

NVML

NVML API _vR340 | July 2014

Reference Manual

Chapter 1.

NVML API REFERENCE

The NVIDIA Management Library (*NVML*) is a C-based programmatic interface for monitoring and managing various states within NVIDIA Tesla™ GPUs. It is intended to be a platform for building 3rd party applications, and is also the underlying library for the NVIDIA-supported **nvidia-smi** tool. NVML is thread-safe so it is safe to make simultaneous NVML calls from multiple threads.

API Documentation

Supported OS platforms:

- ▶ Windows: Windows Server 2008 R2 64-bit, Windows Server 2012 R2 64bit, Windows 7-8 64-bit
- ▶ Linux: 32-bit and 64-bit

Supported products:

- ▶ Full Support
 - ▶ NVIDIA Tesla Line:
 - ▶ S2050, C2050, C2070, C2075,
 - ▶ M2050, M2070, M2075, M2090,
 - ▶ X2070, X2090,
 - ▶ K8, K10, K20, K20X, K20Xm, K20c, K20m, K20s, K40c, K40m, K40t, K40s, K40st
 - ▶ NVIDIA Quadro Line:
 - ▶ 410, 600, 2000, 4000, 5000, 6000, 7000, M2070-Q
 - ▶ K2000, K2000D, K4000, K5000, K6000
 - ▶ NVIDIA GRID Line:
 - ▶ K1, K2, K340, K520
 - ▶ NVIDIA GeForce Line: None

Limited Support

- ▶ NVIDIA Tesla Line: S1070, C1060, M1060 and all other previous generation Tesla-branded parts
- ▶ NVIDIA Quadro Line: All other current and previous generation Quadro-branded parts
- ▶ NVIDIA GeForce Line: All current and previous generation GeForce-branded parts

The NVML library can be found at:`%ProgramW6432%\NVIDIA Corporation\NVSMI` \on Windows, but will not be added to the path. To dynamically link to NVML, add this path to the PATH environmental variable. To dynamically load NVML, call `LoadLibrary` with this path.

On Linux the NVML library will be found on the standard library path. For 64-bit Linux, both the 32-bit and 64-bit NVML libraries will be installed.

The NVML API is divided into five categories:

- ▶ Support Methods:
 - ▶ Initialization and Cleanup
- ▶ Query Methods:
 - ▶ System Queries
 - ▶ Device Queries
 - ▶ Unit Queries
- ▶ Control Methods:
 - ▶ Unit Commands
 - ▶ Device Commands
- ▶ Event Handling Methods:
 - ▶ Event Handling Methods
- ▶ Error reporting Methods
 - ▶ Error Reporting

List of changes can be found in the [Change Log](#).

Chapter 2. KNOWN ISSUES

This is a list of known NVML issues in the current driver:

- ▶ On Linux when X Server is running `nvmlDeviceGetComputeRunningProcesses` may return a `nvmlProcessInfo_t::usedGpuMemory` value that is larger than the actual value. This will be fixed in a future release.
- ▶ On Linux GPU Reset can't be triggered when there is pending GPU Operation Mode (GOM) change.
- ▶ On Linux GPU Reset may not successfully change pending ECC mode. A full reboot may be required to enable the mode change.
- ▶ `nvmlAccountingStats` supports only one process per GPU at a time (CUDA proxy server counts as one process).
- ▶ `nvmlAccountingStats_t.time` reports time and utilization values starting from `cuInit` till process termination. Next driver versions might change this behavior slightly and account process only from `cuCtxCreate` till `cuCtxDestroy`.
- ▶ On GPUs from Fermi family current P0 clocks (reported by `nvmlDeviceGetClockInfo`) can differ from max clocks by few MHz.

Chapter 3.

CHANGE LOG

This chapter list changes in API and bug fixes that were introduced to the library.

Changes between NVML v331 and v340

The following new functionality is exposed on NVIDIA display drivers version 340 Production or later

- ▶ Added `nvmlDeviceGetSamples` to get recent power, utilization and clock samples for the GPU.
- ▶ Added `nvmlDeviceGetTemperatureThreshold` to get temperature thresholds for the GPU.
- ▶ Added `nvmlDeviceGetBrand` to get the brand name of the GPU.
- ▶ Added `nvmlDeviceGetViolationStatus` to get the duration of time during which the device was throttled (lower than requested clocks) due to power or thermal constraints. Violations due to thermal capping is not supported at this time.
- ▶ Added `nvmlDeviceGetEncoderUtilization` to get the GPU video encoder utilization.
- ▶ Added `nvmlDeviceGetDecoderUtilization` to get the GPU video decoder utilization.
- ▶ Added `nvmlDeviceGetCpuAffinity` to get the closest processor(s) affinity to a particular GPU.
- ▶ Added `nvmlDeviceSetCpuAffinity` to set the affinity of a particular GPU to the closest processor.
- ▶ Added `nvmlDeviceClearCpuAffinity` to clear the affinity of a particular GPU.
- ▶ Added `nvmlDeviceGetBoardId` to get a unique boardId for the running system.
- ▶ Added `nvmlDeviceGetMultiGpuBoard` to get whether the device is on a multiGPU board.
- ▶ Added `nvmlDeviceGetAutoBoostedClocksEnabled` and `nvmlDeviceSetAutoBoostedClocksEnabled` for querying and setting the state of auto boosted clocks on supporting hardware.
- ▶ Added `nvmlDeviceSetDefaultAutoBoostedClocksEnabled` for setting the default state of auto boosted clocks on supporting hardware.

Changes between NVML v5.319 Update and v331

The following new functionality is exposed on NVIDIA display drivers version 331 or later.

- ▶ Added `nvmlDeviceGetMinorNumber` to get the minor number for the device.
- ▶ Added `nvmlDeviceGetBAR1MemoryInfo` to get BAR1 total, available and used memory size.
- ▶ Added `nvmlDeviceGetBridgeChipInfo` to get the information related to bridge chip firmware.
- ▶ Added enforced power limit query API `nvmlDeviceGetEnforcedPowerLimit`
- ▶ Updated `nvmlEventSetWait` to return xid event data in case of xid error event.

Changes between NVML v5.319 RC and v5.319 Update

The following new functionality is exposed on NVIDIA display drivers version 319 Update or later.

- ▶ Added `nvmlDeviceSetAPIRestriction` and `nvmlDeviceGetAPIRestriction`, with initial ability to toggle root-only requirement for `nvmlDeviceSetApplicationsClocks` and `nvmlDeviceResetApplicationsClocks`.

Changes between NVML v4.304 Production and v5.319 RC

The following new functionality is exposed on NVIDIA display drivers version 319 RC or later.

- ▶ Added `_v2` versions of `nvmlDeviceGetHandleByIndex` and `nvmlDeviceGetCount` that also count devices not accessible by current user
 - ▶ `nvmlDeviceGetHandleByIndex_v2` (default) can also return `NVML_ERROR_NO_PERMISSION`
- ▶ Added `nvmlInit_v2` and `nvmlDeviceGetHandleByIndex_v2` that is safer and thus recommended function for initializing the library
 - ▶ `nvmlInit_v2` lazily initializes only requested devices (queried with `nvmlDeviceGetHandle*`)
 - ▶ `nvml.h` defines `nvmlInit_v2` and `nvmlDeviceGetHandleByIndex_v2` as default functions
- ▶ Added `nvmlDeviceGetIndex`
- ▶ Added `NVML_ERROR_GPU_IS_LOST` to report GPUs that have fallen off the bus.
 - ▶ All NVML device APIs can return this error code, as a GPU can fall off the bus at any time.
- ▶ Added new class of APIs for gathering process statistics (`nvmlAccountingStats`)
- ▶ Application Clocks are no longer supported on GPU's from Quadro product line

- ▶ Added APIs to support dynamic page retirement. See `nvmlDeviceGetRetiredPages` and `nvmlDeviceGetRetiredPagesPendingStatus`
- ▶ Renamed `nvmlClocksThrottleReasonUserDefinedClocks` to `nvmlClocksThrottleReasonApplicationsClocksSetting`. Old name is deprecated and can be removed in one of the next major releases.
- ▶ Added `nvmlDeviceGetDisplayActive` and updated documentation to clarify how it differs from `nvmlDeviceGetDisplayMode`

Changes between NVML v4.304 RC and v4.304 Production

The following new functionality is exposed on NVIDIA display drivers version 304 Production or later.

- ▶ Added `nvmlDeviceGetGpuOperationMode` and `nvmlDeviceSetGpuOperationMode`.

Changes between NVML v3.295 and v4.304 RC

The following new functionality is exposed on NVIDIA display drivers version 304 RC or later.

- ▶ Added `nvmlDeviceGetInforomConfigurationChecksum` and `nvmlDeviceValidateInforom`.
- ▶ Added `nvmlDeviceGetDisplayActive` and updated documentation to clarify how it differs from `nvmlDeviceGetDisplayMode`.
- ▶ Added new error return value for initialization failure due to kernel module not receiving interrupts.
- ▶ Added `nvmlDeviceSetApplicationsClocks`, `nvmlDeviceGetApplicationsClock`, `nvmlDeviceResetApplicationsClocks`.
- ▶ Added `nvmlDeviceGetSupportedMemoryClocks` and `nvmlDeviceGetSupportedGraphicsClocks`.
- ▶ Added `nvmlDeviceGetPowerManagementLimitConstraints`, `nvmlDeviceGetPowerManagementDefaultLimit` and `nvmlDeviceSetPowerManagementLimit`.
- ▶ Added `nvmlDeviceGetInforomImageVersion`.
- ▶ Expanded `nvmlDeviceGetUUID` to support all CUDA capable GPUs.
- ▶ Deprecated `nvmlDeviceGetDetailedEccErrors` in favor of `nvmlDeviceGetMemoryErrorCounter`.
- ▶ Added `NVML_MEMORY_LOCATION_TEXTURE_MEMORY` to support reporting of texture memory error counters.
- ▶ Added `nvmlDeviceGetCurrentClocksThrottleReasons` and `nvmlDeviceGetSupportedClocksThrottleReasons`.
- ▶ `NVML_CLOCK_SM` is now also reported on supported Kepler devices.
- ▶ Dropped support for GT200 based Tesla brand GPUs: C1060, M1060, S1070.

Changes between NVML v2.285 and v3.295

The following new functionality is exposed on NVIDIA display drivers version 295 or later.

- ▶ Deprecated `nvmlDeviceGetHandleBySerial` in favor of newly added `nvmlDeviceGetHandleByUUID`.
- ▶ Marked the input parameters of `nvmlDeviceGetHandleBySerial`, `nvmlDeviceGetHandleByUUID` and `nvmlDeviceGetHandleByPciBusId` as const.
- ▶ Added `nvmlDeviceOnSameBoard`.
- ▶ Added `nvmlConstants` defines.
- ▶ Added `nvmlDeviceGetMaxPcieLinkGeneration`, `nvmlDeviceGetMaxPcieLinkWidth`, `nvmlDeviceGetCurrPcieLinkGeneration`, `nvmlDeviceGetCurrPcieLinkWidth`.
- ▶ Format change of `nvmlDeviceGetUUID` output to match the UUID standard. This function will return a different value.
- ▶ `nvmlDeviceGetDetailedEccErrors` will report zero for unsupported ECC error counters when a subset of ECC error counters are supported.

Changes between NVML v1.0 and v2.285

The following new functionality is exposed on NVIDIA display drivers version 285 or later.

- ▶ Added possibility to query separately current and pending driver model with `nvmlDeviceGetDriverModel`.
- ▶ Added API `nvmlDeviceGetVbiosVersion` function to report VBIOS version.
- ▶ Added `pciSubSystemId` to `nvmlPciInfo_t` struct.
- ▶ Added API `nvmlErrorString` function to convert error code to string.
- ▶ Updated docs to indicate we support M2075 and C2075.
- ▶ Added API `nvmlSystemGetHicVersion` function to report HIC firmware version.
- ▶ Added NVML versioning support
 - ▶ Functions that changed API and/or size of structs have appended versioning suffix (e.g., `nvmlDeviceGetPciInfo_v2`). Appropriate C defines have been added that map old function names to the newer version of the function.
- ▶ Added support for concurrent library usage by multiple libraries.
- ▶ Added API `nvmlDeviceGetMaxClockInfo` function for reporting device's clock limits.
- ▶ Added new error code `NVML_ERROR_DRIVER_NOT_LOADED` used by `nvmlInit`.
- ▶ Extended `nvmlPciInfo_t` struct with new field: sub system id.
- ▶ Added NVML support on Windows guest account.
- ▶ Changed format of `pciBusId` string (to `XXXX:XX:XX.X`) of `nvmlPciInfo_t`.
- ▶ Parsing of `busId` in `nvmlDeviceGetHandleByPciBusId` is less restrictive. You can pass `0:2:0.0` or `0000:02:00` and other variations.

- ▶ Added API for events waiting for GPU events (Linux only) see docs of `nvmlEvents`.
- ▶ Added API `nvmlDeviceGetComputeRunningProcesses` and `nvmlSystemGetProcessName` functions for looking up currently running compute applications.
- ▶ Deprecated `nvmlDeviceGetPowerState` in favor of `nvmlDeviceGetPerformanceState`.

Chapter 4.

MODULES

Here is a list of all modules:

- ▶ Device Structs
- ▶ Device Enums
- ▶ Unit Structs
- ▶ Accounting Statistics
- ▶ Initialization and Cleanup
- ▶ Error reporting
- ▶ Constants
- ▶ System Queries
- ▶ Unit Queries
- ▶ Device Queries
- ▶ Unit Commands
- ▶ Device Commands
- ▶ Event Handling Methods
 - ▶ Event Types
- ▶ NvmlClocksThrottleReasons

4.1. Device Structs

struct nvmlBAR1Memory_t

struct nvmlBridgeChipHierarchy_t

struct nvmlBridgeChipInfo_t

struct nvmlEccErrorCounts_t

struct nvmlMemory_t

struct nvmlPciInfo_t

struct nvmlProcessInfo_t

struct nvmlSample_t

struct nvmlUtilization_t

union nvmlValue_t

struct nvmlViolationTime_t

enum nvmlBridgeChipType_t

Enum to represent type of bridge chip

Values

NVML_BRIDGE_CHIP_PLX = 0

NVML_BRIDGE_CHIP_BRO4 = 1

enum nvmlPerfPolicyType_t

Represents type of perf policy for which violation times can be queried

Values

NVML_PERF_POLICY_POWER = 0

NVML_PERF_POLICY_THERMAL = 1

NVML_PERF_POLICY_COUNT

enum nvmlSamplingType_t

Represents Type of Sampling Event

Values

NVML_TOTAL_POWER_SAMPLES = 0

To represent total power drawn by GPU.

NVML_GPU_UTILIZATION_SAMPLES = 1

To represent percent of time during which one or more kernels was executing on the GPU.

NVML_MEMORY_UTILIZATION_SAMPLES = 2

To represent percent of time during which global (device) memory was being read or written.

NVML_ENC_UTILIZATION_SAMPLES = 3

To represent percent of time during which NVENC remains busy.

NVML_DEC_UTILIZATION_SAMPLES = 4

To represent percent of time during which NVDEC remains busy.

NVML_PROCESSOR_CLK_SAMPLES = 5

To represent processor clock samples.

NVML_MEMORY_CLK_SAMPLES = 6

To represent memory clock samples.

NVML_SAMPLINGTYPE_COUNT

enum nvmlValueType_t

Represents the type for sample value returned

Values

NVML_VALUE_TYPE_DOUBLE = 0

NVML_VALUE_TYPE_UNSIGNED_INT = 1

NVML_VALUE_TYPE_UNSIGNED_LONG = 2

NVML_VALUE_TYPE_UNSIGNED_LONG_LONG = 3

NVML_VALUE_TYPE_COUNT

#define NVML_DEVICE_PCI_BUS_ID_BUFFER_SIZE 16

Buffer size guaranteed to be large enough for pci bus id

#define NVML_MAX_PHYSICAL_BRIDGE (128)

Maximum limit on Physical Bridges per Board

#define NVML_VALUE_NOT_AVAILABLE (-1)

Special constant that some fields take when they are not available. Used when only part of the struct is not available.

Each structure explicitly states when to check for this value.

4.2. Device Enums

enum nvmlBrandType_t

* The Brand of the GPU

Values

NVML_BRAND_UNKNOWN = 0

NVML_BRAND_QUADRO = 1

NVML_BRAND_TESLA = 2

NVML_BRAND_NVS = 3

NVML_BRAND_GRID = 4

NVML_BRAND_COUNT

enum nvmlClockType_t

Clock types.

All speeds are in Mhz.

Values

NVML_CLOCK_GRAPHICS = 0

Graphics clock domain.

NVML_CLOCK_SM = 1

SM clock domain.

NVML_CLOCK_MEM = 2

Memory clock domain.

NVML_CLOCK_COUNT

enum nvmlComputeMode_t

Compute mode.

`NVML_COMPUTEMODE_EXCLUSIVE_PROCESS` was added in CUDA 4.0. Earlier CUDA versions supported a single exclusive mode, which is equivalent to `NVML_COMPUTEMODE_EXCLUSIVE_THREAD` in CUDA 4.0 and beyond.

Values

`NVML_COMPUTEMODE_DEFAULT = 0`

Default compute mode -- multiple contexts per device.

`NVML_COMPUTEMODE_EXCLUSIVE_THREAD = 1`

Compute-exclusive-thread mode -- only one context per device, usable from one thread at a time.

`NVML_COMPUTEMODE_PROHIBITED = 2`

Compute-prohibited mode -- no contexts per device.

`NVML_COMPUTEMODE_EXCLUSIVE_PROCESS = 3`

Compute-exclusive-process mode -- only one context per device, usable from multiple threads at a time.

`NVML_COMPUTEMODE_COUNT`

enum nvmlDriverModel_t

Driver models.

Windows only.

Values

`NVML_DRIVER_WDDM = 0`

WDDM driver model -- GPU treated as a display device.

`NVML_DRIVER_WDM = 1`

WDM (TCC) model (recommended) -- GPU treated as a generic device.

enum nvmlEccCounterType_t

ECC counter types.

Note: Volatile counts are reset each time the driver loads. On Windows this is once per boot. On Linux this can be more frequent. On Linux the driver unloads when no active clients exist. If persistence mode is enabled or there is always a driver client active (e.g. X11), then Linux also sees per-boot behavior. If not, volatile counts are reset each time a compute app is run.

Values

`NVML_VOLATILE_ECC = 0`

Volatile counts are reset each time the driver loads.

`NVML_AGGREGATE_ECC = 1`

Aggregate counts persist across reboots (i.e. for the lifetime of the device).

NVML_ECC_COUNTER_TYPE_COUNT

Count of memory counter types.

enum nvmlEnableState_t

Generic enable/disable enum.

Values

NVML_FEATURE_DISABLED = 0

Feature disabled.

NVML_FEATURE_ENABLED = 1

Feature enabled.

enum nvmlGpuOperationMode_t

GPU Operation Mode

GOM allows to reduce power usage and optimize GPU throughput by disabling GPU features.

Each GOM is designed to meet specific user needs.

Values

NVML_GOM_ALL_ON = 0

Everything is enabled and running at full speed.

NVML_GOM_COMPUTE = 1

Designed for running only compute tasks. Graphics operations are not allowed

NVML_GOM_LOW_DP = 2

Designed for running graphics applications that don't require high bandwidth double precision

enum nvmlInforomObject_t

Available infoROM objects.

Values

NVML_INFOROM_OEM = 0

An object defined by OEM.

NVML_INFOROM_ECC = 1

The ECC object determining the level of ECC support.

NVML_INFOROM_POWER = 2

The power management object.

NVML_INFOROM_COUNT

This counts the number of infoROM objects the driver knows about.

enum nvmlMemoryErrorType_t

Memory error types

Values

NVML_MEMORY_ERROR_TYPE_CORRECTED = 0

A memory error that was corrected. For ECC errors, these are single bit errors. For Texture memory, these are errors fixed by resend.

NVML_MEMORY_ERROR_TYPE_UNCORRECTED = 1

A memory error that was not corrected. For ECC errors, these are double bit errors. For Texture memory, these are errors where the resend fails.

NVML_MEMORY_ERROR_TYPE_COUNT

Count of memory error types.

enum nvmlMemoryLocation_t

Memory locations

See [nvmlDeviceGetMemoryErrorCounter](#)

Values

NVML_MEMORY_LOCATION_L1_CACHE = 0

GPU L1 Cache.

NVML_MEMORY_LOCATION_L2_CACHE = 1

GPU L2 Cache.

NVML_MEMORY_LOCATION_DEVICE_MEMORY = 2

GPU Device Memory.

NVML_MEMORY_LOCATION_REGISTER_FILE = 3

GPU Register File.

NVML_MEMORY_LOCATION_TEXTURE_MEMORY = 4

GPU Texture Memory.

NVML_MEMORY_LOCATION_COUNT

This counts the number of memory locations the driver knows about.

enum nvmlPageRetirementCause_t

Causes for page retirement

Values

NVML_PAGE_RETIREMENT_CAUSE_MULTIPLE_SINGLE_BIT_ECC_ERRORS = 0

Page was retired due to multiple single bit ECC error.

NVML_PAGE_RETIREMENT_CAUSE_DOUBLE_BIT_ECC_ERROR = 1

Page was retired due to double bit ECC error.

NVML_PAGE_RETIREMENT_CAUSE_COUNT**enum nvmlPstates_t**

Allowed PStates.

Values

NVML_PSTATE_0 = 0

Performance state 0 -- Maximum Performance.

NVML_PSTATE_1 = 1

Performance state 1.

NVML_PSTATE_2 = 2

Performance state 2.

NVML_PSTATE_3 = 3

Performance state 3.

NVML_PSTATE_4 = 4

Performance state 4.

NVML_PSTATE_5 = 5

Performance state 5.

NVML_PSTATE_6 = 6

Performance state 6.

NVML_PSTATE_7 = 7

Performance state 7.

NVML_PSTATE_8 = 8

Performance state 8.

NVML_PSTATE_9 = 9

Performance state 9.

NVML_PSTATE_10 = 10

Performance state 10.

NVML_PSTATE_11 = 11

Performance state 11.

NVML_PSTATE_12 = 12

Performance state 12.

NVML_PSTATE_13 = 13

Performance state 13.

NVML_PSTATE_14 = 14

Performance state 14.

NVML_PSTATE_15 = 15

Performance state 15 -- Minimum Performance.

NVML_PSTATE_UNKNOWN = 32

Unknown performance state.

enum nvmlRestrictedAPI_t

API types that allow changes to default permission restrictions

Values

NVML_RESTRICTED_API_SET_APPLICATION_CLOCKS = 0

APIs that change application clocks, see `nvmlDeviceSetApplicationsClocks` and see `nvmlDeviceResetApplicationsClocks`

NVML_RESTRICTED_API_SET_AUTO_BOOSTED_CLOCKS = 1

APIs that enable/disable auto boosted clocks see `nvmlDeviceSetAutoBoostedClocksEnabled`

NVML_RESTRICTED_API_COUNT

enum nvmlReturn_t

Return values for NVML API calls.

Values

NVML_SUCCESS = 0

The operation was successful.

NVML_ERROR_UNINITIALIZED = 1

NVML was not first initialized with `nvmlInit()`.

NVML_ERROR_INVALID_ARGUMENT = 2

A supplied argument is invalid.

NVML_ERROR_NOT_SUPPORTED = 3

The requested operation is not available on target device.

NVML_ERROR_NO_PERMISSION = 4

The current user does not have permission for operation.

NVML_ERROR_ALREADY_INITIALIZED = 5

Deprecated: Multiple initializations are now allowed through ref counting.

NVML_ERROR_NOT_FOUND = 6

A query to find an object was unsuccessful.

NVML_ERROR_INSUFFICIENT_SIZE = 7

An input argument is not large enough.

NVML_ERROR_INSUFFICIENT_POWER = 8

A device's external power cables are not properly attached.

NVML_ERROR_DRIVER_NOT_LOADED = 9

NVIDIA driver is not loaded.

NVML_ERROR_TIMEOUT = 10

User provided timeout passed.

NVML_ERROR_IRQ_ISSUE = 11

NVIDIA Kernel detected an interrupt issue with a GPU.

NVML_ERROR_LIBRARY_NOT_FOUND = 12

NVML Shared Library couldn't be found or loaded.

NVML_ERROR_FUNCTION_NOT_FOUND = 13

Local version of NVML doesn't implement this function.

NVML_ERROR_CORRUPTED_INFOTRANSMISSION = 14

infoROM is corrupted

NVML_ERROR_GPU_IS_LOST = 15

The GPU has fallen off the bus or has otherwise become inaccessible.

NVML_ERROR_RESET_REQUIRED = 16

The GPU requires a reset before it can be used again.

NVML_ERROR_UNKNOWN = 999

An internal driver error occurred.

enum nvmlTemperatureSensors_t

Temperature sensors.

Values

NVML_TEMPERATURE_GPU = 0

Temperature sensor for the GPU die.

NVML_TEMPERATURE_COUNT

enum nvmlTemperatureThresholds_t

Temperature thresholds.

Values

NVML_TEMPERATURE_THRESHOLD_SHUTDOWN = 0

NVML_TEMPERATURE_THRESHOLD_SLOWDOWN = 1

NVML_TEMPERATURE_THRESHOLD_COUNT

#define NVML_DOUBLE_BIT_ECC

NVML_MEMORY_ERROR_TYPE_UNCORRECTED

Double bit ECC errors

Deprecated Mapped to NVML_MEMORY_ERROR_TYPE_UNCORRECTED

#define NVML_SINGLE_BIT_ECC

NVML_MEMORY_ERROR_TYPE_CORRECTED

Single bit ECC errors

Deprecated Mapped to NVML_MEMORY_ERROR_TYPE_CORRECTED

`#define nvmlEccBitType_t nvmlMemoryErrorType_t`

ECC bit types.

Deprecated See `nvmlMemoryErrorType_t` for a more flexible type

`#define nvmlFlagDefault 0x00`

Generic flag used to specify the default behavior of some functions. See description of particular functions for details.

`#define nvmlFlagForce 0x01`

Generic flag used to force some behavior. See description of particular functions for details.

4.3. Unit Structs

`struct nvmlHwbcEntry_t`

`struct nvmlLedState_t`

`struct nvmlPSUInfo_t`

`struct nvmlUnitFanInfo_t`

`struct nvmlUnitFanSpeeds_t`

`struct nvmlUnitInfo_t`

`enum nvmlFanState_t`

Fan state enum.

Values

`NVML_FAN_NORMAL = 0`

Fan is working properly.

`NVML_FAN_FAILED = 1`

Fan has failed.

enum nvmlLedColor_t

Led color enum.

Values

NVML_LED_COLOR_GREEN = 0

GREEN, indicates good health.

NVML_LED_COLOR_AMBER = 1

AMBER, indicates problem.

4.4. Accounting Statistics

Set of APIs designed to provide per process information about usage of GPU.

- ▶ All accounting statistics and accounting mode live in nvidia driver and reset to default (Disabled) when driver unloads. It is advised to run with persistence mode enabled.
- ▶ Enabling accounting mode has no negative impact on the GPU performance.

struct nvmlAccountingStats_t

nvmlReturn_t nvmlDeviceClearAccountingPids (nvmlDevice_t device)

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if accounting information has been cleared
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Clears accounting information about all processes that have already terminated.

For Tesla and Quadro products from the Kepler family. Requires root/admin permissions.

See [nvmlDeviceGetAccountingMode](#) See [nvmlDeviceGetAccountingStats](#) See [nvmlDeviceSetAccountingMode](#)

nvmlReturn_t nvmlDeviceGetAccountingBufferSize (nvmlDevice_t device, unsigned int *bufferSize)

Parameters**device**

The identifier of the target device

bufferSize

Reference in which to provide the size (in number of elements) of the circular buffer for accounting stats.

Returns

- ▶ NVML_SUCCESS if buffer size was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or bufferSize is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature or accounting mode is disabled
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the number of processes that the circular buffer with accounting pids can hold.

For Tesla and Quadro products from the Kepler family.

This is the maximum number of processes that accounting information will be stored for before information about oldest processes will get overwritten by information about new processes.

See also:

[nvmlDeviceGetAccountingStats](#)

[nvmlDeviceGetAccountingPids](#)

`nvmlReturn_t nvmlDeviceGetAccountingMode` (`nvmlDevice_t device, nvmlEnableState_t *mode`)

Parameters

device

The identifier of the target device

mode

Reference in which to return the current accounting mode

Returns

- ▶ `NVML_SUCCESS` if the mode has been successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode are NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device doesn't support this feature
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Queries the state of per process accounting mode.

For Tesla and Quadro products from the Kepler family.

See [nvmlDeviceGetAccountingStats](#) for more details. See [nvmlDeviceSetAccountingMode](#)

`nvmlReturn_t nvmlDeviceGetAccountingPids` (`nvmlDevice_t device, unsigned int *count, unsigned int *pids`)

Parameters

device

The identifier of the target device

count

Reference in which to provide the pids array size, and to return the number of elements ready to be queried

pids

Reference in which to return list of process ids

Returns

- ▶ `NVML_SUCCESS` if pids were successfully retrieved

- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or count is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device doesn't support this feature or accounting mode is disabled
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if count is too small (count is set to expected value)
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Queries list of processes that can be queried for accounting stats.

For Tesla and Quadro products from the Kepler family.

To just query the number of processes ready to be queried, call this function with `*count = 0` and `pids=NULL`. The return code will be `NVML_ERROR_INSUFFICIENT_SIZE`, or `NVML_SUCCESS` if list is empty.

For more details see [nvmlDeviceGetAccountingStats](#).

In case of PID collision some processes might not be accessible before the circular buffer is full.

See also:

[nvmlDeviceGetAccountingBufferSize](#)

`nvmlReturn_t nvmlDeviceGetAccountingStats` (`nvmlDevice_t device`, `unsigned int pid`, `nvmlAccountingStats_t *stats`)

Parameters

device

The identifier of the target device

pid

Process Id of the target process to query stats for

stats

Reference in which to return the process's accounting stats

Returns

- ▶ `NVML_SUCCESS` if stats have been successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or stats are NULL
- ▶ `NVML_ERROR_NOT_FOUND` if process stats were not found
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device doesn't support this feature or accounting mode is disabled
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Queries process's accounting stats.

For Tesla and Quadro products from the Kepler family.

Accounting stats capture GPU utilization and other statistics across the lifetime of a process. Accounting stats can be queried during life time of the process and after its termination. Accounting stats are kept in a circular buffer, newly created processes overwrite information about old processes.

See `nvmlAccountingStats_t` for description of each returned metric. List of processes that can be queried can be retrieved from `nvmlDeviceGetAccountingPids`.

- ▶ Accounting Mode needs to be on. See `nvmlDeviceGetAccountingMode`.
- ▶ Only compute and graphics applications stats can be queried. Monitoring applications stats can't be queried since they don't contribute to GPU utilization.
- ▶ In case of pid collision stats of only the latest process (that terminated last) will be reported

See also:

`nvmlDeviceGetAccountingBufferSize`

`nvmlReturn_t nvmlDeviceSetAccountingMode` (`nvmlDevice_t device`, `nvmlEnableState_t mode`)

Parameters

device

The identifier of the target device

mode

The target accounting mode

Returns

- ▶ `NVML_SUCCESS` if the new mode has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device or mode are invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device doesn't support this feature
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Enables or disables per process accounting.

For Tesla and Quadro products from the Kepler family. Requires root/admin permissions.

- ▶ This setting is not persistent and will default to disabled after driver unloads. Enable persistence mode to be sure the setting doesn't switch off to disabled.
- ▶ Enabling accounting mode has no negative impact on the GPU performance.
- ▶ Disabling accounting clears all accounting pids information.

See [nvmlDeviceGetAccountingMode](#) See [nvmlDeviceGetAccountingStats](#) See [nvmlDeviceClearAccountingPids](#)

4.5. Initialization and Cleanup

This chapter describes the methods that handle NVML initialization and cleanup. It is the user's responsibility to call [nvmlInit\(\)](#) before calling any other methods, and [nvmlShutdown\(\)](#) once NVML is no longer being used.

`nvmlReturn_t nvmlInit (void)`

Returns

- ▶ `NVML_SUCCESS` if NVML has been properly initialized
- ▶ `NVML_ERROR_DRIVER_NOT_LOADED` if NVIDIA driver is not running
- ▶ `NVML_ERROR_NO_PERMISSION` if NVML does not have permission to talk to the driver
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Initialize NVML, but don't initialize any GPUs yet.

In NVML 5.319 new `nvmlInit_v2` has replaced `nvmlInit_v1` (default in NVML 4.304 and older) that did initialize all GPU devices in the system.

This allows NVML to communicate with a GPU when other GPUs in the system are unstable or in a bad state. When using this API, GPUs are discovered and initialized in `nvmlDeviceGetHandleBy*` functions instead.

To contrast `nvmlInit_v2` with `nvmlInit_v1`, NVML 4.304 `nvmlInit_v1` will fail when any detected GPU is in a bad or unstable state.

For all products.

This method, should be called once before invoking any other methods in the library. A reference count of the number of initializations is maintained. Shutdown only occurs when the reference count reaches zero.

`nvmlReturn_t nvmlShutdown (void)`

Returns

- ▶ `NVML_SUCCESS` if NVML has been properly shut down
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Shut down NVML by releasing all GPU resources previously allocated with `nvmlInit()`.

For all products.

This method should be called after NVML work is done, once for each call to `nvmlInit()`. A reference count of the number of initializations is maintained. Shutdown only occurs when the reference count reaches zero. For backwards compatibility, no error is reported if `nvmlShutdown()` is called more times than `nvmlInit()`.

4.6. Error reporting

This chapter describes helper functions for error reporting routines.

```
const DECLDIR char *nvmlErrorString (nvmlReturn_t
result)
```

Parameters

result

NVML error code to convert

Returns

String representation of the error.

Description

Helper method for converting NVML error codes into readable strings.

For all products

4.7. Constants

```
#define NVML_DEVICE_INFOROM_VERSION_BUFFER_SIZE
16
```

Buffer size guaranteed to be large enough for `nvmlDeviceGetInforomVersion` and `nvmlDeviceGetInforomImageVersion`

```
#define NVML_DEVICE_NAME_BUFFER_SIZE 64
```

Buffer size guaranteed to be large enough for `nvmlDeviceGetName`

```
#define NVML_DEVICE_SERIAL_BUFFER_SIZE 30
```

Buffer size guaranteed to be large enough for `nvmlDeviceGetSerial`

```
#define NVML_DEVICE_UUID_BUFFER_SIZE 80
```

Buffer size guaranteed to be large enough for `nvmlDeviceGetUUID`

```
#define NVML_DEVICE_VBIOS_VERSION_BUFFER_SIZE 32
```

Buffer size guaranteed to be large enough for `nvmlDeviceGetVbiosVersion`

```
#define NVML_SYSTEM_DRIVER_VERSION_BUFFER_SIZE
80
```

Buffer size guaranteed to be large enough for `nvmlSystemGetDriverVersion`

```
#define NVML_SYSTEM_NVML_VERSION_BUFFER_SIZE 80
```

Buffer size guaranteed to be large enough for `nvmlSystemGetNVMLVersion`

4.8. System Queries

This chapter describes the queries that NVML can perform against the local system. These queries are not device-specific.

```
nvmlReturn_t nvmlSystemGetDriverVersion (char
*version, unsigned int length)
```

Parameters

version

Reference in which to return the version identifier

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small

Description

Retrieves the version of the system's graphics driver.

For all products.

The version identifier is an alphanumeric string. It will not exceed 80 characters in length (including the NULL terminator). See `nvmlConstants::NVML_SYSTEM_DRIVER_VERSION_BUFFER_SIZE`.

`nvmlReturn_t nvmlSystemGetNVMLVersion (char *version, unsigned int length)`

Parameters

version

Reference in which to return the version identifier

length

The maximum allowed length of the string returned in version

Returns

- ▶ `NVML_SUCCESS` if version has been set
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if version is NULL
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small

Description

Retrieves the version of the NVML library.

For all products.

The version identifier is an alphanumeric string. It will not exceed 80 characters in length (including the NULL terminator). See [nvmlConstants::NVML_SYSTEM_NVML_VERSION_BUFFER_SIZE](#).

`nvmlReturn_t nvmlSystemGetProcessName (unsigned int pid, char *name, unsigned int length)`

Parameters

pid

The identifier of the process

name

Reference in which to return the process name

length

The maximum allowed length of the string returned in name

Returns

- ▶ `NVML_SUCCESS` if name has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if name is NULL
- ▶ `NVML_ERROR_NOT_FOUND` if process doesn't exist

- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Gets name of the process with provided process id

For all products.

Returned process name is cropped to provided length. name string is encoded in ANSI.

4.9. Unit Queries

This chapter describes that queries that NVML can perform against each unit. For S-class systems only. In each case the device is identified with an `nvmlUnit_t` handle. This handle is obtained by calling `nvmlUnitGetHandleByIndex()`.

`nvmlReturn_t nvmlSystemGetHicVersion (unsigned int *hwbcCount, nvmlHwbcEntry_t *hwbcEntries)`

Parameters

`hwbcCount`

Size of `hwbcEntries` array

`hwbcEntries`

Array holding information about hwbc

Returns

- ▶ `NVML_SUCCESS` if `hwbcCount` and `hwbcEntries` have been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if either `hwbcCount` or `hwbcEntries` is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if `hwbcCount` indicates that the `hwbcEntries` array is too small

Description

Retrieves the IDs and firmware versions for any Host Interface Cards (HICs) in the system.

For S-class products.

The `hwbcCount` argument is expected to be set to the size of the input `hwbcEntries` array. The HIC must be connected to an S-class system for it to be reported by this function.

`nvmlReturn_t nvmlUnitGetCount (unsigned int *unitCount)`

Parameters

`unitCount`

Reference in which to return the number of units

Returns

- ▶ `NVML_SUCCESS` if `unitCount` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `unitCount` is `NULL`
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the number of units in the system.

For S-class products.

`nvmlReturn_t nvmlUnitGetDevices (nvmlUnit_t unit, unsigned int *deviceCount, nvmlDevice_t *devices)`

Parameters

`unit`

The identifier of the target unit

`deviceCount`

Reference in which to provide the devices array size, and to return the number of attached GPU devices

`devices`

Reference in which to return the references to the attached GPU devices

Returns

- ▶ `NVML_SUCCESS` if `deviceCount` and `devices` have been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if `deviceCount` indicates that the devices array is too small
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `unit` is invalid, either of `deviceCount` or `devices` is `NULL`
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the set of GPU devices that are attached to the specified unit.

For S-class products.

The `deviceCount` argument is expected to be set to the size of the input devices array.

`nvmlReturn_t nvmlUnitGetFanSpeedInfo (nvmlUnit_t unit, nvmlUnitFanSpeeds_t *fanSpeeds)`

Parameters

`unit`

The identifier of the target unit

`fanSpeeds`

Reference in which to return the fan speed information

Returns

- ▶ `NVML_SUCCESS` if `fanSpeeds` has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `unit` is invalid or `fanSpeeds` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if this is not an S-class product
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the fan speed readings for the unit.

For S-class products.

See [nvmlUnitFanSpeeds_t](#) for details on available fan speed info.

`nvmlReturn_t nvmlUnitGetHandleByIndex (unsigned int index, nvmlUnit_t *unit)`

Parameters

index

The index of the target unit, ≥ 0 and $< \text{unitCount}$

unit

Reference in which to return the unit handle

Returns

- ▶ NVML_SUCCESS if unit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if index is invalid or unit is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular unit, based on its index.

For S-class products.

Valid indices are derived from the `unitCount` returned by `nvmlUnitGetCount()`. For example, if `unitCount` is 2 the valid indices are 0 and 1, corresponding to UNIT 0 and UNIT 1.

The order in which NVML enumerates units has no guarantees of consistency between reboots.

`nvmlReturn_t nvmlUnitGetLedState (nvmlUnit_t unit, nvmlLedState_t *state)`

Parameters

unit

The identifier of the target unit

state

Reference in which to return the current LED state

Returns

- ▶ NVML_SUCCESS if state has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or state is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the LED state associated with this unit.

For S-class products.

See [nvmlLedState_t](#) for details on allowed states.

See also:

[nvmlUnitSetLedState\(\)](#)

`nvmlReturn_t nvmlUnitGetPsuInfo (nvmlUnit_t unit, nvmlPSUInfo_t *psu)`

Parameters

unit

The identifier of the target unit

psu

Reference in which to return the PSU information

Returns

- ▶ NVML_SUCCESS if psu has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or psu is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the PSU stats for the unit.

For S-class products.

See [nvmlPSUInfo_t](#) for details on available PSU info.

`nvmlReturn_t nvmlUnitGetTemperature (nvmlUnit_t unit, unsigned int type, unsigned int *temp)`

Parameters

unit

The identifier of the target unit

type

The type of reading to take

temp

Reference in which to return the intake temperature

Returns

- ▶ `NVML_SUCCESS` if temp has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if unit or type is invalid or temp is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if this is not an S-class product
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the temperature readings for the unit, in degrees C.

For S-class products.

Depending on the product, readings may be available for intake (type=0), exhaust (type=1) and board (type=2).

`nvmlReturn_t nvmlUnitGetUnitInfo (nvmlUnit_t unit, nvmlUnitInfo_t *info)`

Parameters

unit

The identifier of the target unit

info

Reference in which to return the unit information

Returns

- ▶ `NVML_SUCCESS` if info has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if unit is invalid or info is NULL

Description

Retrieves the static information associated with a unit.

For S-class products.

See [nvmlUnitInfo_t](#) for details on available unit info.

4.10. Device Queries

This chapter describes that queries that NVML can perform against each device. In each case the device is identified with an `nvmlDevice_t` handle. This handle is obtained by calling one of [nvmlDeviceGetHandleByIndex\(\)](#), [nvmlDeviceGetHandleBySerial\(\)](#), [nvmlDeviceGetHandleByPciBusId\(\)](#), or [nvmlDeviceGetHandleByUUID\(\)](#).

`nvmlReturn_t nvmlDeviceClearCpuAffinity` (`nvmlDevice_t device`)

Parameters**device**

The identifier of the target device

Returns

- ▶ `NVML_SUCCESS` if the calling process has been successfully unbound
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Clear all affinity bindings

For Kepler or newer devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetAPIRestriction` (`nvmlDevice_t device`, `nvmlRestrictedAPI_t apiType`, `nvmlEnableState_t *isRestricted`)

Parameters

device

The identifier of the target device

apiType

Target API type for this operation

isRestricted

Reference in which to return the current restriction `NVML_FEATURE_ENABLED` indicates that the API is root-only `NVML_FEATURE_DISABLED` indicates that the API is accessible to all users

Returns

- ▶ `NVML_SUCCESS` if `isRestricted` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid, `apiType` incorrect or `isRestricted` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if this query is not supported by the device or the device does not support the feature that is being queried (E.G. Enabling/disabling auto boosted clocks is not supported by the device)
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the root/admin permissions on the target API. See `nvmlRestrictedAPI_t` for the list of supported APIs. If an API is restricted only root users can call that API. See `nvmlDeviceSetAPIRestriction` to change current permissions.

For Tesla and Quadro &tm products from the Kepler+ family.

See also:

[nvmlRestrictedAPI_t](#)

nvmlReturn_t nvmlDeviceGetApplicationsClock
 (nvmlDevice_t device, nvmlClockType_t clockType,
 unsigned int *clockMHz)

Parameters

device

The identifier of the target device

clockType

Identify which clock domain to query

clockMHz

Reference in which to return the clock in MHz

Returns

- ▶ NVML_SUCCESS if clockMHz has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clockMHz is NULL or clockType is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current setting of a clock that applications will use unless an overspec situation occurs. Can be changed using [nvmlDeviceSetApplicationsClocks](#).

For Tesla products from the Kepler family.

nvmlReturn_t nvmlDeviceGetAutoBoostedClocksEnabled
 (nvmlDevice_t device, nvmlEnableState_t *isEnabled,
 nvmlEnableState_t *defaultIsEnabled)

Parameters

device

The identifier of the target device

isEnabled

Where to store the current state of auto boosted clocks of the target device

defaultIsEnabled

Where to store the default auto boosted clocks behavior of the target device that the device will revert to when no applications are using the GPU

Returns

- ▶ NVML_SUCCESS If isEnabled has been set with the auto boosted clocks state of device
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or isEnabled is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support auto boosted clocks
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the current state of auto boosted clocks on a device and store it in isEnabled

For Tesla products of Kepler or newer

Auto boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow.

**nvmlReturn_t nvmlDeviceGetBAR1MemoryInfo
(nvmlDevice_t device, nvmlBAR1Memory_t
*bar1Memory)**

Parameters**device**

The identifier of the target device

bar1Memory

Reference in which BAR1 memory information is returned.

Returns

- ▶ NVML_SUCCESS if BAR1 memory is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, bar1Memory is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Gets Total, Available and Used size of BAR1 memory.

BAR1 is used to map the FB (device memory) so that it can be directly accessed by the CPU or by 3rd party devices (peer-to-peer on the PCIE bus).

For Tesla and Quadro &tm products from the Kepler+ family.

`nvmlReturn_t nvmlDeviceGetBoardId (nvmlDevice_t device, unsigned int *boardId)`

Parameters

device

The identifier of the target device

boardId

Reference in which to return the device's board ID

Returns

- ▶ NVML_SUCCESS if boardId has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or boardId is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the device boardId from 0-N. Devices with the same boardId indicate GPUs connected to the same PLX. Use in conjunction with `nvmlDeviceGetMultiGpuBoard()` to decide if they are on the same board as well. The boardId returned is a unique ID for the current configuration. Uniqueness and ordering across reboots and system configurations is not guaranteed (i.e. if a Tesla K40c returns 0x100 and the two GPUs on a Tesla K10 in the same system returns 0x200 it is not guaranteed they will always return those values but they will always be different from each other).

For Tesla and Quadro products from the Fermi and Kepler families.

`nvmlReturn_t nvmlDeviceGetBrand (nvmlDevice_t device, nvmlBrandType_t *type)`

Parameters

device

The identifier of the target device

type

Reference in which to return the product brand type

Returns

- ▶ `NVML_SUCCESS` if name has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or type is `NULL`
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the brand of this device.

For Tesla, NVS, GRID, and Quadro products.

The type is a member of `nvmlBrandType_t` defined above.

`nvmlReturn_t nvmlDeviceGetBridgeChipInfo (nvmlDevice_t device, nvmlBridgeChipHierarchy_t *bridgeHierarchy)`

Parameters

device

The identifier of the target device

bridgeHierarchy

Reference to the returned bridge chip Hierarchy

Returns

- ▶ `NVML_SUCCESS` if bridge chip exists
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or bridgeInfo is `NULL`

- ▶ NVML_ERROR_NOT_SUPPORTED if bridge chip not supported on the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Bridge Chip Information for all the bridge chips on the board.

For all fully supported multi-GPU products

`nvmlReturn_t nvmlDeviceGetClockInfo (nvmlDevice_t device, nvmlClockType_t type, unsigned int *clock)`

Parameters

device

The identifier of the target device

type

Identify which clock domain to query

clock

Reference in which to return the clock speed in MHz

Returns

- ▶ NVML_SUCCESS if clock has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clock is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device cannot report the specified clock
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current clock speeds for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

See [nvmlClockType_t](#) for details on available clock information.

`nvmlReturn_t nvmlDeviceGetComputeMode` (`nvmlDevice_t device`, `nvmlComputeMode_t *mode`)

Parameters

device

The identifier of the target device

mode

Reference in which to return the current compute mode

Returns

- ▶ `NVML_SUCCESS` if mode has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current compute mode for the device.

For all CUDA-capable products.

See `nvmlComputeMode_t` for details on allowed compute modes.

See also:

`nvmlDeviceSetComputeMode()`

`nvmlReturn_t nvmlDeviceGetComputeRunningProcesses` (`nvmlDevice_t device`, `unsigned int *infoCount`, `nvmlProcessInfo_t *infos`)

Parameters

device

The identifier of the target device

infoCount

Reference in which to provide the infos array size, and to return the number of returned elements

infos

Reference in which to return the process information

Returns

- ▶ NVML_SUCCESS if infoCount and infos have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if infoCount indicates that the infos array is too small infoCount will contain minimal amount of space necessary for the call to complete
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, either of infoCount or infos is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get information about processes with a compute context on a device

For Tesla and Quadro products from the Fermi and Kepler families.

This function returns information only about compute running processes (e.g. CUDA application which have active context). Any graphics applications (e.g. using OpenGL, DirectX) won't be listed by this function.

To query the current number of running compute processes, call this function with *infoCount = 0. The return code will be NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if none are running. For this call infos is allowed to be NULL.

Keep in mind that information returned by this call is dynamic and the number of elements might change in time. Allocate more space for infos table in case new compute processes are spawned.

See also:

[nvmlSystemGetProcessName](#)

`nvmlReturn_t nvmlDeviceGetCount (unsigned int *deviceCount)`

Parameters**deviceCount**

Reference in which to return the number of accessible devices

Returns

- ▶ NVML_SUCCESS if deviceCount has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if deviceCount is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the number of compute devices in the system. A compute device is a single GPU.

For all products.

Note: New `nvmlDeviceGetCount_v2` (default in NVML 5.319) returns count of all devices in the system even if `nvmlDeviceGetHandleByIndex_v2` returns `NVML_ERROR_NO_PERMISSION` for such device. Update your code to handle this error, or use NVML 4.304 or older `nvml` header file. For backward binary compatibility reasons `_v1` version of the API is still present in the shared library. Old `_v1` version of `nvmlDeviceGetCount` doesn't count devices that NVML has no permission to talk to.

nvmlReturn_t nvmlDeviceGetCpuAffinity (nvmlDevice_t device, unsigned int cpuSetSize, unsigned int *cpuSet)

Parameters**device**

The identifier of the target device

cpuSetSize

The size of the `cpuSet` array that is safe to access

cpuSet

Array reference in which to return a bitmask of CPUs, 32 CPUs per unsigned int

Returns

- ▶ NVML_SUCCESS if `cpuAffinity` has been filled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, `cpuSetSize == 0`, or `cpuSet` is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves an array of unsigned ints (sized to `cpuSetSize`) of bitmasks with the ideal CPU affinity for the device. For example, if processors 0, 1, 32, and 33 are ideal for the device and `cpuSetSize == 2`, `result[0] = 0x3`, `result[1] = 0x3`

For Kepler or newer devices. Supported on Linux only.

`nvmlReturn_t` `nvmlDeviceGetCurrentClocksThrottleReasons` (`nvmlDevice_t` device, unsigned long long *`clocksThrottleReasons`)

Parameters**device**

The identifier of the target device

clocksThrottleReasons

Reference in which to return bitmask of active clocks throttle reasons

Returns

- ▶ `NVML_SUCCESS` if `clocksThrottleReasons` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or `clocksThrottleReasons` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves current clocks throttling reasons.

For Tesla products from Kepler family.

More than one bit can be enabled at the same time. Multiple reasons can be affecting clocks at once.

See also:

[NvmlClocksThrottleReasons](#)

`nvmlDeviceGetSupportedClocksThrottleReasons`

`nvmlReturn_t nvmlDeviceGetCurrPcieLinkGeneration` (`nvmlDevice_t device`, `unsigned int *currLinkGen`)

Parameters

device

The identifier of the target device

currLinkGen

Reference in which to return the current PCIe link generation

Returns

- ▶ `NVML_SUCCESS` if `currLinkGen` has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `currLinkGen` is null
- ▶ `NVML_ERROR_NOT_SUPPORTED` if PCIe link information is not available
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current PCIe link generation

For Tesla and Quadro products from the Fermi and Kepler families.

`nvmlReturn_t nvmlDeviceGetCurrPcieLinkWidth` (`nvmlDevice_t device`, `unsigned int *currLinkWidth`)

Parameters

device

The identifier of the target device

currLinkWidth

Reference in which to return the current PCIe link generation

Returns

- ▶ `NVML_SUCCESS` if `currLinkWidth` has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `currLinkWidth` is null

- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current PCIe link width

For Tesla and Quadro products from the Fermi and Kepler families.

`nvmlReturn_t nvmlDeviceGetDecoderUtilization` (`nvmlDevice_t device`, `unsigned int *utilization`, `unsigned int *samplingPeriodUs`)

Parameters

`device`

The identifier of the target device

`utilization`

Reference to an unsigned int for decoder utilization info

`samplingPeriodUs`

Reference to an unsigned int for the sampling period in US

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the Decoder

For Kepler architectures and newer

`nvmlReturn_t nvmlDeviceGetDefaultApplicationsClock`
(`nvmlDevice_t device`, `nvmlClockType_t clockType`,
`unsigned int *clockMHz`)

Parameters

`device`

The identifier of the target device

`clockType`

Identify which clock domain to query

`clockMHz`

Reference in which to return the default clock in MHz

Returns

- ▶ `NVML_SUCCESS` if `clockMHz` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `clockMHz` is `NULL` or `clockType` is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the default applications clock that GPU boots with or defaults to after `nvmlDeviceResetApplicationsClocks` call.

For Tesla products from the Kepler family.

See also:

`nvmlDeviceGetApplicationsClock`

`nvmlReturn_t nvmlDeviceGetDetailedEccErrors`
(`nvmlDevice_t device`, `nvmlMemoryErrorType_t`

errorType, nvmlEccCounterType_t counterType, nvmlEccErrorCounts_t *eccCounts)

Parameters

device

The identifier of the target device

errorType

Flag that specifies the type of the errors.

counterType

Flag that specifies the counter-type of the errors.

eccCounts

Reference in which to return the specified ECC errors

Returns

- ▶ NVML_SUCCESS if eccCounts has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, errorType or counterType is invalid, or eccCounts is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the detailed ECC error counts for the device.

Deprecated This API supports only a fixed set of ECC error locations. On different GPU architectures different locations are supported. See [nvmlDeviceGetMemoryErrorCounter](#)

For Tesla and Quadro products from the Fermi and Kepler families. Requires NVML_INFOROM_ECC version 2.0 or higher to report aggregate location-based ECC counts. Requires NVML_INFOROM_ECC version 1.0 or higher to report all other ECC counts. Requires ECC Mode to be enabled.

Detailed errors provide separate ECC counts for specific parts of the memory system.

Reports zero for unsupported ECC error counters when a subset of ECC error counters are supported.

See [nvmlMemoryErrorType_t](#) for a description of available bit types. See [nvmlEccCounterType_t](#) for a description of available counter types. See [nvmlEccErrorCounts_t](#) for a description of provided detailed ECC counts.

See also:

`nvmlDeviceClearEccErrorCounts()`

`nvmlReturn_t nvmlDeviceGetDisplayActive` (`nvmlDevice_t device`, `nvmlEnableState_t *isActive`)

Parameters

`device`

The identifier of the target device

`isActive`

Reference in which to return the display active state

Returns

- ▶ `NVML_SUCCESS` if `isActive` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `isActive` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the display active state for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

This method indicates whether a display is initialized on the device. For example whether X Server is attached to this device and has allocated memory for the screen.

Display can be active even when no monitor is physically attached.

See [nvmlEnableState_t](#) for details on allowed modes.

`nvmlReturn_t nvmlDeviceGetDisplayMode` (`nvmlDevice_t device`, `nvmlEnableState_t *display`)

Parameters

`device`

The identifier of the target device

`display`

Reference in which to return the display mode

Returns

- ▶ NVML_SUCCESS if display has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or display is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the display mode for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

This method indicates whether a physical display (e.g. monitor) is currently connected to any of the device's connectors.

See [nvmlEnableState_t](#) for details on allowed modes.

`nvmlReturn_t nvmlDeviceGetDriverModel (nvmlDevice_t device, nvmlDriverModel_t *current, nvmlDriverModel_t *pending)`

Parameters**device**

The identifier of the target device

current

Reference in which to return the current driver model

pending

Reference in which to return the pending driver model

Returns

- ▶ NVML_SUCCESS if either current and/or pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or both current and pending are NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the platform is not windows
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current and pending driver model for the device.

For Tesla and Quadro products from the Fermi and Kepler families. For windows only.

On Windows platforms the device driver can run in either WDDM or WDM (TCC) mode. If a display is attached to the device it must run in WDDM mode. TCC mode is preferred if a display is not attached.

See [nvmlDriverModel_t](#) for details on available driver models.

See also:

[nvmlDeviceSetDriverModel\(\)](#)

[nvmlReturn_t nvmlDeviceGetEccMode \(nvmlDevice_t device, nvmlEnableState_t *current, nvmlEnableState_t *pending\)](#)

Parameters**device**

The identifier of the target device

current

Reference in which to return the current ECC mode

pending

Reference in which to return the pending ECC mode

Returns

- ▶ NVML_SUCCESS if current and pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or either current or pending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current and pending ECC modes for the device.

For Tesla and Quadro products from the Fermi and Kepler families. Requires NVML_INFOROM_ECC version 1.0 or higher.

Changing ECC modes requires a reboot. The "pending" ECC mode refers to the target mode following the next reboot.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetEccMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetEncoderUtilization` (`nvmlDevice_t device`, `unsigned int *utilization`, `unsigned int *samplingPeriodUs`)

Parameters

device

The identifier of the target device

utilization

Reference to an unsigned int for encoder utilization info

samplingPeriodUs

Reference to an unsigned int for the sampling period in US

Returns

- ▶ `NVML_SUCCESS` if utilization has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, utilization is `NULL`, or `samplingPeriodUs` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the Encoder

For Kepler architectures and newer

`nvmlReturn_t nvmlDeviceGetEnforcedPowerLimit (nvmlDevice_t device, unsigned int *limit)`

Parameters

device

The device to communicate with

limit

Reference in which to return the power management limit in milliwatts

Returns

- ▶ `NVML_SUCCESS` if limit has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or limit is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Get the effective power limit that the driver enforces after taking into account all limiters

Note: This can be different from the `nvmlDeviceGetPowerManagementLimit` if other limits are set elsewhere This includes the out of band power limit interface

`nvmlReturn_t nvmlDeviceGetFanSpeed (nvmlDevice_t device, unsigned int *speed)`

Parameters

device

The identifier of the target device

speed

Reference in which to return the fan speed percentage

Returns

- ▶ `NVML_SUCCESS` if speed has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or speed is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not have a fan

- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the intended operating speed of the device's fan.

Note: The reported speed is the intended fan speed. If the fan is physically blocked and unable to spin, the output will not match the actual fan speed.

For all discrete products with dedicated fans.

The fan speed is expressed as a percent of the maximum, i.e. full speed is 100%.

```
nvmlReturn_t nvmlDeviceGetGpuOperationMode
(nvmlDevice_t device, nvmlGpuOperationMode_t
*current, nvmlGpuOperationMode_t *pending)
```

Parameters

device

The identifier of the target device

current

Reference in which to return the current GOM

pending

Reference in which to return the pending GOM

Returns

- ▶ `NVML_SUCCESS` if mode has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or current or pending is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current GOM and pending GOM (the one that GPU will switch to after reboot).

For GK110 M-class and X-class Tesla products from the Kepler family. Not supported on Quadro and Tesla C-class products.

See also:[nvmIgpuOperationMode_t](#)[nvmIdeviceSetGpuOperationMode](#)

nvmIreturn_t nvmIdeviceGetHandleByIndex (unsigned int index, nvmIdevice_t *device)

Parameters**index**

The index of the target GPU, ≥ 0 and $<$ accessibleDevices

device

Reference in which to return the device handle

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if index is invalid or device is NULL
- ▶ NVML_ERROR_INSUFFICIENT_POWER if any attached devices have improperly attached external power cables
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to talk to this device
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its index.

For all products.

Valid indices are derived from the accessibleDevices count returned by [nvmIdeviceGetCount\(\)](#). For example, if accessibleDevices is 2 the valid indices are 0 and 1, corresponding to GPU 0 and GPU 1.

The order in which NVML enumerates devices has no guarantees of consistency between reboots. For that reason it is recommended that devices be looked up by their PCI ids or UUID. See [nvmIdeviceGetHandleByUUID\(\)](#) and [nvmIdeviceGetHandleByPciBusId\(\)](#).

Note: The NVML index may not correlate with other APIs, such as the CUDA device index.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs if:

- ▶ The target GPU is an SLI slave

Note: New `nvmlDeviceGetCount_v2` (default in NVML 5.319) returns count of all devices in the system even if `nvmlDeviceGetHandleByIndex_v2` returns `NVML_ERROR_NO_PERMISSION` for such device. Update your code to handle this error, or use NVML 4.304 or older `nvml` header file. For backward binary compatibility reasons `_v1` version of the API is still present in the shared library. Old `_v1` version of `nvmlDeviceGetCount` doesn't count devices that NVML has no permission to talk to.

This means that `nvmlDeviceGetHandleByIndex_v2` and `_v1` can return different devices for the same index. If you don't touch macros that map old (`_v1`) versions to `_v2` versions at the top of the file you don't need to worry about that.

See also:

[nvmlDeviceGetIndex](#)

[nvmlDeviceGetCount](#)

`nvmlReturn_t nvmlDeviceGetHandleByPciBusId (const char *pciBusId, nvmlDevice_t *device)`

Parameters

pciBusId

The PCI bus id of the target GPU

device

Reference in which to return the device handle

Returns

- ▶ `NVML_SUCCESS` if device has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `pciBusId` is invalid or `device` is `NULL`
- ▶ `NVML_ERROR_NOT_FOUND` if `pciBusId` does not match a valid device on the system
- ▶ `NVML_ERROR_INSUFFICIENT_POWER` if the attached device has improperly attached external power cables
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to talk to this device

- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its PCI bus id.

For all products.

This value corresponds to the `nvmlPciInfo_t::busId` returned by `nvmlDeviceGetPciInfo()`.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs if:

- ▶ The target GPU is an SLI slave

NVML 4.304 and older version of `nvmlDeviceGetHandleByPciBusId_v1` returns NVML_ERROR_NOT_FOUND instead of NVML_ERROR_NO_PERMISSION.

`nvmlReturn_t nvmlDeviceGetHandleBySerial (const char *serial, nvmlDevice_t *device)`

Parameters

serial

The board serial number of the target GPU

device

Reference in which to return the device handle

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if serial is invalid, device is NULL or more than one device has the same serial (dual GPU boards)
- ▶ NVML_ERROR_NOT_FOUND if serial does not match a valid device on the system
- ▶ NVML_ERROR_INSUFFICIENT_POWER if any attached devices have improperly attached external power cables
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs

- ▶ `NVML_ERROR_GPU_IS_LOST` if any GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Acquire the handle for a particular device, based on its board serial number.

For all products.

This number corresponds to the value printed directly on the board, and to the value returned by `nvmlDeviceGetSerial()`.

Deprecated Since more than one GPU can exist on a single board this function is deprecated in favor of `nvmlDeviceGetHandleByUUID`. For dual GPU boards this function will return `NVML_ERROR_INVALID_ARGUMENT`.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs as it searches for the target GPU

See also:

`nvmlDeviceGetSerial`

`nvmlDeviceGetHandleByUUID`

`nvmlReturn_t nvmlDeviceGetHandleByUUID (const char *uuid, nvmlDevice_t *device)`

Parameters

uuid

The UUID of the target GPU

device

Reference in which to return the device handle

Returns

- ▶ `NVML_SUCCESS` if device has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if uuid is invalid or device is null
- ▶ `NVML_ERROR_NOT_FOUND` if uuid does not match a valid device on the system
- ▶ `NVML_ERROR_INSUFFICIENT_POWER` if any attached devices have improperly attached external power cables
- ▶ `NVML_ERROR_IRQ_ISSUE` if NVIDIA kernel detected an interrupt issue with the attached GPUs

- ▶ NVML_ERROR_GPU_IS_LOST if any GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its globally unique immutable UUID associated with each device.

For all products.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs as it searches for the target GPU

See also:

[nvmDeviceGetUUID](#)

`nvmReturn_t nvmDeviceGetIndex (nvmDevice_t device, unsigned int *index)`

Parameters

device

The identifier of the target device

index

Reference in which to return the NVML index of the device

Returns

- ▶ NVML_SUCCESS if index has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or index is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the NVML index of this device.

For all products.

Valid indices are derived from the `accessibleDevices` count returned by [nvmDeviceGetCount\(\)](#). For example, if `accessibleDevices` is 2 the valid indices are 0 and 1, corresponding to GPU 0 and GPU 1.

The order in which NVML enumerates devices has no guarantees of consistency between reboots. For that reason it is recommended that devices be looked up by their PCI ids or GPU UUID. See `nvmlDeviceGetHandleByPciBusId()` and `nvmlDeviceGetHandleByUUID()`.

Note: The NVML index may not correlate with other APIs, such as the CUDA device index.

See also:

`nvmlDeviceGetHandleByIndex()`

`nvmlDeviceGetCount()`

`nvmlReturn_t nvmlDeviceGetInforomConfigurationChecksum (nvmlDevice_t device, unsigned int *checksum)`

Parameters

device

The identifier of the target device

checksum

Reference in which to return the infoROM configuration checksum

Returns

- ▶ NVML_SUCCESS if checksum has been set
- ▶ NVML_ERROR_CORRUPTED_INFOROM if the device's checksum couldn't be retrieved due to infoROM corruption
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if checksum is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the checksum of the configuration stored in the device's infoROM.

For Tesla and Quadro products from the Fermi and Kepler families.

Can be used to make sure that two GPUs have the exact same configuration. Current checksum takes into account configuration stored in PWR and ECC infoROM objects.

Checksum can change between driver releases or when user changes configuration (e.g. disable/enable ECC)

`nvmlReturn_t nvmlDeviceGetInforomImageVersion` **(`nvmlDevice_t device`, `char *version`, `unsigned int length`)**

Parameters

device

The identifier of the target device

version

Reference in which to return the infoROM image version

length

The maximum allowed length of the string returned in version

Returns

- ▶ `NVML_SUCCESS` if version has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if version is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not have an infoROM
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the global infoROM image version

For Tesla and Quadro products from the Kepler family.

Image version just like VBIOS version uniquely describes the exact version of the infoROM flashed on the board in contrast to infoROM object version which is only an indicator of supported features. Version string will not exceed 16 characters in length (including the `NULL` terminator). See [`nvmlConstants::NVML_DEVICE_INFOTOM_VERSION_BUFFER_SIZE`](#).

See also:

[`nvmlDeviceGetInforomVersion`](#)

`nvmlReturn_t nvmlDeviceGetInforomVersion` (`nvmlDevice_t device`, `nvmlInforomObject_t object`, `char *version`, `unsigned int length`)

Parameters

device

The identifier of the target device

object

The target infoROM object

version

Reference in which to return the infoROM version

length

The maximum allowed length of the string returned in version

Returns

- ▶ `NVML_SUCCESS` if version has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if version is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not have an infoROM
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the version information for the device's infoROM object.

For Tesla and Quadro products from the Fermi and Kepler families.

Fermi and higher parts have non-volatile on-board memory for persisting device info, such as aggregate ECC counts. The version of the data structures in this memory may change from time to time. It will not exceed 16 characters in length (including the `NULL` terminator). See [nvmlConstants::NVML_DEVICE_INFOROM_VERSION_BUFFER_SIZE](#).

See [nvmlInforomObject_t](#) for details on the available infoROM objects.

See also:

[nvmlDeviceGetInforomImageVersion](#)

`nvmlReturn_t nvmlDeviceGetMaxClockInfo` (`nvmlDevice_t device`, `nvmlClockType_t type`, unsigned int *`clock`)

Parameters

device

The identifier of the target device

type

Identify which clock domain to query

clock

Reference in which to return the clock speed in MHz

Returns

- ▶ `NVML_SUCCESS` if clock has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or clock is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device cannot report the specified clock
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the maximum clock speeds for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

See `nvmlClockType_t` for details on available clock information.

On GPUs from Fermi family current P0 clocks (reported by `nvmlDeviceGetClockInfo`) can differ from max clocks by few MHz.

`nvmlReturn_t nvmlDeviceGetMaxPcieLinkGeneration` (`nvmlDevice_t device`, unsigned int *`maxLinkGen`)

Parameters

device

The identifier of the target device

maxLinkGen

Reference in which to return the max PCIe link generation

Returns

- ▶ NVML_SUCCESS if maxLinkGen has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or maxLinkGen is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum PCIe link generation possible with this device and system

I.E. for a generation 2 PCIe device attached to a generation 1 PCIe bus the max link generation this function will report is generation 1.

For Tesla and Quadro products from the Fermi and Kepler families.

nvmlReturn_t nvmlDeviceGetMaxPcieLinkWidth (nvmlDevice_t device, unsigned int *maxLinkWidth)

Parameters**device**

The identifier of the target device

maxLinkWidth

Reference in which to return the max PCIe link generation

Returns

- ▶ NVML_SUCCESS if maxLinkWidth has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or maxLinkWidth is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum PCIe link width possible with this device and system

I.E. for a device with a 16x PCIe bus width attached to a 8x PCIe system bus this function will report a max link width of 8.

For Tesla and Quadro products from the Fermi and Kepler families.

```
nvmlReturn_t nvmlDeviceGetMemoryErrorCounter
(nvmlDevice_t device, nvmlMemoryErrorType_t
errorType, nvmlEccCounterType_t counterType,
nvmlMemoryLocation_t locationType, unsigned long long
*count)
```

Parameters**device**

The identifier of the target device

errorType

Flag that specifies the type of error.

counterType

Flag that specifies the counter-type of the errors.

locationType

Specifies the location of the counter.

count

Reference in which to return the ECC counter

Returns

- ▶ NVML_SUCCESS if count has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, errorType, counterType or locationType is invalid, or count is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support ECC error reporting in the specified memory
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the requested memory error counter for the device.

For Tesla and Quadro products from the Fermi family. Requires NVML_INFOROM_ECC version 2.0 or higher to report aggregate location-based memory error counts. Requires NVML_INFOROM_ECC version 1.0 or higher to report all other memory error counts.

For all Tesla and Quadro products from the Kepler family.

Requires ECC Mode to be enabled.

See [nvmlMemoryErrorType_t](#) for a description of available memory error types.

See [nvmlEccCounterType_t](#) for a description of available counter types. See

[nvmlMemoryLocation_t](#) for a description of available counter locations.

nvmlReturn_t nvmlDeviceGetMemoryInfo (nvmlDevice_t device, nvmlMemory_t *memory)

Parameters

device

The identifier of the target device

memory

Reference in which to return the memory information

Returns

- ▶ NVML_SUCCESS if memory has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the amount of used, free and total memory available on the device, in bytes.

For all products.

Enabling ECC reduces the amount of total available memory, due to the extra required parity bits. Under WDDM most device memory is allocated and managed on startup by Windows.

Under Linux and Windows TCC, the reported amount of used memory is equal to the sum of memory allocated by all active channels on the device.

See [nvmlMemory_t](#) for details on available memory info.

`nvmlReturn_t nvmlDeviceGetMinorNumber` (`nvmlDevice_t device`, `unsigned int *minorNumber`)

Parameters

device

The identifier of the target device

minorNumber

Reference in which to return the minor number for the device

Returns

- ▶ `NVML_SUCCESS` if the minor number is successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or `minorNumber` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if this query is not supported by the device
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves minor number for the device. The minor number for the device is such that the Nvidia device node file for each GPU will have the form `/dev/nvidia[minor number]`.

For all the GPUs. Supported only for Linux

`nvmlReturn_t nvmlDeviceGetMultiGpuBoard` (`nvmlDevice_t device`, `unsigned int *multiGpuBool`)

Parameters

device

The identifier of the target device

multiGpuBool

Reference in which to return a zero or non-zero value to indicate whether the device is on a multi GPU board

Returns

- ▶ `NVML_SUCCESS` if `multiGpuBool` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or `multiGpuBool` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves whether the device is on a Multi-GPU Board Devices that are on multi-GPU boards will set `multiGpuBool` to a non-zero value.

For Tesla and Quadro products from the Fermi and Kepler families.

`nvmlReturn_t nvmlDeviceGetName (nvmlDevice_t device, char *name, unsigned int length)`

Parameters

device

The identifier of the target device

name

Reference in which to return the product name

length

The maximum allowed length of the string returned in name

Returns

- ▶ `NVML_SUCCESS` if name has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or name is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the name of this device.

For all products.

The name is an alphanumeric string that denotes a particular product, e.g. Tesla C2070. It will not exceed 64 characters in length (including the `NULL` terminator). See [nvmlConstants::NVML_DEVICE_NAME_BUFFER_SIZE](#).

`nvmlReturn_t nvmlDeviceGetPciInfo (nvmlDevice_t device, nvmlPciInfo_t *pci)`

Parameters

device

The identifier of the target device

pci

Reference in which to return the PCI info

Returns

- ▶ `NVML_SUCCESS` if pci has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or pci is NULL
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the PCI attributes of this device.

For all products.

See [nvmlPciInfo_t](#) for details on the available PCI info.

`nvmlReturn_t nvmlDeviceGetPerformanceState (nvmlDevice_t device, nvmlPstates_t *pState)`

Parameters

device

The identifier of the target device

pState

Reference in which to return the performance state reading

Returns

- ▶ `NVML_SUCCESS` if pState has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or pState is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature

- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current performance state for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

See [nvmlPstates_t](#) for details on allowed performance states.

`nvmlReturn_t nvmlDeviceGetPersistenceMode` (`nvmlDevice_t device`, `nvmlEnableState_t *mode`)

Parameters

`device`

The identifier of the target device

`mode`

Reference in which to return the current driver persistence mode

Returns

- ▶ `NVML_SUCCESS` if mode has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the persistence mode associated with this device.

For all CUDA-capable products. For Linux only.

When driver persistence mode is enabled the driver software state is not torn down when the last client disconnects. By default this feature is disabled.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetPersistenceMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetPowerManagementDefaultLimit (nvmlDevice_t device, unsigned int *defaultLimit)`

Parameters

device

The identifier of the target device

defaultLimit

Reference in which to return the default power management limit in milliwatts

Returns

- ▶ `NVML_SUCCESS` if `defaultLimit` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or `defaultLimit` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves default power management limit on this device, in milliwatts. Default power management limit is a power management limit that the device boots with.

For Tesla and Quadro products from the Kepler family.

`nvmlReturn_t nvmlDeviceGetPowerManagementLimit (nvmlDevice_t device, unsigned int *limit)`

Parameters

device

The identifier of the target device

limit

Reference in which to return the power management limit in milliwatts

Returns

- ▶ `NVML_SUCCESS` if `limit` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or limit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the power management limit associated with this device.

For "GF11x" Tesla and Quadro products from the Fermi family.

- ▶ Requires NVML_INFOROM_POWER version 3.0 or higher.

For Tesla and Quadro products from the Kepler family.

- ▶ Does not require NVML_INFOROM_POWER object.

The power limit defines the upper boundary for the card's power draw. If the card's total power draw reaches this limit the power management algorithm kicks in.

This reading is only available if power management mode is supported. See [nvmlDeviceGetPowerManagementMode](#).

`nvmlReturn_t` `nvmlDeviceGetPowerManagementLimitConstraints` (`nvmlDevice_t` device, unsigned int *minLimit, unsigned int *maxLimit)

Parameters

device

The identifier of the target device

minLimit

Reference in which to return the minimum power management limit in milliwatts

maxLimit

Reference in which to return the maximum power management limit in milliwatts

Returns

- ▶ NVML_SUCCESS if minLimit and maxLimit have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or minLimit or maxLimit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature

- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about possible values of power management limits on this device. For Tesla and Quadro products from the Kepler family.

See also:

[nvmlDeviceSetPowerManagementLimit](#)

`nvmlReturn_t nvmlDeviceGetPowerManagementMode(nvmlDevice_t device, nvmlEnableState_t *mode)`

Parameters

device

The identifier of the target device

mode

Reference in which to return the current power management mode

Returns

- ▶ NVML_SUCCESS if mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the power management mode associated with this device.

For "GF11x" Tesla and Quadro products from the Fermi family.

- ▶ Requires NVML_INFOROM_POWER version 3.0 or higher.

For Tesla and Quadro products from the Kepler family.

- ▶ Does not require NVML_INFOROM_POWER object.

This flag indicates whether any power management algorithm is currently active on the device. An enabled state does not necessarily mean the device is being actively throttled -- only that the driver will do so if the appropriate conditions are met.

See [nvmlEnableState_t](#) for details on allowed modes.

nvmlReturn_t nvmlDeviceGetPowerState (nvmlDevice_t device, nvmlPstates_t *pState)

Parameters

device

The identifier of the target device

pState

Reference in which to return the performance state reading

Returns

- ▶ NVML_SUCCESS if pState has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pState is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated: Use [nvmlDeviceGetPerformanceState](#). This function exposes an incorrect generalization.

Retrieve the current performance state for the device.

For Tesla and Quadro products from the Fermi and Kepler families.

See [nvmlPstates_t](#) for details on allowed performance states.

nvmlReturn_t nvmlDeviceGetPowerUsage (nvmlDevice_t device, unsigned int *power)

Parameters

device

The identifier of the target device

power

Reference in which to return the power usage information

Returns

- ▶ NVML_SUCCESS if power has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or power is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support power readings
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves power usage for this GPU in milliwatts and its associated circuitry (e.g. memory)

For "GF11x" Tesla and Quadro products from the Fermi family.

- ▶ Requires NVML_INFOROM_POWER version 3.0 or higher.

For Tesla and Quadro products from the Kepler family.

- ▶ Does not require NVML_INFOROM_POWER object.

On Fermi and Kepler GPUs the reading is accurate to within +/- 5% of current power draw.

It is only available if power management mode is supported. See [nvmlDeviceGetPowerManagementMode](#).

`nvmlReturn_t nvmlDeviceGetRetiredPages`
(`nvmlDevice_t device`, `nvmlPageRetirementCause_t cause`, `unsigned int *pageCount`, `unsigned long long *addresses`)

Parameters**device**

The identifier of the target device

cause

Filter page addresses by cause of retirement

pageCount

Reference in which to provide the addresses buffer size, and to return the number of retired pages that match cause Set to 0 to query the size without allocating an addresses buffer

addresses

Buffer to write the page addresses into

Returns

- ▶ NVML_SUCCESS if pageCount was populated and addresses was filled
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if pageCount indicates the buffer is not large enough to store all the matching page addresses. pageCount is set to the needed size.
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, pageCount is NULL, cause is invalid, or addresses is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the list of retired pages by source, including pages that are pending retirement The address information provided from this API is the hardware address of the page that was retired. Note that this does not match the virtual address used in CUDA, but will match the address information in XID 63

For Tesla K20 products

nvmlReturn_t nvmlDeviceGetRetiredPagesPendingStatus (nvmlDevice_t device, nvmlEnableState_t *isPending)

Parameters**device**

The identifier of the target device

isPending

Reference in which to return the pending status

Returns

- ▶ NVML_SUCCESS if isPending was populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or isPending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Check if any pages are pending retirement and need a reboot to fully retire.

For Tesla K20 products

```
nvmlReturn_t nvmlDeviceGetSamples (nvmlDevice_t
device, nvmlSamplingType_t type, unsigned long long
lastSeenTimeStamp, nvmlValueType_t *sampleValType,
unsigned int *sampleCount, nvmlSample_t *samples)
```

Parameters

device

The identifier for the target device

type

Type of sampling event

lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

sampleValType

Output parameter to represent the type of sample value as described in nvmlSampleVal_t

sampleCount

Reference to provide the number of elements which can be queried in samples array

samples

Reference in which samples are returned

Returns

- ▶ NVML_SUCCESS if samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, sampleCount is NULL or reference to sampleCount is 0 for non null samples
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_FOUND if sample entries are not found

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Gets recent samples for the GPU.

For Tesla GRID ® and Quadro products from the Kepler family.

Based on type, this method can be used to fetch the power, utilization or clock samples maintained in the buffer by the driver.

Power, Utilization and Clock samples are returned as type "unsigned int" for the union `nvmlValue_t`.

To get the size of samples that user needs to allocate, the method is invoked with `samples` set to NULL. The returned `samplesCount` will provide the number of samples that can be queried. The user needs to allocate the buffer with size as `samplesCount * sizeof(nvmlSample_t)`.

`lastSeenTimeStamp` represents CPU timestamp in microseconds. Set it to 0 to fetch all the samples maintained by the underlying buffer. Set `lastSeenTimeStamp` to one of the `timeStamps` retrieved from the date of the previous query to get more recent samples.

This method fetches the number of entries which can be accommodated in the provided `samples` array, and the reference `samplesCount` is updated to indicate how many samples were actually retrieved. The advantage of using this method for samples in contrast to polling via existing methods is to get higher frequency data at lower polling cost.

`nvmlReturn_t nvmlDeviceGetSerial (nvmlDevice_t device, char *serial, unsigned int length)`

Parameters

device

The identifier of the target device

serial

Reference in which to return the board/module serial number

length

The maximum allowed length of the string returned in `serial`

Returns

- ▶ NVML_SUCCESS if `serial` has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if `device` is invalid, or `serial` is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if `length` is too small

- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the globally unique board serial number associated with this device's board.

For Tesla and Quadro products from the Fermi and Kepler families.

The serial number is an alphanumeric string that will not exceed 30 characters (including the NULL terminator). This number matches the serial number tag that is physically attached to the board. See `nvmlConstants::NVML_DEVICE_SERIAL_BUFFER_SIZE`.

`nvmlReturn_t` `nvmlDeviceGetSupportedClocksThrottleReasons` (`nvmlDevice_t` device, unsigned long long *supportedClocksThrottleReasons)

Parameters

`device`

The identifier of the target device

`supportedClocksThrottleReasons`

Reference in which to return bitmask of supported clocks throttle reasons

Returns

- ▶ `NVML_SUCCESS` if `supportedClocksThrottleReasons` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or `supportedClocksThrottleReasons` is NULL
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves bitmask of supported clocks throttle reasons that can be returned by `nvmlDeviceGetCurrentClocksThrottleReasons`

For all devices

See also:[NvmlClocksThrottleReasons](#)[nvmlDeviceGetCurrentClocksThrottleReasons](#)

`nvmlReturn_t nvmlDeviceGetSupportedGraphicsClocks`
**(`nvmlDevice_t` device, unsigned int memoryClockMHz,
 unsigned int *count, unsigned int *clocksMHz)**

Parameters**device**

The identifier of the target device

memoryClockMHz

Memory clock for which to return possible graphics clocks

count

Reference in which to provide the clocksMHz array size, and to return the number of elements

clocksMHz

Reference in which to return the clocks in MHz

Returns

- ▶ NVML_SUCCESS if count and clocksMHz have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_FOUND if the specified memoryClockMHz is not a supported frequency
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clock is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if count is too small
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the list of possible graphics clocks that can be used as an argument for [nvmlDeviceSetApplicationsClocks](#).

For Tesla products and Quadro products from the Kepler family.

See also:[nvmlDeviceSetApplicationsClocks](#)

[nvmlDeviceGetSupportedMemoryClocks](#)

`nvmlReturn_t nvmlDeviceGetSupportedMemoryClocks`
(`nvmlDevice_t device`, unsigned int *`count`, unsigned int *`clocksMHz`)

Parameters

device

The identifier of the target device

count

Reference in which to provide the `clocksMHz` array size, and to return the number of elements

clocksMHz

Reference in which to return the clock in MHz

Returns

- ▶ `NVML_SUCCESS` if `count` and `clocksMHz` have been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `count` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if `count` is too small (`count` is set to the number of required elements)
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the list of possible memory clocks that can be used as an argument for [nvmlDeviceSetApplicationsClocks](#).

For Tesla products from the Kepler family.

See also:

[nvmlDeviceSetApplicationsClocks](#)

[nvmlDeviceGetSupportedGraphicsClocks](#)

`nvmlReturn_t nvmlDeviceGetTemperature` (`nvmlDevice_t device`, `nvmlTemperatureSensors_t sensorType`, `unsigned int *temp`)

Parameters

device

The identifier of the target device

sensorType

Flag that indicates which sensor reading to retrieve

temp

Reference in which to return the temperature reading

Returns

- ▶ `NVML_SUCCESS` if temp has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, sensorType is invalid or temp is NULL
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not have the specified sensor
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current temperature readings for the device, in degrees C.

For all discrete and S-class products.

See [nvmlTemperatureSensors_t](#) for details on available temperature sensors.

`nvmlReturn_t nvmlDeviceGetTemperatureThreshold` (`nvmlDevice_t device`, `nvmlTemperatureThresholds_t thresholdType`, `unsigned int *temp`)

Parameters

device

The identifier of the target device

thresholdType

The type of threshold value queried

temp

Reference in which to return the temperature reading

Returns

- ▶ NVML_SUCCESS if temp has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, thresholdType is invalid or temp is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a temperature sensor or is unsupported
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the temperature threshold for the GPU with the specified threshold type in degrees C.

For all fully supported products from Kepler or higher families

See [nvmlTemperatureThresholds_t](#) for details on available temperature thresholds.

`nvmlReturn_t nvmlDeviceGetTotalEccErrors`
`(nvmlDevice_t device, nvmlMemoryErrorType_t`
`errorType, nvmlEccCounterType_t counterType,`
`unsigned long long *eccCounts)`

Parameters**device**

The identifier of the target device

errorType

Flag that specifies the type of the errors.

counterType

Flag that specifies the counter-type of the errors.

eccCounts

Reference in which to return the specified ECC errors

Returns

- ▶ NVML_SUCCESS if eccCounts has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device, `errorType` or `counterType` is invalid, or `eccCounts` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the total ECC error counts for the device.

For Tesla and Quadro products from the Fermi and Kepler families. Requires `NVML_INFOROM_ECC` version 1.0 or higher. Requires ECC Mode to be enabled.

The total error count is the sum of errors across each of the separate memory systems, i.e. the total set of errors across the entire device.

See [nvmlMemoryErrorType_t](#) for a description of available error types. See [nvmlEccCounterType_t](#) for a description of available counter types.

See also:

[nvmlDeviceClearEccErrorCounts\(\)](#)

`nvmlReturn_t nvmlDeviceGetUtilizationRates` (`nvmlDevice_t device`, `nvmlUtilization_t *utilization`)

Parameters

device

The identifier of the target device

utilization

Reference in which to return the utilization information

Returns

- ▶ `NVML_SUCCESS` if utilization has been populated
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or utilization is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the current utilization rates for the device's major subsystems.

For Tesla and Quadro products from the Fermi and Kepler families.

See [nvmlUtilization_t](#) for details on available utilization rates.

During driver initialization when ECC is enabled one can see high GPU and Memory Utilization readings. This is caused by ECC Memory Scrubbing mechanism that is performed during driver initialization.

`nvmlReturn_t nvmlDeviceGetUUID (nvmlDevice_t device, char *uuid, unsigned int length)`

Parameters

device

The identifier of the target device

uuid

Reference in which to return the GPU UUID

length

The maximum allowed length of the string returned in uuid

Returns

- ▶ `NVML_SUCCESS` if uuid has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or uuid is NULL
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the globally unique immutable UUID associated with this device, as a 5 part hexadecimal string, that augments the immutable, board serial identifier.

For all CUDA capable GPUs.

The UUID is a globally unique identifier. It is the only available identifier for pre-Fermi-architecture products. It does NOT correspond to any identifier printed on the

board. It will not exceed 80 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_UUID_BUFFER_SIZE](#).

nvmlReturn_t nvmlDeviceGetVbiosVersion (nvmlDevice_t device, char *version, unsigned int length)

Parameters

device

The identifier of the target device

version

Reference to which to return the VBIOS version

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get VBIOS version of the device.

For all products.

The VBIOS version may change from time to time. It will not exceed 32 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_VBIOS_VERSION_BUFFER_SIZE](#).

nvmlReturn_t nvmlDeviceGetViolationStatus (nvmlDevice_t device, nvmlPerfPolicyType_t perfPolicyType, nvmlViolationTime_t *violTime)

Parameters

device

The identifier of the target device

perfPolicyType

Represents Performance policy which can trigger GPU throttling

violTime

Reference to which violation time related information is returned

Returns

- ▶ NVML_SUCCESS if violation time is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, perfPolicyType is invalid, or violTime is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the duration of time during which the device was throttled (lower than requested clocks) due to power or thermal constraints.

The method is important to users who are trying to understand if their GPUs throttle at any point during their applications. The difference in violation times at two different reference times gives the indication of GPU throttling event.

Violation for thermal capping is not supported at this time.

For Tesla products from the Kepler+ family.

nvmlReturn_t nvmlDeviceOnSameBoard (nvmlDevice_t device1, nvmlDevice_t device2, int *onSameBoard)

Parameters**device1**

The first GPU device

device2

The second GPU device

onSameBoard

Reference in which to return the status. Non-zero indicates that the GPUs are on the same board.

Returns

- ▶ NVML_SUCCESS if onSameBoard has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if dev1 or dev2 are invalid or onSameBoard is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this check is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the either GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Check if the GPU devices are on the same physical board.

`nvmlReturn_t nvmlDeviceResetApplicationsClocks` (`nvmlDevice_t device`)

Parameters

`device`

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Resets the application clock to the default value

This is the applications clock that will be used after system reboot or driver reload. Default value is constant, but the current value can be changed using [nvmlDeviceSetApplicationsClocks](#).

See also:

[nvmlDeviceGetApplicationsClock](#)

[nvmlDeviceSetApplicationsClocks](#)

For Tesla products from the Kepler family.

`nvmlReturn_t nvmlDeviceSetAutoBoostedClocksEnabled (nvmlDevice_t device, nvmlEnableState_t enabled)`

Parameters

device

The identifier of the target device

enabled

What state to try to set auto boosted clocks of the target device to

Returns

- ▶ `NVML_SUCCESS` If the auto boosted clocks were successfully set to the state specified by `enabled`
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support auto boosted clocks
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Try to set the current state of auto boosted clocks on a device.

For Tesla products of Kepler or newer

Auto boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow. Auto boosted clocks should be disabled if fixed clock rates are desired. For non-root users, the user must be first allowed to use this API with `nvmlDeviceSetAPIRestriction`, with `apiType=NVML_RESTRICTED_API_SET_AUTO_BOOSTED_CLOCKS`.

`nvmlReturn_t nvmlDeviceSetCpuAffinity (nvmlDevice_t device)`

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if the calling process has been successfully bound
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Sets the ideal affinity for a device using the guidelines given in [nvmlDeviceGetCpuAffinity\(\)](#) Currently supports up to 64 processors.

For Kepler or newer devices. Supported on Linux only.

nvmlReturn_t nvmlDeviceSetDefaultAutoBoostedClocksEnabled (nvmlDevice_t device, nvmlEnableState_t enabled, unsigned int flags)

Parameters**device**

The identifier of the target device

enabled

What state to try to set default auto boosted clocks of the target device to

flags

Flags that change the default behavior. `nvmlFlagForce` will make the current auto boost mode the new default mode immediately rather than waiting for no compute processes to be running.

Returns

- ▶ NVML_SUCCESS If the auto boosted clock's default state was successfully set to the state specified by `enabled`
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NO_PERMISSION If the calling user does not have permission to change auto boosted clock's default state.
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support auto boosted clocks

- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Try to set the default state of auto boosted clocks on a device. This is the default state that auto boosted clocks will return to when no compute running processes (e.g. CUDA application which have an active context) are running

For Tesla products of Kepler or newer Requires root/admin permissions.

Auto boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow. Auto boosted clocks should be disabled if fixed clock rates are desired.

`nvmlReturn_t nvmlDeviceValidateInforom (nvmlDevice_t device)`

Parameters

`device`

The identifier of the target device

Returns

- ▶ `NVML_SUCCESS` if infoROM is not corrupted
- ▶ `NVML_ERROR_CORRUPTED_INFOROM` if the device's infoROM is corrupted
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Reads the infoROM from the flash and verifies the checksums.

For Tesla and Quadro products from the Fermi and Kepler families.

4.11. Unit Commands

This chapter describes NVML operations that change the state of the unit. For S-class products. Each of these requires root/admin access. Non-admin users will see an NVML_ERROR_NO_PERMISSION error code when invoking any of these methods.

`nvmlReturn_t nvmlUnitSetLedState (nvmlUnit_t unit, nvmlLedColor_t color)`

Parameters

unit

The identifier of the target unit

color

The target LED color

Returns

- ▶ NVML_SUCCESS if the LED color has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit or color is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the LED state for the unit. The LED can be either green (0) or amber (1).

For S-class products. Requires root/admin permissions.

This operation takes effect immediately.

Current S-Class products don't provide unique LEDs for each unit. As such, both front and back LEDs will be toggled in unison regardless of which unit is specified with this command.

See `nvmlLedColor_t` for available colors.

See also:

`nvmlUnitGetLedState()`

4.12. Device Commands

This chapter describes NVML operations that change the state of the device. Each of these requires root/admin access. Non-admin users will see an `NVML_ERROR_NO_PERMISSION` error code when invoking any of these methods.

`nvmlReturn_t nvmlDeviceClearEccErrorCounts` (`nvmlDevice_t device`, `nvmlEccCounterType_t counterType`)

Parameters

`device`

The identifier of the target device

`counterType`

Flag that indicates which type of errors should be cleared.

Returns

- ▶ `NVML_SUCCESS` if the error counts were cleared
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `counterType` is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Clear the ECC error and other memory error counts for the device.

For Tesla and Quadro products from the Fermi and Kepler families. Requires `NVML_INFOROM_ECC` version 2.0 or higher to clear aggregate location-based ECC counts. Requires `NVML_INFOROM_ECC` version 1.0 or higher to clear all other ECC counts. Requires root/admin permissions. Requires ECC Mode to be enabled.

Sets all of the specified ECC counters to 0, including both detailed and total counts.

This operation takes effect immediately.

See `nvmlMemoryErrorType_t` for details on available counter types.

See also:

- ▶ `nvmlDeviceGetDetailedEccErrors()`
- ▶ `nvmlDeviceGetTotalEccErrors()`

`nvmlReturn_t nvmlDeviceSetAPIRestriction` (`nvmlDevice_t device`, `nvmlRestrictedAPI_t apiType`, `nvmlEnableState_t isRestricted`)

Parameters**device**

The identifier of the target device

apiType

Target API type for this operation

isRestricted

The target restriction

Returns

- ▶ `NVML_SUCCESS` if `isRestricted` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid or `apiType` incorrect
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support changing API restrictions or the device does not support the feature that `api` restrictions are being set for (E.G. Enabling/disabling auto boosted clocks is not supported by the device)
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Changes the root/admin restrictions on certain APIs. See `nvmlRestrictedAPI_t` for the list of supported APIs. This method can be used by a root/admin user to give non-root/admin access to certain otherwise-restricted APIs. The new setting lasts for the lifetime of the NVIDIA driver; it is not persistent. See `nvmlDeviceGetAPIRestriction` to query the current restriction settings.

For Tesla and Quadro &tm products from the Kepler+ family. Requires root/admin permissions.

See also:[nvmRestrictedAPI_t](#)

nvmReturn_t nvmDeviceSetApplicationsClocks (**nvmDevice_t** device, unsigned int memClockMHz, unsigned int graphicsClockMHz)

Parameters**device**

The identifier of the target device

memClockMHz

Requested memory clock in MHz

graphicsClockMHz

Requested graphics clock in MHz

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memClockMHz and graphicsClockMHz is not a valid clock combination
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set clocks that applications will lock to.

Sets the clocks that compute and graphics applications will be running at. e.g. CUDA driver requests these clocks during context creation which means this property defines clocks at which CUDA applications will be running unless some overspec event occurs (e.g. over power, over thermal or external HW brake).

Can be used as a setting to request constant performance.

For Tesla products from the Kepler family. Requires root/admin permissions.

See [nvmDeviceGetSupportedMemoryClocks](#) and [nvmDeviceGetSupportedGraphicsClocks](#) for details on how to list available clocks combinations.

After system reboot or driver reload applications clocks go back to their default value. See [nvmlDeviceResetApplicationsClocks](#).

`nvmlReturn_t nvmlDeviceSetComputeMode` (`nvmlDevice_t device`, `nvmlComputeMode_t mode`)

Parameters

device

The identifier of the target device

mode

The target compute mode

Returns

- ▶ `NVML_SUCCESS` if the compute mode was set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Set the compute mode for the device.

For all CUDA-capable products. Requires root/admin permissions.

The compute mode determines whether a GPU can be used for compute operations and whether it can be shared across contexts.

This operation takes effect immediately. Under Linux it is not persistent across reboots and always resets to "Default". Under windows it is persistent.

Under windows compute mode may only be set to `DEFAULT` when running in WDDM

See [nvmlComputeMode_t](#) for details on available compute modes.

See also:

[nvmlDeviceGetComputeMode\(\)](#)

`nvmlReturn_t nvmlDeviceSetDriverModel (nvmlDevice_t device, nvmlDriverModel_t driverModel, unsigned int flags)`

Parameters

device

The identifier of the target device

driverModel

The target driver model

flags

Flags that change the default behavior

Returns

- ▶ `NVML_SUCCESS` if the driver model has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or driverModel is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the platform is not windows or the device does not support this feature
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Set the driver model for the device.

For Tesla and Quadro products from the Fermi and Kepler families. For windows only. Requires root/admin permissions.

On Windows platforms the device driver can run in either WDDM or WDM (TCC) mode. If a display is attached to the device it must run in WDDM mode.

It is possible to force the change to WDM (TCC) while the display is still attached with a force flag (`nvmlFlagForce`). This should only be done if the host is subsequently powered down and the display is detached from the device before the next reboot.

This operation takes effect after the next reboot.

Windows driver model may only be set to WDDM when running in DEFAULT compute mode.

Change driver model to WDDM is not supported when GPU doesn't support graphics acceleration or will not support it after reboot. See [nvmlDeviceSetGpuOperationMode](#).

See [nvmlDriverModel_t](#) for details on available driver models. See [nvmlFlagDefault](#) and [nvmlFlagForce](#)

See also:

[nvmlDeviceGetDriverModel\(\)](#)

[nvmlReturn_t nvmlDeviceSetEccMode \(nvmlDevice_t device, nvmlEnableState_t ecc\)](#)

Parameters

device

The identifier of the target device

ecc

The target ECC mode

Returns

- ▶ NVML_SUCCESS if the ECC mode was set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or ecc is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the ECC mode for the device.

For Tesla and Quadro products from the Fermi and Kepler families. Requires NVML_INFOROM_ECC version 1.0 or higher. Requires root/admin permissions.

The ECC mode determines whether the GPU enables its ECC support.

This operation takes effect after the next reboot.

See [nvmlEnableState_t](#) for details on available modes.

See also:

`nvmlDeviceGetEccMode()`

`nvmlReturn_t nvmlDeviceSetGpuOperationMode` (`nvmlDevice_t device`, `nvmlGpuOperationMode_t mode`)

Parameters

device

The identifier of the target device

mode

Target GOM

Returns

- ▶ `NVML_SUCCESS` if mode has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode incorrect
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support GOM or specific mode
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Sets new GOM. See `nvmlGpuOperationMode_t` for details.

For GK110 M-class and X-class Tesla products from the Kepler family. Not supported on Quadro and Tesla C-class products. Requires root/admin permissions.

Changing GOMs requires a reboot. The reboot requirement might be removed in the future.

Compute only GOMs don't support graphics acceleration. Under windows switching to these GOMs when pending driver model is WDDM is not supported. See `nvmlDeviceSetDriverModel`.

See also:

`nvmlGpuOperationMode_t`

`nvmlDeviceGetGpuOperationMode`

`nvmlReturn_t nvmlDeviceSetPersistenceMode` (`nvmlDevice_t device, nvmlEnableState_t mode`)

Parameters

device

The identifier of the target device

mode

The target persistence mode

Returns

- ▶ `NVML_SUCCESS` if the persistence mode was set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or mode is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_NO_PERMISSION` if the user doesn't have permission to perform this operation
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Set the persistence mode for the device.

For all CUDA-capable products. For Linux only. Requires root/admin permissions.

The persistence mode determines whether the GPU driver software is torn down after the last client exits.

This operation takes effect immediately. It is not persistent across reboots. After each reboot the persistence mode is reset to "Disabled".

See [nvmlEnableState_t](#) for available modes.

See also:

[nvmlDeviceGetPersistenceMode\(\)](#)

`nvmlReturn_t nvmlDeviceSetPowerManagementLimit` (`nvmlDevice_t device`, unsigned int limit)

Parameters

device

The identifier of the target device

limit

Power management limit in milliwatts to set

Returns

- ▶ `NVML_SUCCESS` if limit has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or defaultLimit is out of range
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Set new power limit of this device.

For Tesla and Quadro products from the Kepler family. Requires root/admin permissions.

See [nvmlDeviceGetPowerManagementLimitConstraints](#) to check the allowed ranges of values.

Limit is not persistent across reboots or driver unloads. Enable persistent mode to prevent driver from unloading when no application is using the device.

See also:

[nvmlDeviceGetPowerManagementLimitConstraints](#)

[nvmlDeviceGetPowerManagementDefaultLimit](#)

4.13. Event Handling Methods

This chapter describes methods that NVML can perform against each device to register and wait for some event to occur.

```
struct nvmlEventData_t
```

Event Types

```
typedef struct nvmlEventSet_st *nvmlEventSet_t
```

Handle to an event set

```
nvmlReturn_t nvmlDeviceGetSupportedEventTypes  
(nvmlDevice_t device, unsigned long long *eventTypes)
```

Parameters

device

The identifier of the target device

eventTypes

Reference in which to return bitmask of supported events

Returns

- ▶ NVML_SUCCESS if the eventTypes has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if eventType is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns information about events supported on device

For all products.

Events are not supported on Windows. So this function returns an empty mask in eventTypes on Windows.

See also:

Event Types

`nvmlDeviceRegisterEvents`

`nvmlReturn_t nvmlDeviceRegisterEvents (nvmlDevice_t device, unsigned long long eventTypes, nvmlEventSet_t set)`

Parameters

device

The identifier of the target device

eventTypes

Bitmask of [Event Types](#) to record

set

Set to which add new event types

Returns

- ▶ `NVML_SUCCESS` if the event has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `eventTypes` is invalid or `set` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the platform does not support this feature or some of requested event types
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Starts recording of events on a specified devices and add the events to specified `nvmlEventSet_t`

For Tesla and Quadro products from the Fermi and Kepler families. Ecc events are available only on ECC enabled devices (see `nvmlDeviceGetTotalEccErrors`) Power capping events are available only on Power Management enabled devices (see `nvmlDeviceGetPowerManagementMode`)

For Linux only.

IMPORTANT: Operations on `set` are not thread safe

This call starts recording of events on specific device. All events that occurred before this call are not recorded. Checking if some event occurred can be done with `nvmlEventSetWait`

If function reports `NVML_ERROR_UNKNOWN`, event set is in undefined state and should be freed. If function reports `NVML_ERROR_NOT_SUPPORTED`, event set can still be used. None of the requested eventTypes are registered in that case.

See also:

[Event Types](#)

[nvmlDeviceGetSupportedEventTypes](#)

[nvmlEventSetWait](#)

[nvmlEventSetFree](#)

`nvmlReturn_t nvmlEventSetCreate (nvmlEventSet_t *set)`

Parameters

`set`

Reference in which to return the event handle

Returns

- ▶ `NVML_SUCCESS` if the event has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if set is NULL
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Create an empty set of events. Event set should be freed by [nvmlEventSetFree](#)

See also:

[nvmlEventSetFree](#)

`nvmlReturn_t nvmlEventSetFree (nvmlEventSet_t set)`

Parameters

`set`

Reference to events to be released

Returns

- ▶ NVML_SUCCESS if the event has been successfully released
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Releases events in the set

For Tesla and Quadro products from the Fermi and Kepler families.

See also:

[nvmlDeviceRegisterEvents](#)

`nvmlReturn_t nvmlEventSetWait (nvmlEventSet_t set, nvmlEventData_t *data, unsigned int timeoutms)`

Parameters**set**

Reference to set of events to wait on

data

Reference in which to return event data

timeoutms

Maximum amount of wait time in milliseconds for registered event

Returns

- ▶ NVML_SUCCESS if the data has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if data is NULL
- ▶ NVML_ERROR_TIMEOUT if no event arrived in specified timeout or interrupt arrived
- ▶ NVML_ERROR_GPU_IS_LOST if a GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Waits on events and delivers events

For Tesla and Quadro products from the Fermi and Kepler families.

If some events are ready to be delivered at the time of the call, function returns immediately. If there are no events ready to be delivered, function sleeps till event

arrives but not longer than specified timeout. This function in certain conditions can return before specified timeout passes (e.g. when interrupt arrives)

In case of xid error, the function returns the most recent xid error type seen by the system. If there are multiple xid errors generated before `nvmlEventSetWait` is invoked then the last seen xid error type is returned for all xid error events.

See also:

[Event Types](#)

[nvmlDeviceRegisterEvents](#)

4.13.1. Event Types

Event Handling Methods

Event Types which user can be notified about. See description of particular functions for details.

See [nvmlDeviceRegisterEvents](#) and [nvmlDeviceGetSupportedEventTypes](#) to check which devices support each event.

Types can be combined with bitwise or operator '|' when passed to [nvmlDeviceRegisterEvents](#)

```
#define nvmlEventTypeAll (nvmlEventTypeNone
\ | nvmlEventTypeSingleBitEccError \ |
nvmlEventTypeDoubleBitEccError \ | nvmlEventTypePState \ |
nvmlEventTypeClock \ | nvmlEventTypeXidCriticalError \ )
```

Mask of all events.

```
#define nvmlEventTypeClock 0x0000000000000010LL
```

Event about clock changes.

Kepler only

```
#define nvmlEventTypeDoubleBitEccError 0x0000000000000002LL
```

Event about double bit ECC errors.

An uncorrected texture memory error is not an ECC error, so it does not generate a double bit event

```
#define nvmlEventTypeNone 0x0000000000000000LL
```

Mask with no events.

```
#define nvmlEventTypePState 0x0000000000000004LL
```

Event about PState changes.

On Fermi architecture PState changes are also an indicator that GPU is throttling down due to no work being executed on the GPU, power capping or thermal capping. In a typical situation, Fermi-based GPU should stay in P0 for the duration of the execution of the compute process.

```
#define nvmlEventTypeSingleBitEccError 0x0000000000000001LL
```

Event about single bit ECC errors.

A corrected texture memory error is not an ECC error, so it does not generate a single bit event

```
#define nvmlEventTypeXidCriticalError 0x0000000000000008LL
```

Event that Xid critical error occurred.

4.14. NvmlClocksThrottleReasons

```
#define nvmlClocksThrottleReasonAll
(nvmlClocksThrottleReasonNone \ |
nvmlClocksThrottleReasonGpudle \ |
nvmlClocksThrottleReasonApplicationsClocksSetting
\ | nvmlClocksThrottleReasonSwPowerCap \
| nvmlClocksThrottleReasonHwSlowdown \ |
nvmlClocksThrottleReasonUnknown \ )
```

Bit mask representing all supported clocks throttling reasons New reasons might be added to this list in the future

```
#define
nvmcClocksThrottleReasonApplicationsClocksSetting
0x0000000000000002LL
```

GPU clocks are limited by current setting of applications clocks

See also:

`nvmcDeviceSetApplicationsClocks`

`nvmcDeviceGetApplicationsClock`

```
#define nvmcClocksThrottleReasonGpuIdle
0x0000000000000001LL
```

Nothing is running on the GPU and the clocks are dropping to Idle state

This limiter may be removed in a later release

```
#define nvmcClocksThrottleReasonHwSlowdown
0x0000000000000008LL
```

HW Slowdown (reducing the core clocks by a factor of 2 or more) is engaged

This is an indicator of:

- ▶ temperature being too high
- ▶ External Power Brake Assertion is triggered (e.g. by the system power supply)
- ▶ Power draw is too high and Fast Trigger protection is reducing the clocks
- ▶ May be also reported during PState or clock change
 - ▶ This behavior may be removed in a later release.

See also:

`nvmcDeviceGetTemperature`

`nvmcDeviceGetTemperatureThreshold`

`nvmcDeviceGetPowerUsage`

```
#define nvmlClocksThrottleReasonNone  
0x0000000000000000LL
```

Bit mask representing no clocks throttling

Clocks are as high as possible.

```
#define nvmlClocksThrottleReasonSwPowerCap  
0x0000000000000004LL
```

SW Power Scaling algorithm is reducing the clocks below requested clocks

See also:

`nvmlDeviceGetPowerUsage`

`nvmlDeviceSetPowerManagementLimit`

`nvmlDeviceGetPowerManagementLimit`

```
#define nvmlClocksThrottleReasonUnknown  
0x8000000000000000LL
```

Some other unspecified factor is reducing the clocks

```
#define nvmlClocksThrottleReasonUserDefinedClocks  
nvmlClocksThrottleReasonApplicationsClocksSetting
```

Deprecated Renamed to `nvmlClocksThrottleReasonApplicationsClocksSetting` as the name describes the situation more accurately.

Chapter 5.

DATA STRUCTURES

Here are the data structures with brief descriptions:

- `nvmlAccountingStats_t`
- `nvmlBAR1Memory_t`
- `nvmlBridgeChipHierarchy_t`

5.1. `nvmlAccountingStats_t` Struct Reference

Describes accounting statistics of a process.

unsigned int nvmlAccountingStats_t::gpuUtilization

Description

Percent of time over the process's lifetime during which one or more kernels was executing on the GPU. Utilization stats just like returned by [nvmlDeviceGetUtilizationRates](#) but for the life time of a process (not just the last sample period). Set to NVML_VALUE_NOT_AVAILABLE if [nvmlDeviceGetUtilizationRates](#) is not supported

unsigned long long nvmlAccountingStats_t::maxMemoryUsage

Description

Maximum total memory in bytes that was ever allocated by the process. Set to NVML_VALUE_NOT_AVAILABLE if [nvmlProcessInfo_t->usedGpuMemory](#) is not supported

unsigned int nvmlAccountingStats_t::memoryUtilization

Description

Percent of time over the process's lifetime during which global (device) memory was being read or written. Set to NVML_VALUE_NOT_AVAILABLE if [nvmlDeviceGetUtilizationRates](#) is not supported

unsigned long long nvmlAccountingStats_t::time

Amount of time in ms during which the compute context was active.

5.2. nvmlBAR1Memory_t Struct Reference

BAR1 Memory allocation Information for a device

unsigned long long nvmlBAR1Memory_t::bar1Free

Unallocated BAR1 Memory (in bytes).

unsigned long long nvmlBAR1Memory_t::bar1Total

Total BAR1 Memory (in bytes).

unsigned long long nvmlBAR1Memory_t::bar1Used

Allocated Used Memory (in bytes).

5.3. nvmlBridgeChipHierarchy_t Struct Reference

This structure stores the complete Hierarchy of the Bridge Chip within the board. The immediate bridge is stored at index 0 of bridgeInfoList, parent to immediate bridge is at index 1 and so forth.

struct nvmlBridgeChipInfo_t
nvmlBridgeChipHierarchy_t::bridgeChipInfo

Hierarchy of Bridge Chips on the board.

unsigned char nvmlBridgeChipHierarchy_t::bridgeCount

Number of Bridge Chips on the Board.

5.4. nvmlBridgeChipInfo_t Struct Reference

Information about the Bridge Chip Firmware

unsigned int nvmlBridgeChipInfo_t::fwVersion

Firmware Version. 0=Version is unavailable.

nvmlBridgeChipType_t nvmlBridgeChipInfo_t::type

Type of Bridge Chip.

5.5. nvmlEccErrorCounts_t Struct Reference

Detailed ECC error counts for a device.

Deprecated Different GPU families can have different memory error counters See [nvmlDeviceGetMemoryErrorCounter](#)

**unsigned long long
nvmEccErrorCounts_t::deviceMemory**

Device memory errors.

unsigned long long nvmEccErrorCounts_t::l1Cache

L1 cache errors.

unsigned long long nvmEccErrorCounts_t::l2Cache

L2 cache errors.

unsigned long long nvmEccErrorCounts_t::registerFile

Register file errors.

5.6. nvmEventData_t Struct Reference

Information about occurred event

nvmDevice_t nvmEventData_t::device

Specific device where the event occurred.

unsigned long long nvmEventData_t::eventData

Stores last XID error for the device in the event of nvmEventTypeXidCriticalError,.

unsigned long long nvmEventData_t::eventType

Information about what specific event occurred.

5.7. nvmHwbcEntry_t Struct Reference

Description of HWBC entry

5.8. nvmLedState_t Struct Reference

LED states for an S-class unit.

`char nvmlLedState_t::cause`

If amber, a text description of the cause.

`nvmlLedColor_t nvmlLedState_t::color`

GREEN or AMBER.

5.9. `nvmlMemory_t` Struct Reference

Memory allocation information for a device.

`unsigned long long nvmlMemory_t::free`

Unallocated FB memory (in bytes).

`unsigned long long nvmlMemory_t::total`

Total installed FB memory (in bytes).

`unsigned long long nvmlMemory_t::used`

Allocated FB memory (in bytes). Note that the driver/GPU always sets aside a small amount of memory for bookkeeping.

5.10. `nvmlPciInfo_t` Struct Reference

PCI information about a GPU device.

unsigned int nvmlPciInfo_t::bus

The bus on which the device resides, 0 to 0xff.

char nvmlPciInfo_t::busId

The tuple domain:bus:device.function PCI identifier (& NULL terminator).

unsigned int nvmlPciInfo_t::device

The device's id on the bus, 0 to 31.

unsigned int nvmlPciInfo_t::domain

The PCI domain on which the device's bus resides, 0 to 0xffff.

unsigned int nvmlPciInfo_t::pciDeviceId

The combined 16-bit device id and 16-bit vendor id.

unsigned int nvmlPciInfo_t::pciSubSystemId

The 32-bit Sub System Device ID.

5.11. nvmlProcessInfo_t Struct Reference

Information about running compute processes on the GPU

unsigned int nvmlProcessInfo_t::pid

Process ID.

unsigned long long nvmlProcessInfo_t::usedGpuMemory

Description

Amount of used GPU memory in bytes. Under WDDM, `NVML_VALUE_NOT_AVAILABLE` is always reported because Windows KMD manages all the memory and not the NVIDIA driver

5.12. nvmlPSUInfo_t Struct Reference

Power usage information for an S-class unit. The power supply state is a human readable string that equals "Normal" or contains a combination of "Abnormal" plus one or more of the following:

- ▶ High voltage

- ▶ Fan failure
- ▶ Heatsink temperature
- ▶ Current limit
- ▶ Voltage below UV alarm threshold
- ▶ Low-voltage
- ▶ I2C remote off command
- ▶ MOD_DISABLE input
- ▶ Short pin transition

`unsigned int nvmlPSUInfo_t::current`

PSU current (A).

`unsigned int nvmlPSUInfo_t::power`

PSU power draw (W).

`char nvmlPSUInfo_t::state`

The power supply state.

`unsigned int nvmlPSUInfo_t::voltage`

PSU voltage (V).

5.13. `nvmlSample_t` Struct Reference

Information for Sample

`nvmlSample_t::sampleValue`

Sample Value.

`unsigned long long nvmlSample_t::timeStamp`

CPU Timestamp in microseconds.

5.14. `nvmlUnitFanInfo_t` Struct Reference

Fan speed reading for a single fan in an S-class unit.

unsigned int nvmlUnitFanInfo_t::speed

Fan speed (RPM).

nvmlFanState_t nvmlUnitFanInfo_t::state

Flag that indicates whether fan is working properly.

5.15. nvmlUnitFanSpeeds_t Struct Reference

Fan speed readings for an entire S-class unit.

unsigned int nvmlUnitFanSpeeds_t::count

Number of fans in unit.

struct nvmlUnitFanInfo_t nvmlUnitFanSpeeds_t::fans

Fan speed data for each fan.

5.16. nvmlUnitInfo_t Struct Reference

Static S-class unit info.

char nvmlUnitInfo_t::firmwareVersion

Firmware version.

char nvmlUnitInfo_t::id

Product identifier.

char nvmlUnitInfo_t::name

Product name.

char nvmlUnitInfo_t::serial

Product serial number.

5.17. nvmlUtilization_t Struct Reference

Utilization information for a device. Each sample period may be between 1 second and 1/6 second, depending on the product being queried.

`unsigned int nvmlUtilization_t::gpu`

Percent of time over the past sample period during which one or more kernels was executing on the GPU.

`unsigned int nvmlUtilization_t::memory`

Percent of time over the past sample period during which global (device) memory was being read or written.

5.18. `nvmlValue_t` Union Reference

Union to represent different types of Value

`double nvmlValue_t::dVal`

If the value is double.

`unsigned int nvmlValue_t::uiVal`

If the value is unsigned int.

`unsigned long long nvmlValue_t::ullVal`

If the value is unsigned long long.

`unsignedlong nvmlValue_t::ulVal`

If the value is unsigned long.

5.19. `nvmlViolationTime_t` Struct Reference

Struct to hold perf policy violation status data

`unsigned long long nvmlViolationTime_t::referenceTime`

`referenceTime` represents CPU timestamp in microseconds

`unsigned long long nvmlViolationTime_t::violationTime`

`violationTime` in Nanoseconds

Chapter 6.

DATA FIELDS

Here is a list of all documented struct and union fields with links to the struct/union documentation for each field:

DEPRECATED LIST

Class `nvmlEccErrorCounts_t`

Different GPU families can have different memory error counters See `nvmlDeviceGetMemoryErrorCounter`

Global `NVML_DOUBLE_BIT_ECC`

Mapped to `NVML_MEMORY_ERROR_TYPE_UNCORRECTED`

Global `NVML_SINGLE_BIT_ECC`

Mapped to `NVML_MEMORY_ERROR_TYPE_CORRECTED`

Global `nvmlEccBitType_t`

See `nvmlMemoryErrorType_t` for a more flexible type

Global `nvmlDeviceGetDetailedEccErrors`

This API supports only a fixed set of ECC error locations On different GPU architectures different locations are supported See `nvmlDeviceGetMemoryErrorCounter`

Global `nvmlDeviceGetHandleBySerial`

Since more than one GPU can exist on a single board this function is deprecated in favor of `nvmlDeviceGetHandleByUUID`. For dual GPU boards this function will return `NVML_ERROR_INVALID_ARGUMENT`.

Global `nvmClocksThrottleReasonUserDefinedClocks`

Renamed to `nvmClocksThrottleReasonApplicationsClocksSetting` as the name describes the situation more accurately.
