b>CUDA API</b>	cublasCreate, cublasSetVector, cublasSgemm, cudaMalloc, cudaFree, cudaMemcpy
<b>Key Concepts</b>	CUDA Dynamic Parallelism, Linear Algebra
<b>Supported OSes</b>	Linux, Windows, OS X

# Chapter 4.

## DEPENDENCIES

Some CUDA Samples rely on third-party applications and/or libraries, or features provided by the CUDA Toolkit and Driver, to either build or execute. These dependencies are listed below.

If a sample has a dependency that is not available on the system, the sample will not be installed. If a sample has a third-party dependency that is available on the system, but is not installed, the sample will waive itself at build time.

Each sample's dependencies are listed in the [Samples Reference](#) section.

## Third-Party Dependencies

These third-party dependencies are required by some CUDA samples. If available, these dependencies are either installed on your system automatically, or are installable via your system's package manager (Linux) or a third-party website.

### FreeImage

FreeImage is an open source imaging library. FreeImage can usually be installed on Linux using your distribution's package manager system. FreeImage can also be downloaded from the [FreeImage website](#). FreeImage is also redistributed with the CUDA Samples.

### Message Passing Interface

MPI (Message Passing Interface) is an API for communicating data between distributed processes. A MPI compiler can be installed using your Linux distribution's package manager system. It is also available on some online resources, such as [Open MPI](#).

### Only 64-Bit

Some samples can only be run on a 64-bit operating system.

## DirectX

DirectX is a collection of APIs designed to allow development of multimedia applications on Microsoft platforms. For Microsoft platforms, NVIDIA's CUDA Driver supports DirectX. Several CUDA Samples for Windows demonstrates CUDA-DirectX Interoperability, for building such samples one needs to install [Direct X SDK \(June 2010 or newer\)](#), this is required to be installed only on Windows 7 and Windows Server 2008, Other Windows OSes do not need to explicitly install the DirectX SDK.

Samples which require the DirectX SDK include: **simpleD3D9**, **simpleD3D9Texture**, **simpleD3D10**, **simpleD3D10RenderTarget**, **simpleD3D10Texture**, **simpleD3D11Texture**, **SLID3D10Texture**, **cudaDecodeD3D9**, **fluidsD3D9**, and **VFlockingD3D10**.

## OpenGL

OpenGL is a graphics library used for 2D and 3D rendering. On systems which support OpenGL, NVIDIA's OpenGL implementation is provided with the CUDA Driver.

## OpenGL ES

OpenGL ES is an embedded systems graphics library used for 2D and 3D rendering. On systems which support OpenGL ES, NVIDIA's OpenGL ES implementation is provided with the CUDA Driver.

## OpenMP

OpenMP is an API for multiprocessing programming. OpenMP can be installed using your Linux distribution's package manager system. It usually comes preinstalled with GCC. It can also be found at the [OpenMP website](#).

## Screen

Screen is a windowing system found on the QNX operating system. Screen is usually found as part of the root filesystem.

## X11

X11 is a windowing system commonly found on \*-nix style operating systems. X11 can be installed using your Linux distribution's package manager, and comes preinstalled on Mac OS X systems.

## CUDA Features

These CUDA features are needed by some CUDA samples. They are provided by either the CUDA Toolkit or CUDA Driver. Some features may not be available on your system.

## CUFFT Callback Routines

CUFFT Callback Routines are user-supplied kernel routines that CUFFT will call when loading or storing data. These callback routines are only available on Linux x86\_64 and ppc64le systems.

## CUDA Dynamic Paralellism

CDP (CUDA Dynamic Paralellism) allows kernels to be launched from threads running on the GPU. CDP is only available on GPUs with SM architecture of 3.5 or above.

## CUBLAS

CUBLAS (CUDA Basic Linear Algebra Subroutines) is a GPU-accelerated version of the BLAS library.

## CUDA Interprocess Communication

IPC (Interprocess Communication) allows processes to share device pointers. IPC is only available on Linux x86\_64 and ppc64le systems.

## CUFFT

CUFFT (CUDA Fast Fourier Transform) is a GPU-accelerated FFT library.

## CURAND

CURAND (CUDA Random Number Generation) is a GPU-accelerated RNG library.

## CUSPARSE

CUSPARSE (CUDA Sparse Matrix) provides linear algebra subroutines used for sparse matrix calculations.

## NPP

NPP (NVIDIA Performance Primitives) provides GPU-accelerated image, video, and signal processing functions.

## NVRTC

NVRTC (CUDA RunTime Compilation) is a runtime compilation library for CUDA C++.

## NVCUVID

NVCUVID (NVIDIA CUDA Video Decoder) provides GPU-accelerated video decoding capabilities.

## Stream Priorities

Stream Priorities allows the creation of streams with specified priorities. Stream Priorities is only available on GPUs with SM architecture of 3.5 or above.

## Unified Virtual Memory

UVM (Unified Virtual Memory) enables memory that can be accessed by both the CPU and GPU without explicit copying between the two. UVM is only available on Linux and Windows systems.

# Chapter 5.

## KEY CONCEPTS AND ASSOCIATED SAMPLES

The tables below describe the key concepts of the CUDA Toolkit and lists the samples that illustrate how that concept is used.

### Basic Key Concepts

*Basic Concepts demonstrates how to make use of CUDA features.*

Table 2 Basic Key Concepts and Associated Samples

Basic Key Concept	Description	Samples
3D Graphics	<i>3D Rendering</i>	Random Fog, Simple Direct3D10 (Vertex Array), Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen
3D Textures	<i>Volume Textures</i>	Simple Texture 3D
Assert	<i>GPU Assert</i>	simpleAssert, simpleAssert with libNVRTC
Asynchronous Data Transfers	<i>Overlapping I/O and Compute</i>	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Multi Copy and Compute, Simple Multi-GPU, Simple Peer-to-Peer Transfers with Multi-GPU, asyncAPI, simpleStreams
Atomic Intrinsics	<i>Using atomics with GPU kernels</i>	Simple Atomic Intrinsics, Simple Atomic Intrinsics with libNVRTC
C++ Function Overloading	<i>Use C++ overloading with GPU kernels</i>	cppOverload

Basic Key Concept	Description	Samples
C++ Templates	<i>Using Templates with GPU kernels</i>	Simple Templates, Simple Templates with libNVRTC
CUBLAS	<i>CUDA BLAS samples</i>	Matrix Multiplication (CUBLAS), Unified Memory Streams
CUBLAS Library	<i>CUDA BLAS samples</i>	Simple CUBLAS, batchCUBLAS
CUDA Data Transfers	<i>CUDA Data I/O</i>	Template using CUDA Runtime
CUDA Driver API	<i>Samples that show the CUDA Driver API</i>	Device Query Driver API, Matrix Multiplication (CUDA Driver API Version), Simple Texture (Driver Version), Simple Vector Intrinsics with libNVRTC, Using Inline PTX, Using Inline PTX with libNVRTC, Vector Addition Driver API, Vector Addition with libNVRTC
CUDA Dynamic Parallelism	<i>Dynamic Parallelism with GPU Kernels (SM 3.5)</i>	Simple Print (CUDA Dynamic Parallelism), simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
CUDA Runtime API	<i>Samples that use the Runtime API</i>	Device Query, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Simple Texture, Vector Addition
CUDA Streams	<i>Stream API defines a sequence of operations that can be overlapped with I/O</i>	Simple CUDA Callbacks
CUDA Streams and Events	<i>Synchronizing Kernels with Event Timers and Streams</i>	Bandwidth Test, Simple Multi Copy and Compute, Simple Multi-GPU, Unified Memory Streams, asyncAPI, cppOverload, simpleStreams
CUDA Systems Integration	<i>Samples that integrate with Multi Process (OpenMP, IPC, and MPI)</i>	Unified Memory Streams, cudaOpenMP, simpleIPC, simpleMPI

Basic Key Concept	Description	Samples
CUFFT Library	<i>Samples that use the CUDA FFT accelerated library</i>	Simple CUFFT, Simple CUFFT Callbacks, Simple CUFFT_MGPU, SimpleCUFFT_2d_MGPU
CURAND Library	<i>Samples that use the CUDA random number generator</i>	MersenneTwisterGP11213, Random Fog
Callback Functions	<i>Creating Callback functions with GPU kernels</i>	Simple CUDA Callbacks
Computational Finance	<i>Finance Algorithms</i>	Black-Scholes Option Pricing, Black-Scholes Option Pricing with libNVRTC, MersenneTwisterGP11213
Data Parallel Algorithms	<i>Samples that show good usage of Data Parallel Algorithms</i>	CUDA Separable Convolution, Texture-based Separable Convolution
Debugging	<i>Samples useful for debugging</i>	simplePrintf
Device Memory Allocation	<i>Samples that show GPU Device side memory allocation</i>	Template, Template using CUDA Runtime
Device Query	<i>Sample showing simple device query of information</i>	Device Query, Device Query Driver API
GPU Performance	<i>Samples demonstrating high performance and data I/O</i>	Simple Multi Copy and Compute
Graphics Interop	<i>Samples that demonstrate interop between graphics APIs and CUDA</i>	Bicubic B-spline Interpolation, Bilateral Filter, Box Filter, CUDA and OpenGL Interop of Images, Simple D3D10 Texture, Simple D3D11 Texture, Simple D3D9 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target, Simple Direct3D9 (Vertex Arrays), Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen, Simple Texture 3D
Image Processing	<i>Samples that demonstrate image processing algorithms in CUDA</i>	Bicubic B-spline Interpolation, Bilateral Filter, Box Filter, Box Filter with NPP, CUDA Separable Convolution, CUDA and OpenGL Interop of Images, FreeImage and NPP Interopability, GrabCut with NPP, Histogram Equalization with NPP, Image Segmentation

Basic Key Concept	Description	Samples
		using Graphcuts with NPP, Pitch Linear Texture, Simple CUBLAS, Simple CUFFT, Simple CUFFT Callbacks, Simple CUFFT_MGPU, Simple D3D11 Texture, Simple Surface Write, Simple Texture, Simple Texture (Driver Version), Simple Texture 3D, SimpleCUFFT_2d_MGPU, Texture-based Separable Convolution
InterProcess Communication	<i>Samples that demonstrate Inter Process Communication between processes</i>	simpleIPC
Linear Algebra	<i>Samples demonstrating linear algebra with CUDA</i>	Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, batchCUBLAS, simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
MPI	<i>Samples demonstrating how to use CUDA with MPI programs</i>	simpleMPI
Matrix Multiply	<i>Samples demonstrating matrix multiply CUDA</i>	Matrix Multiplication (CUDA Driver API Version)
Multi-GPU	<i>Samples demonstrating how to take advantage of multiple GPUs and CUDA</i>	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Multi-GPU, Simple Peer-to-Peer Transfers with Multi-GPU
Multithreading	<i>Samples demonstrating how to use multithreading with CUDA</i>	Simple CUDA Callbacks, Simple Multi-GPU, Unified Memory Streams, cudaOpenMP, simpleMPI
NPP Library	<i>Samples demonstrating how to use NPP (NVIDIA Performance Primitives) for image processing</i>	Box Filter with NPP, FreedImage and NPP Interopability, GrabCut with NPP, Histogram Equalization with NPP, Image Segmentation using Graphcuts with NPP
Occupancy Calculator		simpleOccupancy
OpenMP	<i>Samples demonstrating how to use OpenMP</i>	Unified Memory Streams, cudaOpenMP

Basic Key Concept	Description	Samples
Overlap Compute and Copy	<i>Samples demonstrating how to overlap Compute and Data I/O</i>	Simple Multi Copy and Compute
PTX Assembly	<i>Samples demonstrating how to use PTX code with CUDA</i>	Using Inline PTX, Using Inline PTX with libNVRTC
Peer to Peer	<i>Samples demonstrating how to handle P2P data transfers between multiple GPUs</i>	simpleIPC
Peer to Peer Data Transfers	<i>Samples demonstrating how to handle P2P data transfers between multiple GPUs</i>	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
Performance Strategies	<i>Samples demonstrating high performance with CUDA</i>	Bandwidth Test, Box Filter with NPP, CUDA and OpenGL Interop of Images, Clock, Clock libNVRTC, FreeImage and NPP Interopability, GrabCut with NPP, Histogram Equalization with NPP, Image Segmentation using Graphcuts with NPP, Matrix Multiplication (CUBLAS), Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU, Using Inline PTX, Using Inline PTX with libNVRTC, simpleZeroCopy
Pinned System Paged Memory	<i>Samples demonstrating how to properly handle data I/O efficiently between the CPU host and GPU video memory</i>	simpleZeroCopy
Separate Compilation	<i>Samples demonstrating how to use CUDA library linking</i>	Simple Static GPU Device Library
Surface Writes	<i>Samples demonstrating how to use Surface Writes with GPU kernels</i>	Simple Surface Write, Simple Texture 3D
Texture	<i>Samples demonstrating how to use textures GPU kernels</i>	Pitch Linear Texture, Simple Cubemap Texture, Simple D3D10 Texture, Simple D3D9 Texture, Simple Direct3D10 Render Target, Simple Layered Texture, Simple Surface Write, Simple Texture, Simple Texture (Driver Version), Texture-based Separable Convolution

Basic Key Concept	Description	Samples
Unified Memory	<i>Samples demonstrating how to use Unified Memory</i>	ConjugateGradientUM, Unified Memory Streams
Unified Virtual Address Space	<i>Samples demonstrating how to use UVA with CUDA programs</i>	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
Vector Addition	<i>Samples demonstrating how to use Vector Addition with CUDA programs</i>	Vector Addition, Vector Addition Driver API, Vector Addition with libNVRTC, simpleZeroCopy
Vertex Buffers	<i>Samples demonstrating how to use Vertex Buffers with CUDA kernels</i>	Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen
Volume Processing	<i>Samples demonstrating how to use 3D Textures for volume rendering</i>	Simple Cubemap Texture, Simple Layered Texture
Vote Intrinsic	<i>Samples demonstrating how to use vote intrinsic with CUDA</i>	Simple Vote Intrinsic, Simple Vote Intrinsic with libNVRTC

## Advanced Key Concepts

*Advanced Concepts demonstrate advanced techniques and algorithms implemented with CUDA.*

**Table 3** Advanced Key Concepts and Associated Samples

Advanced Key Concept	Description	Samples
2D Textures	<i>Texture Mapping</i>	SLI D3D10 Texture
3D Graphics	<i>3D Rendering</i>	Marching Cubes Isosurfaces
3D Textures	<i>Volume Textures</i>	Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
CUBLAS Library	<i>CUDA BLAS samples</i>	ConjugateGradient, ConjugateGradientUM, Preconditioned Conjugate Gradient
CUDA Driver API	<i>Samples that show the CUDA Driver API</i>	CUDA Context Thread Management, Matrix Multiplication (CUDA Driver API version)

Advanced Key Concept	Description	Samples
		with Dynamic Linking Version), PTX Just-in-Time compilation
CUDA Dynamic Parallelism	<i>Dynamic Parallelism with GPU Kernels (SM 3.5)</i>	Advanced Quicksort (CUDA Dynamic Parallelism), Bezier Line Tessellation (CUDA Dynamic Parallelism), LU Decomposition (CUDA Dynamic Parallelism), Quad Tree (CUDA Dynamic Parallelism), Simple Quicksort (CUDA Dynamic Parallelism)
CUDA Dynamically Linked Library	<i>Dynamic loading of the CUDA DLL using CUDA Driver API</i>	Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version)
CUDA Streams and Events	<i>Synchronizing Kernels with Event Timers and Streams</i>	Stream Priorities
CUDA Systems Integration	<i>Samples that integrate with Multi Process (OpenMP, IPC, and MPI)</i>	simpleHyperQ
CUFFT Library	<i>Samples that use the CUDA FFT accelerated library</i>	CUDA FFT Ocean Simulation, FFT-Based 2D Convolution, Fluids (Direct3D Version), Fluids (OpenGL Version)
CURAND Library	<i>Samples that use the CUDA random number generator</i>	Monte Carlo Estimation of Pi (batch PRNG), Monte Carlo Estimation of Pi (batch QRNG), Monte Carlo Estimation of Pi (inline PRNG), Monte Carlo Estimation of Pi (inline QRNG) , Monte Carlo Single Asian Option
CUSPARSE Library	<i>Samples that use the cuSPARSE (Sparse Vector Matrix Multiply) functions</i>	ConjugateGradient, ConjugateGradientUM, Preconditioned Conjugate Gradient
Computational Finance	<i>Finance Algorithms</i>	Binomial Option Pricing, Binomial Option Pricing with libNVRTC, Monte Carlo Estimation of Pi (batch PRNG), Monte Carlo Estimation of Pi (batch QRNG), Monte Carlo Estimation of Pi (inline PRNG), Monte Carlo Estimation of Pi (inline QRNG) , Monte Carlo Single Asian Option,

Advanced Key Concept	Description	Samples
		Niederreiter Quasirandom Sequence Generator, Niederreiter Quasirandom Sequence Generator with libNVRTC, Sobol Quasirandom Number Generator
Data Parallel Algorithms	<i>Samples that show good usage of Data Parallel Algorithms</i>	CUDA Histogram, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, Mandelbrot, Optical Flow, Particles, Smoke Particles, VFlockingD3D10
Data-Parallel Algorithms	<i>Samples that show good usage of Data Parallel Algorithms</i>	CUDA Parallel Prefix Sum (Scan), CUDA Parallel Prefix Sum with Shuffle Intrinsics (SHFL_Scan), CUDA Parallel Reduction, CUDA Radix Sort (Thrust Library), CUDA Segmentation Tree Thrust Library, CUDA Sorting Networks, Fast Walsh Transform, Merge Sort, threadFenceReduction
Graphics Interop	<i>Samples that demonstrate interop between graphics APIs and CUDA</i>	Bindless Texture, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Fluids (Direct3D Version), Fluids (OpenGL Version), Function Pointers, Mandelbrot, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, SLI D3D10 Texture, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
Image Compression	<i>Samples that demonstrate image and video compression</i>	DirectX Texture Compressor (DXTC)
Image Processing	<i>Samples that demonstrate image processing algorithms in CUDA</i>	1D Discrete Haar Wavelet Decomposition, CUDA FFT Ocean Simulation, CUDA Histogram, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, DCT8x8, DirectX Texture Compressor (DXTC), FFT-Based 2D Convolution, Function Pointers, Image denoising, Optical Flow, Post-Process in OpenGL, Recursive Gaussian

Advanced Key Concept	Description	Samples
		Filter, SLI D3D10 Texture, Sobel Filter, Stereo Disparity Computation (SAD SIMD Intrinsics), Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
Linear Algebra	<i>Samples demonstrating linear algebra with CUDA</i>	ConjugateGradient, ConjugateGradientUM, Eigenvalues, Fast Walsh Transform, Matrix Transpose, Preconditioned Conjugate Gradient, Scalar Product
OpenGL Graphics Interop	<i>Samples demonstrating how to use interoperability CUDA with OpenGL</i>	Marching Cubes Isosurfaces
Performance Strategies	<i>Samples demonstrating high performance with CUDA</i>	Aligned Types, CUDA C 3D FDTD, CUDA Parallel Prefix Sum (Scan), CUDA Parallel Prefix Sum with Shuffle Intrinsics (SHFL_Scan), CUDA Parallel Reduction, CUDA Radix Sort (Thrust Library), CUDA Segmentation Tree Thrust Library, Concurrent Kernels, Matrix Transpose, Particles, SLI D3D10 Texture, VFlockingD3D10, simpleHyperQ, threadFenceReduction
Physically Based Simulation	<i>Samples demonstrating high performance collisions and/or physocal interactions</i>	Marching Cubes Isosurfaces
Physically-Based Simulation	<i>Samples demonstrating high performance collisions and/or physocal interactions</i>	CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, Fluids (Direct3D Version), Fluids (OpenGL Version), Particles, Smoke Particles, VFlockingD3D10
Random Number Generator	<i>Samples demonstrating how to use random number generation with CUDA</i>	Monte Carlo Estimation of Pi (batch PRNG), Monte Carlo Estimation of Pi (batch QRNG), Monte Carlo Estimation of Pi (inline PRNG), Monte Carlo Estimation of Pi (inline QRNG) , Monte Carlo Single Asian Option
Recursion	<i>Samples demonstrating recursion on CUDA</i>	Interval Computing

Advanced Key Concept	Description	Samples
Runtime Compilation		Clock libNVRTC, Matrix Multiplication with libNVRTC, Niederreiter Quasirandom Sequence Generator with libNVRTC, Simple Atomic Intrinsic with libNVRTC, Simple Templates with libNVRTC, Simple Vote Intrinsic with libNVRTC, Using Inline PTX with libNVRTC, Vector Addition with libNVRTC, simpleAssert with libNVRTC
Surface Writes	<i>Samples demonstrating how to use Surface Writes with GPU kernels</i>	Volumetric Filtering with 3D Textures and Surface Writes
Templates	<i>Samples demonstrating how to use templates GPU kernels</i>	Interval Computing
Texture	<i>Samples demonstrating how to use textures GPU kernels</i>	Bindless Texture
Vertex Buffers	<i>Samples demonstrating how to use Vertex Buffers with CUDA kernels</i>	Marching Cubes Isosurfaces
Video Compression	<i>Samples demonstrating how to use video compression with CUDA</i>	1D Discrete Haar Wavelet Decomposition, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, DCT8x8, Fast Walsh Transform
Video Intrinsic	<i>Samples demonstrating how to use video intrinsic with CUDA</i>	Stereo Disparity Computation (SAD SIMD Intrinsic)

# Chapter 6.

## CUDA API AND ASSOCIATED SAMPLES

The tables below list the samples associated with each CUDA API.

### CUDA Driver API Samples

The table below lists the samples associated with each CUDA Driver API.

Table 4 CUDA Driver API and Associated Samples

CUDA Driver API	Samples
cuArrayCreate	Simple Texture (Driver Version)
cuArrayDestroy	Simple Texture (Driver Version)
cuCtxCreate	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxDestroy	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxDetach	Simple Texture (Driver Version)
cuCtxPopCurrent	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxPushCurrent	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxSynchronize	Simple Texture (Driver Version)
cuD3D9CtxCreate	CUDA Video Decoder D3D9 API
cuD3D9GetDevice	CUDA Video Decoder D3D9 API
cuD3D9MapResources	CUDA Video Decoder D3D9 API

CUDA Driver API	Samples
cuD3D9RegisterResource	CUDA Video Decoder D3D9 API
cuD3D9ResourceGetMappedPitch	CUDA Video Decoder D3D9 API
cuD3D9ResourceGetMappedPointer	CUDA Video Decoder D3D9 API
cuD3D9ResourceSetMapFlags	CUDA Video Decoder D3D9 API
cuD3D9UnmapResources	CUDA Video Decoder D3D9 API
cuD3D9UnregisterResource	CUDA Video Decoder D3D9 API
cuDeviceComputeCapability	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGet	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuDeviceGetAttribute	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGetCount	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGetName	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuDeviceTotalMem	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDriverGetVersion	Device Query Driver API
cuGLCtxCreate	CUDA Video Decoder GL API
cuGLGetDevice	CUDA Video Decoder GL API
cuGLMapResources	CUDA Video Decoder GL API
cuGLRegisterResource	CUDA Video Decoder GL API
cuGLResourceGetMappedPitch	CUDA Video Decoder GL API
cuGLResourceGetMappedPointer	CUDA Video Decoder GL API
cuGLResourceSetMapFlags	CUDA Video Decoder GL API
cuGLUnmapResources	CUDA Video Decoder GL API
cuGLUnregisterResource	CUDA Video Decoder GL API
culnit	Device Query Driver API

CUDA Driver API	Samples
cuLaunchGridAsync	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuLaunchKernel	CUDA Context Thread Management, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuMemAlloc	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuMemAllocHost	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemFree	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuMemFreeHost	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemcpy2D	Simple Texture (Driver Version)
cuMemcpyDtoH	CUDA Context Thread Management, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuMemcpyDtoHAsync	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemcpyHtoD	Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Vector Addition Driver API
cuMemsetD8	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuModuleGetFunction	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuModuleGetGlobal	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API

CUDA Driver API	Samples
cuModuleGetTexRef	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Simple Texture (Driver Version)
cuModuleLoad	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuModuleLoadDataEx	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuModuleUnload	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetSize	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetTexRef	Simple Texture (Driver Version)
cuParamSeti	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetv	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuStreamCreate	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuTexRefSetAddressMode	Simple Texture (Driver Version)
cuTexRefSetArray	Simple Texture (Driver Version)
cuTexRefSetFilterMode	Simple Texture (Driver Version)
cuTexRefSetFlags	Simple Texture (Driver Version)
cuTexRefSetFormat	Simple Texture (Driver Version)
cuidCreateDecoder	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidCtxLockCreate	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidCtxLockDestroy	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidDecodePicture	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidDestroyDecoder	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidMapVideoFrame	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API

CUDA Driver API	Samples
cuvidUnmapVideoFrame	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API

## CUDA Runtime API Samples

The table below lists the samples associated with each CUDA Runtime API.

Table 5 CUDA Runtime API and Associated Samples

CUDA Runtime API	Samples
cuArrayCreate	Simple Texture (Driver Version)
cuArrayDestroy	Simple Texture (Driver Version)
cuCtxCreate	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxDestroy	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxDetach	Simple Texture (Driver Version)
cuCtxPopCurrent	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxPushCurrent	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuCtxSynchronize	Simple Texture (Driver Version)
cuD3D9CtxCreate	CUDA Video Decoder D3D9 API
cuD3D9GetDevice	CUDA Video Decoder D3D9 API
cuD3D9MapResources	CUDA Video Decoder D3D9 API
cuD3D9RegisterResource	CUDA Video Decoder D3D9 API
cuD3D9ResourceGetMappedPitch	CUDA Video Decoder D3D9 API
cuD3D9ResourceGetMappedPointer	CUDA Video Decoder D3D9 API
cuD3D9ResourceSetMapFlags	CUDA Video Decoder D3D9 API
cuD3D9UnmapResources	CUDA Video Decoder D3D9 API
cuD3D9UnregisterResource	CUDA Video Decoder D3D9 API

CUDA Runtime API	Samples
cuDeviceComputeCapability	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGet	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuDeviceGetAttribute	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGetCount	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDeviceGetName	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuDeviceTotalMem	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Device Query Driver API
cuDriverGetVersion	Device Query Driver API
cuGLCtxCreate	CUDA Video Decoder GL API
cuGLGetDevice	CUDA Video Decoder GL API
cuGLMapResources	CUDA Video Decoder GL API
cuGLRegisterResource	CUDA Video Decoder GL API
cuGLResourceGetMappedPitch	CUDA Video Decoder GL API
cuGLResourceGetMappedPointer	CUDA Video Decoder GL API
cuGLResourceSetMapFlags	CUDA Video Decoder GL API
cuGLUnmapResources	CUDA Video Decoder GL API
cuGLUnregisterResource	CUDA Video Decoder GL API
culnit	Device Query Driver API
cuLaunchGridAsync	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuLaunchKernel	CUDA Context Thread Management, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuMemAlloc	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Simple Vote

CUDA Runtime API	Samples
	Intrinsics with libNVRTC, Vector Addition Driver API, Vector Addition with libNVRTC
cuMemAllocHost	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemFree	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Simple Vote Intrinsics with libNVRTC, Vector Addition Driver API, Vector Addition with libNVRTC
cuMemFreeHost	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemcpy2D	Simple Texture (Driver Version)
cuMemcpyDtoH	CUDA Context Thread Management, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API, Vector Addition with libNVRTC
cuMemcpyDtoHAsync	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuMemcpyHtoD	Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Vote Intrinsics with libNVRTC, Vector Addition Driver API, Vector Addition with libNVRTC
cuMemsetD8	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuModuleGetFunction	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuModuleGetGlobal	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuModuleGetTexRef	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Simple Texture (Driver Version)
cuModuleLoad	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API

CUDA Runtime API	Samples
cuModuleLoadDataEx	CUDA Context Thread Management, CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API, Matrix Multiplication (CUDA Driver API Version), Matrix Multiplication (CUDA Driver API version with Dynamic Linking Version), Simple Texture (Driver Version), Vector Addition Driver API
cuModuleUnload	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetSize	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetTexRef	Simple Texture (Driver Version)
cuParamSeti	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuParamSetv	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuStreamCreate	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuTexRefSetAddressMode	Simple Texture (Driver Version)
cuTexRefSetArray	Simple Texture (Driver Version)
cuTexRefSetFilterMode	Simple Texture (Driver Version)
cuTexRefSetFlags	Simple Texture (Driver Version)
cuTexRefSetFormat	Simple Texture (Driver Version)
cublasCreate	Matrix Multiplication (CUBLAS), simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
cublasSetVector	simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
cublasSgemm	Matrix Multiplication (CUBLAS), simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
cudaBindSurfaceToArray	Simple Surface Write
cudaBindTexture2D	Pitch Linear Texture
cudaBindTextureToArray	Pitch Linear Texture, Simple Cubemap Texture, Simple Layered Texture, Simple Surface Write, Simple Texture
cudaCreateChannelDesc	Pitch Linear Texture, Simple Cubemap Texture, Simple Layered Texture, Simple Surface Write, Simple Texture
cudaD3D10GetDevice	SLI D3D10 Texture, Simple D3D10 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target

CUDA Runtime API	Samples
cudaD3D10SetDirect3DDevice	SLI D3D10 Texture, Simple D3D10 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target
cudaD3D10SetGLDevice	VFlockingD3D10
cudaD3D11GetDevice	Simple D3D11 Texture
cudaD3D11SetDirect3DDevice	Simple D3D11 Texture
cudaD3D9GetDevice	Simple D3D9 Texture, Simple Direct3D9 (Vertex Arrays)
cudaD3D9SetDirect3DDevice	Simple D3D9 Texture, Simple Direct3D9 (Vertex Arrays)
cudaD3D9SetGLDevice	Fluids (Direct3D Version)
cudaDeviceCanAccessPeer	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
cudaDeviceDisablePeerAccess	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
cudaDeviceEnablePeerAccess	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
cudaDeviceSynchronize	Bandwidth Test, Template, Template using CUDA Runtime
cudaDriverGetVersion	Device Query
cudaEventCreate	Bandwidth Test, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Simple Multi Copy and Compute, Simple Multi-GPU, Vector Addition, asyncAPI, simpleStreams, simpleZeroCopy
cudaEventCreateWithFlags	Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Peer-to-Peer Transfers with Multi-GPU
cudaEventDestroy	Bandwidth Test, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Simple Multi Copy and Compute, Simple Multi-GPU, Vector Addition, asyncAPI, simpleStreams, simpleZeroCopy
cudaEventElapsedTime	Bandwidth Test, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Multi Copy and Compute, Simple Multi-GPU, Simple Peer-to-Peer Transfers

CUDA Runtime API	Samples
	with Multi-GPU, Vector Addition, asyncAPI, simpleStreams, simpleZeroCopy
cudaEventQuery	Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Simple Multi Copy and Compute, Simple Multi-GPU, Vector Addition, asyncAPI, simpleStreams, simpleZeroCopy
cudaEventRecord	Bandwidth Test, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Simple Multi Copy and Compute, Simple Multi-GPU, Vector Addition, asyncAPI, simpleStreams, simpleZeroCopy
cudaEventSynchronize	Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Vector Addition
cudaFree	Bandwidth Test, C++ Integration, Clock, Clock libNVRTC, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Pitch Linear Texture, Simple Atomic Intrinsic, Simple Atomic Intrinsic with libNVRTC, Simple Cubemap Texture, Simple Layered Texture, Simple Surface Write, Simple Texture, Simple Vote Intrinsic, Template, Template using CUDA Runtime, Using Inline PTX, Using Inline PTX with libNVRTC, Vector Addition, cudaOpenMP, simpleAssert, simpleAssert with libNVRTC, simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism), simpleMPI
cudaFreeArray	Pitch Linear Texture, Simple Cubemap Texture, Simple Layered Texture, Simple Surface Write, Simple Texture
cudaFreeHost	Bandwidth Test, Simple Atomic Intrinsic, Simple Atomic Intrinsic with libNVRTC, Simple Vote Intrinsic, Template using CUDA Runtime, Using Inline PTX, Using Inline PTX with libNVRTC, simpleAssert, simpleAssert with libNVRTC, simpleIPC, simpleZeroCopy
cudaFuncGetAttributes	cppOverload
cudaFuncSetCacheConfig	cppOverload
cudaGLSetGLDevice	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (OpenGL Version),

CUDA Runtime API	Samples
	Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple Texture 3D, Smoke Particles, Sobel Filter, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGetDeviceCount	Device Query
cudaGetDeviceProperties	Device Query
cudaGraphicsD3D10RegisterResource	SLI D3D10 Texture, Simple D3D10 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target
cudaGraphicsD3D11RegisterResource	Simple D3D11 Texture
cudaGraphicsD3D9RegisterResource	Simple D3D9 Texture, Simple Direct3D9 (Vertex Arrays)
cudaGraphicsGLRegisterBuffer	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D Version), Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGraphicsMapResources	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D Version), Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGraphicsRegisterResource	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D Version),

CUDA Runtime API	Samples
	Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple OpenGLES, Simple OpenGLES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGraphicsResourceGetMappedPointer	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D Version), Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple OpenGLES, Simple OpenGLES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGraphicsResourceSetMapFlags	SLI D3D10 Texture, Simple D3D10 Texture, Simple D3D11 Texture, Simple D3D9 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target
cudaGraphicsSubResourceGetMappedArray	SLI D3D10 Texture, Simple D3D10 Texture, Simple D3D11 Texture, Simple D3D9 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target
cudaGraphicsUnmapResources	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D Version), Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, Simple OpenGL, Simple OpenGLES, Simple OpenGLES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaGraphicsUnregisterResource	Bicubic B-spline Interpolation, Bilateral Filter, Bindless Texture, Box Filter, CUDA FFT Ocean Simulation, CUDA N-Body Simulation, CUDA N-Body Simulation on Screen, CUDA and OpenGL Interop of Images, Fluids (Direct3D

CUDA Runtime API	Samples
	Version), Fluids (OpenGL Version), Mandelbrot, Marching Cubes Isosurfaces, Particles, Post-Process in OpenGL, Recursive Gaussian Filter, SLI D3D10 Texture, Simple D3D10 Texture, Simple D3D11 Texture, Simple D3D9 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target, Simple Direct3D9 (Vertex Arrays), Simple OpenGL, Simple OpenGL ES, Simple OpenGL ES on Screen, Simple Texture 3D, Smoke Particles, Sobel Filter, VFlockingD3D10, Volume Rendering with 3D Textures, Volumetric Filtering with 3D Textures and Surface Writes
cudaHostAlloc	Bandwidth Test, simpleZeroCopy
cudaHostGetDevicePointer	simpleZeroCopy
cudaHostRegister	simpleZeroCopy
cudaHostUnregister	simpleZeroCopy
cudaIpcCloseMemHandle	simpleIPC
cudaIpcGetEventHandle	simpleIPC
cudaIpcOpenMemHandle	simpleIPC
cudaMallco	Simple Vote Intrinsic, simpleMPI
cudaMalloc	C++ Integration, Clock, Clock libNVRTC, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Pitch Linear Texture, Simple Atomic Intrinsic, Simple Atomic Intrinsic with libNVRTC, Simple Cubemap Texture, Simple Layered Texture, Simple Surface Write, Simple Texture, Template, Template using CUDA Runtime, Using Inline PTX, Using Inline PTX with libNVRTC, Vector Addition, cudaOpenMP, simpleAssert, simpleAssert with libNVRTC, simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism)
cudaMalloc3DArray	Simple Cubemap Texture, Simple Layered Texture
cudaMallocArray	Pitch Linear Texture, Simple Surface Write, Simple Texture
cudaMallocHost	Bandwidth Test, Template using CUDA Runtime, Using Inline PTX, Using Inline PTX with libNVRTC, simpleAssert, simpleAssert with libNVRTC
cudaMallocManaged	Unified Memory Streams

CUDA Runtime API	Samples
cudaMallocPitch	Pitch Linear Texture
cudaMemcpy	Bandwidth Test, C++ Integration, Clock, Clock libNVRTC, Matrix Multiplication (CUBLAS), Matrix Multiplication (CUDA Runtime API Version), Matrix Multiplication with libNVRTC, Peer-to-Peer Bandwidth Latency Test with Multi-GPUs, Simple Atomic Intrinsic, Simple Atomic Intrinsic with libNVRTC, Simple Cubemap Texture, Simple Layered Texture, Simple Peer-to-Peer Transfers with Multi-GPU, Simple Surface Write, Simple Texture, Simple Vote Intrinsic, Template, Template using CUDA Runtime, Using Inline PTX, Using Inline PTX with libNVRTC, Vector Addition, cudaOpenMP, simpleAssert, simpleAssert with libNVRTC, simpleDevLibCUBLAS GPU Device API Library Functions (CUDA Dynamic Parallelism), simpleIPC, simpleMPI
cudaMemcpy2D	Pitch Linear Texture
cudaMemcpy2DToArray	SLI D3D10 Texture, Simple D3D10 Texture, Simple D3D11 Texture, Simple D3D9 Texture, Simple Direct3D10 (Vertex Array), Simple Direct3D10 Render Target
cudaMemcpy3D	Simple Cubemap Texture, Simple D3D9 Texture, Simple Layered Texture
cudaMemcpyAsync	Bandwidth Test, Simple CUDA Callbacks, Simple Multi Copy and Compute, Simple Multi-GPU, asyncAPI, simpleStreams
cudaMemcpyToArray	Pitch Linear Texture, Simple Texture
cudaMemset2D	Pitch Linear Texture
cudaRuntimeGetVersion	Device Query
cudaSetDevice	Bandwidth Test, Device Query
cudaStreamAddCallback	Simple CUDA Callbacks
cudaStreamAttachManagedMem	Unified Memory Streams
cudaStreamCreate	Simple CUDA Callbacks
cudaStreamDestroy	Simple CUDA Callbacks
cudaUnbindTexture	Pitch Linear Texture
cufftDestroy	CUDA FFT Ocean Simulation, FFT-Based 2D Convolution

CUDA Runtime API	Samples
cufftExecC2R	CUDA FFT Ocean Simulation, FFT-Based 2D Convolution
cufftExecR2C	CUDA FFT Ocean Simulation, FFT-Based 2D Convolution
cufftPlan2d	CUDA FFT Ocean Simulation, FFT-Based 2D Convolution
cuidCreateDecoder	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidCtxLockCreate	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidCtxLockDestroy	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidDecodePicture	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidDestroyDecoder	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidMapVideoFrame	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
cuidUnmapVideoFrame	CUDA Video Decoder D3D9 API, CUDA Video Decoder GL API
nppGetGpuComputeCapability	JPEG encode/decode and resize with NPP
nppiDCTFree	JPEG encode/decode and resize with NPP
nppiDCTInitAlloc	JPEG encode/decode and resize with NPP
nppiDCTQuantInv8x8LS_JPEG_16s8u_C1R_NEW	JPEG encode/decode and resize with NPP
nppiDecodeHuffmanScanHost_JPEG_8u16s_P3R	JPEG encode/decode and resize with NPP
nppiEncodeHuffmanGetSize	JPEG encode/decode and resize with NPP
nppiResizeSqrPixel_8u_C1R	JPEG encode/decode and resize with NPP

# Chapter 7.

## FREQUENTLY ASKED QUESTIONS

Answers to frequently asked questions about CUDA can be found at <http://developer.nvidia.com/cuda-faq> and in the [CUDA Toolkit Release Notes](#).

## **Notice**

ALL NVIDIA DESIGN SPECIFICATIONS, REFERENCE BOARDS, FILES, DRAWINGS, DIAGNOSTICS, LISTS, AND OTHER DOCUMENTS (TOGETHER AND SEPARATELY, "MATERIALS") ARE BEING PROVIDED "AS IS." NVIDIA MAKES NO WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE MATERIALS, AND EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES OF NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE.

Information furnished is believed to be accurate and reliable. However, NVIDIA Corporation assumes no responsibility for the consequences of use of such information or for any infringement of patents or other rights of third parties that may result from its use.
